PowerFlex® 700 Adjustable Frequency AC Drives

PowerFlex® 700 Adjustable Frequency AC Drives Technical Data

The PowerFlex 700 AC drive offers outstanding performance in an easy-to-use drive that you have come to expect from Rockwell Automation. This world-class performance comes in a small and competitively priced package. The PowerFlex 700 AC drive is designed to control three-phase induction motors in applications with requirements ranging from the simplest speed control to the most demanding torque control. Two configurations are available: Standard Control which includes volts per hertz and sensorless vector control; and Vector Control which includes volts per hertz, sensorless vector and vector control. The Vector Control option includes Allen-Bradley's patented Force Technology™ which provides world class motor control.

Product Overview

Standard Drives Program

Flexible Packaging and Mounting

- **IP20, Type 1** — For conventional mounting inside or outside a control cabinet. Conduit plate is removable for easy installation and replacement without disturbing conduit.
- **Zero Stacking™** — Drives can be mounted next to each other with no reduction of surrounding air temperature rating (50°C). This unique bookshelf design also allows access to one drive without disturbing another.

Space Saving Hardware Features

- **Integral EMC Filtering** plus built-in common mode cores and common mode capacitors provides a compact, all-in-one package solution for meeting EMC requirements, including CE in Europe.
- **Internal Communications** allow the user to integrate the drive into the manufacturing process. Status indicators for all internal communication options are visible on the cover for easy setup and monitoring of drive communications. Users can easily manage information from shop floor to top floor and seamlessly integrate their complete system as they control, configure and collect data.
- **Integral Dynamic Brake Transistor** delivers a cost effective means of switching regenerative energy without costly external chopper circuits.
- **Internal Dynamic Brake Resistor** (up to 25 HP) requires no extra panel space, and supplies a large amount of braking torque for short periods.

Easy to Use Human Interface Tools

The PowerFlex 7-Class AC drives provide common Human Interface tools that are familiar and easy to use. These include the LCD Human Interface modules and PC-based configuration tools.

LCD Human Interface modules provide:

- Large and easy to read 7 line x 21 character backlit display
- Variety of languages (English, French, German, Italian, Spanish, Portuguese, Dutch)
- Alternate function keys for shortcuts to common tasks
- “Calculator-like” number pad for fast and easy data entry (Full Numeric version only)
- Control keys for local start, stop, speed, and direction
- Remote versions for panel mount application

PC-based Configuration tools include:

- DriveExplorer™ and DriveExplorer Lite
 - A simple and flexible “On-line” tool for monitoring and configuration while connected to a drive.
- DriveTools™ SP
 - A suite of software tools which provide an intuitive means for programming, troubleshooting and maintaining Allen-Bradley AC & DC drives.

Product Overview

Standard Drives Program, Cont'd

Outstanding Control and Performance

Allen-Bradley drive's Vector Control utilizes patented Force Technology which provides excellent low-speed performance - whether it is operated with or without feedback. While this industry-leading control provides the highest level of drive performance, it is as easy to use as any general purpose drive available. **Multiple motor control** algorithms allow performance matched to the application need:

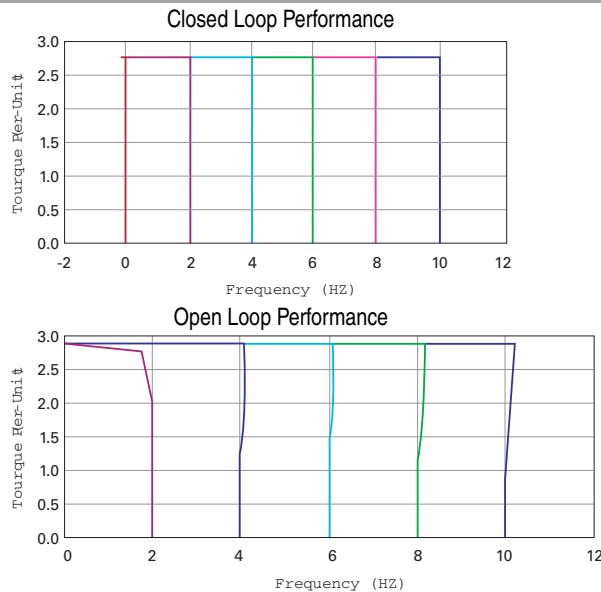

- **Volts/Hertz** for simple Fan and Pump applications
- **Sensorless Vector** for high torque production over a wide speed range
- **Vector** for outstanding torque regulation and excellent low speed / zero speed performance (with Vector control cassette).

Drives Features

- Fast-acting **Current Limit** and **Bus Voltage Regulation** result in maximum acceleration and deceleration without tripping.
- **High speed analog inputs** improve drive response to torque or speed commands.
- **Programming flexibility** allows parameters to be linked within the drive.
- **Flying Start** delivers smooth connection into rotating loads, regardless of commanded direction, without the need for any speed feedback.
- **Integral Process PI Control** can eliminate the need for a separate process loop controller.
- **Intertia Ride-Through** offers tripless operation during a prolonged power outage by using the rotating energy stored in high inertia, low-friction loads.
- Speed Regulation as required:
 - **Open Loop Frequency** regulation when speed regulation is not required.
 - **Slip Compensation** delivers a minimum .5% speed regulation without feedback hardware.
 - **Droop** allows drives to load share without fighting each other.
 - **Encoder Feedback** provides up to .001% speed regulation for the tightest application requirements.

Unsurpassed Capability in Network Communications

PowerFlex drives are fully compatible with the wide variety of Allen-Bradley DPI™ communication adapters, offering the following benefits:

DeviceNet™	ControlNet™	EtherNet/IP	Remote I/O	RS-485 - DF1	Profibus	Interbus - S	Description
✓	✓	✓					(Unconnected Messaging) permits other network devices (e.g. PanelView™) to communicate directly to a drive without routing the communication through the network scanner.
✓	✓	✓		✓			Adapter Routing - Plug PC into one drive and talk to all other Allen-Bradley drives on same network, without being routed through network scanner.
✓	✓	✓	✓	✓	✓	✓	Access to 100% of all parameters over the network.
✓		✓			✓		AutoBaud capability makes initial connections less problematic.
✓							Change of State significantly reduces network traffic by configuring control messages to be sent only upon customer defined states. Very flexible configuration for each node (Example: "reference must change by more than 5%").
✓		✓					Peer Control provides master-slave type control between drives, where one or more slave drives (consumers) can run based on the status of a master drive (producer), which can also significantly reduce network traffic.
✓							ADR (Automatic Device Replacement) saves significant time and effort when replacing a drive, by allowing the scanner to be configured to automatically detect a new drive and download the required parameter settings.
✓	✓	✓	✓	✓	✓	✓	Flexible Fault Configuration - Adapters can be programmed to take fault based actions as ramp to stop, coast-to-stop and hold last state, as well as send user configurable logic control and speed reference values. In addition, different actions can be taken based on whether the network experienced a serious problem (broken cable etc.) versus network idle condition (PLC set to "Program").

(1) Not available for Frame 3 drives or larger.

(2) Brake IGBT is standard on Frames 0-3 and optional on Frames 4-6.

(3) Note: CE Certification testing has not been performed on 600V class drives.

(4) Frames 5 & 6 Only.

(5) Vector Control Option utilizes DPI Only.

Product Selection Guide

Option Selection, Cont'd

Position 13 — EMC Filter

Position 13 identifies the presence of the internal EMC filter (meets second environment CE standards) and provides the option of noise reducing common mode cores. Cores are standard on all drives below 100 HP.

Note: CE certification testing has not been performed on 600V class drives.

Terminator

Description ①	Used with	Catalog Number (Loose Kit)
IP65 (NEMA Type4x) Connection Cable Included	0.37-1.5 kW (0.5-2HP) 460V Drives 0.75-597 kW (1-800 HP) 575V Drives	1204-TFA1
	1.5-597 kW (2-800 HP) 460V Drives 0.75-597 kW (1-800 HP) 575 Drives	1204-TFB2

- ① Correct terminator selection is dependent on motor characteristics, cable type and cable length. Refer to publication 1204-1.0 for application details before ordering.

Standard Packaged Drives

PowerFlex® 700 Standard Packaged Drives

Product Description

PowerFlex 700 Standard Packaged Drives are ideal for global Original Equipment Manufacturers (OEM) and end users with special installation needs. This program simplifies installation and start-up by allowing users to order drive packages that combine operator interface, control, communications and power options in pre-configured assemblies. Designed to meet customer demands for space savings, application flexibility and reliability, Standard Packaged PowerFlex 700 AC drives offer a number of commonly requested pre-engineered options, as well as more complex custom-engineered packages.

Benefits

- Simplified installation and start-up by use of common options assembled at the factory.
- Drive functionality exceeds options offered with a standard drive.
- Multiple packaging options specific to customer needs.
- Pre-engineered options for easy order entry, consistent manufacturing, high quality and reduced deliveries.
- Selectable configurations to meet application requirements.

Features

- Standard PowerFlex 700 AC drives and drive-related options.
- Six pulse and multi-pulse.
- Enclosure options: Type 1, Type 12 (fan and filter or convection/AC), and Type 4 (indoor).
- Pre-engineered options.
- Custom/engineered solutions.
- UL panel recognition from the factory for pre-engineered options.

**Please contact your local distributor or sales office for product availability.
Standard Packaged Drives offers Quick Ship and pre-engineered programs.**

Standard Packaged Drives

Quick Ship Program

Standard Features Include:

- Top of frame 480V PowerFlex 700 Drive (Frames 0-3)
- NEMA Type 1 Enclosure (IP20) — position 8 -A
- Full Numeric LCD HIM - Door Mounted — position 9 -6
- Standard Drive User Manual — position 10 -A
- With Brake IGBT (Frames 0-3) — position 11 -Y
- No Brake Resistor — position 12 -N
- Filter with Common Mode Choke — position 13 -A
- No Communication Module — position 14 -N
- Standard 115V AC I/O — position 15 -B
- No Feedback — position 16 -O
- Quick Ship Option — positions 19 & 20 -QS
- Normal Duty -ND
- No Bypass -BO
- Drive Fault Control Relay -J2
- Drive Run Control Relay -J4
- 115V AC Control Power Transformer -CI
- Fused Disconnect Switch -P6
- Hand/Off/Auto Selector Switch -S1
- Drive Fault Pilot Light -S10
- Control Power On Pilot Light -S13
- Drive Run Pilot Light -S9

Custom/OEM Specific Package Program

- Meets customer-specific specifications
- All voltage ratings are available

The Allen-Bradley Standard Packaged Drives Program allows users to order PowerFlex 700 drive packages that exceed the options offered with a standard drive product. Users can choose from an option list that includes control, power, packaging and documentation to meet unique application demands. The program provides different physical pre-engineered package sizes based upon environmental and option mounting requirements.

Installation Considerations

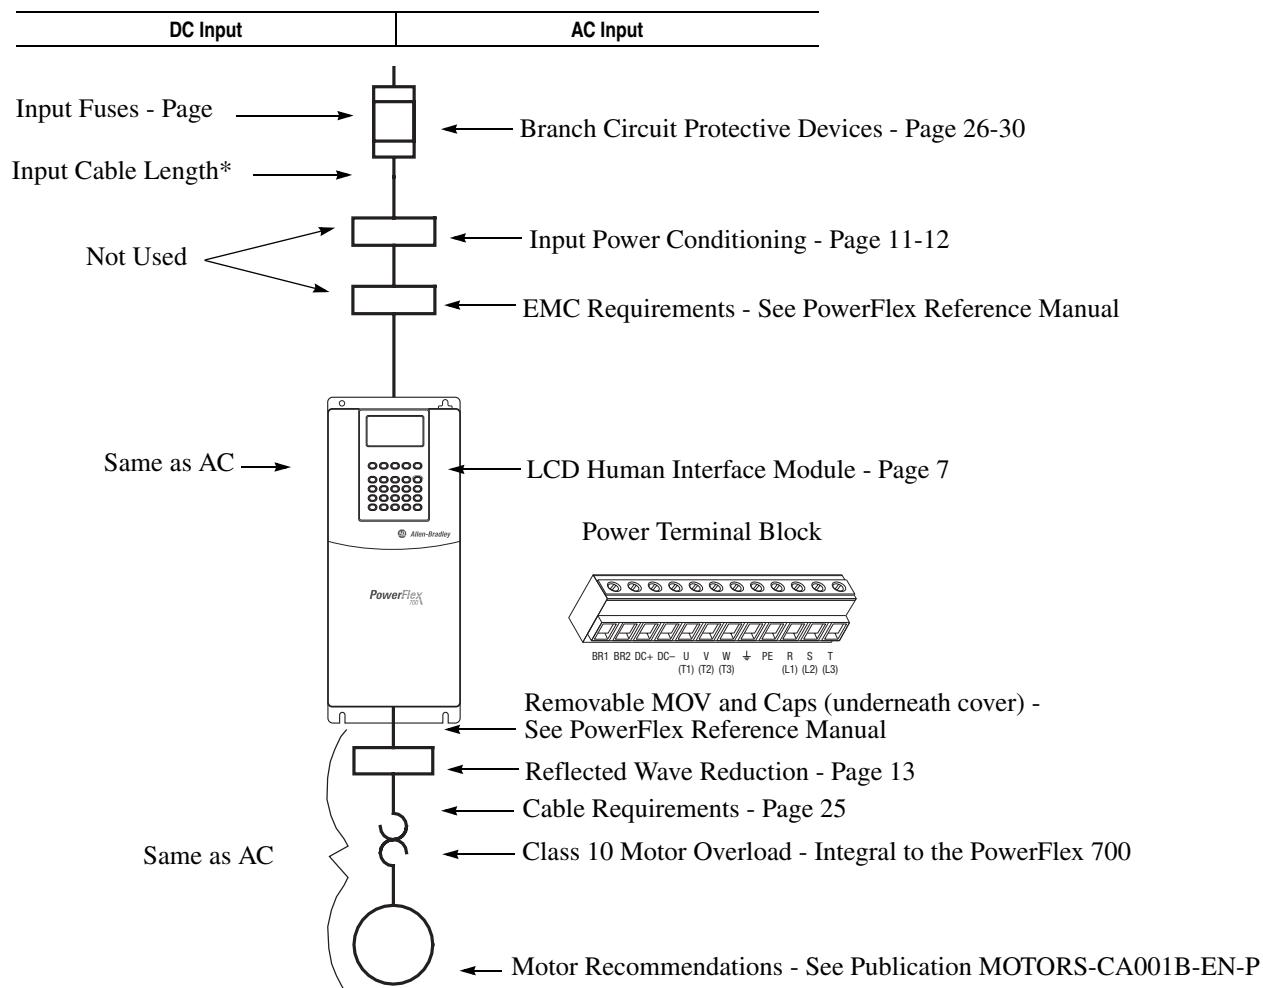

Power Wiring

The PowerFlex 700 has the following built in protective features to help simplify installation:

- Ground fault protection during start up and running ensures reliable operation
- Electronic motor overload protection increases motor life
- Removable MOV to ground and common mode capacitors to ground ensure compatibility with ungrounded systems
- 6 kV transient protection provides increased robustness for 380-480V system voltages

There are many other factors that must be considered for optimal performance in any given application. The block diagram below highlights the primary installation considerations. Consult the *PowerFlex Reference Manual* available online at www.ab.com/manuals/dr, for detailed recommendations on input power conditioning, CE conformance (EMC filtering), dynamic braking, reflected wave protection, motor cable types and motor cable distances.

The block diagram below also provides direction on other installation issues and concerns.

* Input Cable Length is limited. See Publication 20B-UM001x-EN-P for further details.

Installation Considerations

3-Wire Control External supply (I/O Board dependent). Requires 3-wire functions only ([Digital In1 Sel]). Using 2-wire selections will cause a type 2 alarm.		² No Changes Required
Digital Output Relays shown in powered state with drive faulted. See pages 20 & 21. <u>Standard Control</u> 1 relay at terminals 14-16. <u>Vector Control</u> 2 relays at terminals 14-16.		² Select Source to Activate: Parameters 380/384
Enable Input		² <u>Standard Control</u> Configure with parameter 366 ² <u>Vector Control</u> Configure with parameter 366 For dedicated hardware Enable: Remove Jumper J10 (see page 20)

Notes:

- (1) Refer to *PowerFlex 700 User Manual* for more information on bipolar wiring.
 (2) **Important:** Programming inputs for 2 wire control deactivates all HIM Start buttons.

2

Specifications

Cable Recommendations

Cable Types Acceptable for 200-600 Volt Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 meters (1 foot) for every 10 meters (32.8 feet) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than or equal to 15 mils (0.4mm/0.015 in.). See table below.

Unshielded

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. **Do not use THHN or similarly coated wire in wet areas.** Any wire chosen must have a minimum insulation thickness of 15 Mils and should not have large variations in insulation concentricity.

Shielded/Armored Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications/ networking are also good candidates for shielded cable.

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to *Reflected Wave* in "Wiring and Grounding Guidelines for PWM AC Drives," publication DRIVES-IN001.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables twist 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Location	Rating/Type	Description
Standard (Option 1)	600V, 90° C (194° F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	<ul style="list-style-type: none">Four tinned copper conductors with XLP insulation.Copper braid/aluminum foil combination shield and tinned copper drain wire.PVC jacket.

Notes:

- (1) Minimum protection device size is the lowest rated device that supplies maximum protection without nuisance tripping.
- (2) Maximum protection device size is the highest rated device that supplies drive protection. For US NEC, minimum size is 125% of motor FLA. Ratings shown are maximum.
- (3) Circuit Breaker - inverse time breaker. For US NEC, minimum size is 125% of motor FLA. Ratings shown are maximum.
- (4) Motor Circuit Protector - instantaneous trip circuit breaker. For US NEC minimum size is 125% of motor FLA. Ratings shown are maximum.
- (5) Bulletin 140M with adjustable current range should have the current trip set to the minimum range that the device will not trip.
- (6) Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 208 Y/277 or 600Y/347. Not UL listed for use on 480V or 600V Delta/Delta systems.
- (7) The AIC ratings of the Bulletin 140M Motor Protector may vary. See publication 140M-SG001B-EN-P.
- (8) 20BC085 current rating is limited to 45 °C surrounding air.
- (9) 20BC205 current rating is limited to 40 °C surrounding air.
- (10) Maximum allowable rating by US NEC. Exact size must be chosen for each installation.

(1) Cable is Alcatel C1202 or equivalent. Shielded cable with twisted conductors and no filler.

(2) Cable is Belden 295xx series or equivalent.

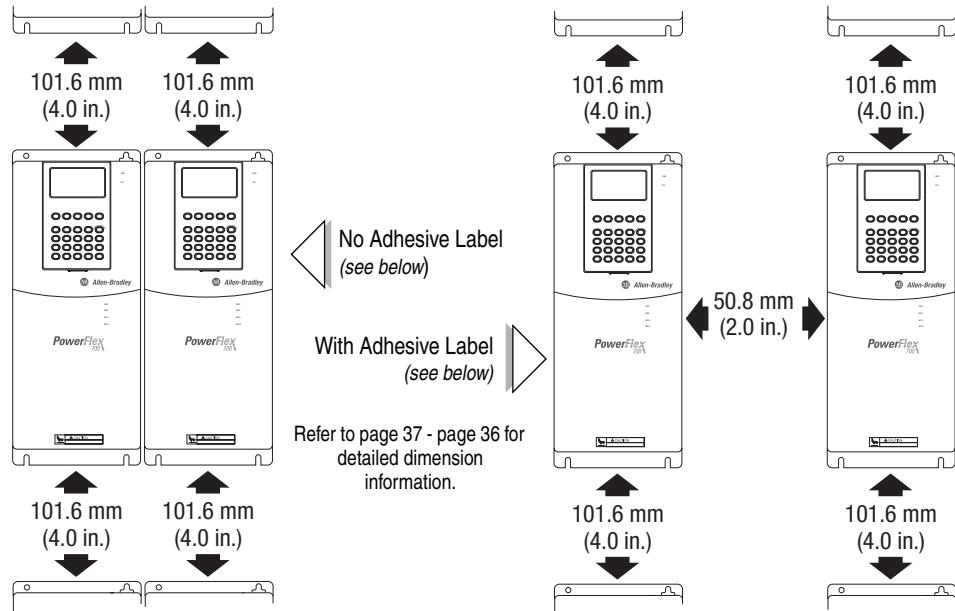

Notes:

-1000V motor is defined as one assembled without phase paper. 1200V motor is defined as one assembled with phase paper. 1488V motor meets NEMA MG 1-1998 section 31 standard where the insulation can withstand voltage spikes of 3.1 x rated motor voltage due to inverter operation (inverter duty motor). 1600V motor is a 1329R or 1329L. Operation at nominal line voltage. To increase the distance between the drive and the motor, some mitigation device needs to be added to the system (i.e. an RWR or Terminator).

-NA = Data Not Available at time of publication.

Specifications

Mounting

Operating Temperatures

PowerFlex 700 drives are designed to operate at 0° to 40° C surrounding air. To operate the drive in installations between 41° and 50° C, refer to the table below.

	Bus Undervoltage Shutoff/Fault:	153VDC	153VDC	305VDC	305VDC	381VDC	
	Nominal Bus Voltage:	281VDC	324VDC	540VDC	648VDC	810VDC	
	All Drives						
	Heat Sink Thermistor:	Monitored by microprocessor overtemp trip					
	Drive Overcurrent Trip	200% of rated current (typical)					
	Software Overcurrent Trip:	220-300% of rated current (dependent on drive rating)					
	Hardware Overcurrent Trip:						
	Line transients:	up to 6000 volts peak per IEEE C62.41-1991					
	Control Logic Noise Immunity:	Showering arc transients up to 1500V peak					
	Power Ride-Thru:	15 milliseconds at full load					
	Logic Control Ride-Thru:	0.5 seconds minimum, 2 seconds typical					
	Ground Fault Trip:	Phase-to-ground on drive output					
	Short Circuit Trip:	Phase-to-phase on drive output					
Environment	Altitude:	1000 m (3300 ft) max. without derating					
	Maximum Surrounding Air Temperature without Derating:						
	IP20, NEMA Type 1:	0 to 50° C (32 to 122° F)					
	IP56, NEMA Type 4X	0 to 50° C (32 to 122° F)					
	Storage Temperature (all const.):	-40 to 70° C (-40 to 158° F)					
	Atmosphere	Important: Drive must not be installed in an area where the surrounding air atmosphere contains volatile or corrosive gas, vapors or dust. If the drive is not going to be installed for a period of time, it must be stored in an area where it will not be exposed to a corrosive atmosphere.					
	Relative Humidity:	5 to 95% non-condensing					
	Shock:	15G peak for 11ms duration (± 1.0 ms)					
	Vibration:	0.152 mm (0.006 in.) displacement, 1G peak					
Agency Certification	The drive is designed to meet the following specifications: NFPA 70 - US National Electrical Code NEMA ICS 3.1 - Safety standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems. NEMA 250 - Enclosures for Electrical Equipment IEC 146 - International Electrical Code.						
		UL and cUL Listed to UL508C and CAN/CSA-C2.2 No. 14-M91					
		Marked for all applicable European Directives (1) EMC Directive (89/336/EEC) Emissions EN 61800-3 Adjustable Speed electrical power drive systems Part 3 Immunity EN 61800-3 Second Environment, Restricted Distribution Low Voltage Directive (73/23/EEC) EN 50178 Electronic Equipment for use in Power Installations					
Electrical	Voltage Tolerance:	See page 41 for Full Power and Operating Range.					
	Frequency Tolerance:	47-63 Hz.					
	Input Phases:	Three-phase input provides full rating for all drives. Single-phase operation provides 50% of rated current.					
	Displacement Power Factor	0.98 across speed range.					
	Efficiency:	97.5% at rated amps, nominal line volts.					
	Max. Short Circuit Current Rating: Using Recommended Fuse or Circuit Breaker Type	Maximum short circuit current rating to match specified fuse/circuit breaker capability.					

Specifications

Category	Specification	
Control	Method: Carrier Frequency Output Voltage Range: Output Frequency Range: Frequency Accuracy Digital Input: Analog Input:	Sine coded PWM with programmable carrier frequency. Ratings apply to all drives. The drive can be supplied as 6 pulse or 12 pulse in a configured package. 2, 4, 8 & 10 kHz. Drive rating based on 4 kHz 0 to rated motor voltage Standard Control – 0 to 400 Hz., Vector Control – 0 to 420 Hz. Within $\pm 0.01\%$ of set output frequency. Within $\pm 0.4\%$ of maximum output frequency.
	Frequency Control	Speed regulation - with Slip Compensation 0.5% of base speed across 40:1 speed range 40:1 operating range 10 rad/sec bandwidth (Volts per Hertz Mode) Standard Vector
		Speed regulation - with Slip Compensation 0.5% of base speed across 80:1 speed range 80:1 operating range 20 rad/sec bandwidth (Sensorless Vector Mode) Standard Vector
		Speed regulation - with feedback 0.1% of base speed across 80:1 speed range 80:1 operating range 20 rad/sec bandwidth (Sensorless Vector Mode) Vector
	Speed Control	Speed regulation - without feedback 0.1% of base speed across 120:1 speed range 120:1 operating range 50 rad/sec bandwidth (Vector Control Mode) Vector
		Speed regulation - with feedback 0.001% of base speed across 120:1 speed range 1000:1 operating range 250 rad/sec bandwidth (Vector Control Mode) Vector
	Torque Regulation	Torque Regulation - without feedback +/-10%, 600 rad/sec bandwidth Vector
		Torque Regulation - with feedback +/-5%, 2500 rad/sec bandwidth Vector
	Selectable Motor Control:	Sensorless Vector with full tuning. Standard V/Hz with full custom capability and vector control.
	Stop Modes:	Multiple programmable stop modes including - Ramp, Coast, DC-Brake, Ramp-to-Hold and S-curve.
	Accel/Decel:	Two independently programmable accel & decel times. Each time may be programmed from 0-3600 seconds in 0.1 sec. increments
	Intermittent Overload:	110% Overload capability for up to 1 minute 150% Overload capability for up to 3 seconds
	Current Limit Capability:	Proactive Current Limit programmable from 20 to 160% of rated output current. Independently programmable proportional and integral gain.
	Electronic Motor Overload Protection	Class 10 protection with speed sensitive response. Investigated by U.L. to comply with N.E.C. Article 430. U.L. File E59272, volume 12.
Encoder	Type:	Incremental, dual channel
	Supply:	12V, 500 mA. 12V, 10 mA minimum inputs isolated with differential transmitter, 250 kHz maximum.
	Quadrature:	90° +/-27° at 25° C.
	Duty Cycle:	50% +/-10%
	Requirements:	Encoders must be line driver type, quadrature (dual channel) or pulse (single channel), 8-15V DC output, single-ended or differential and capable of supplying a minimum of 10 mA per channel. Maximum input frequency is 250 kHz. The Encoder Interface Board accepts 12V DC square-wave with a minimum high state voltage of 7.0V DC (12 volt encoder). Maximum low state voltage is 0.4V DC.

(1) Applied noise impulses may be counted in addition to the standard pulse train causing erroneously high [Pulse Freq] readings.

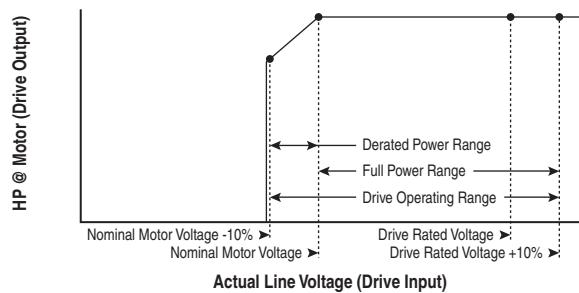

Specifications

Voltage Tolerance

Drive Rating	Nominal Line Voltage	Nominal Motor Voltage	Drive Full Power Range	Drive Operating Range
200-240	200	200†	200-264	180-264
	208	208	208-264	
	240	230	230-264

	400	400	400-528	
	480	460	460-528	
500-600 (Frames 1-4 Only)	600	575†	575-660	432-660
500-690 (Frames 5 & 6 Only)	600	575†	575-660	475-759
	690	690	690-759	475-759

Drive Full Power Range = Nominal Motor Voltage to Drive Rated Voltage + 10%.
Rated current is available across the entire Drive Full Power Range

Drive Operating Range = Lowest† Nominal Motor Voltage - 10% to Drive Rated Voltage + 10%.
Drive Output is linearly derated when Actual Line Voltage is less than the Nominal Motor Voltage

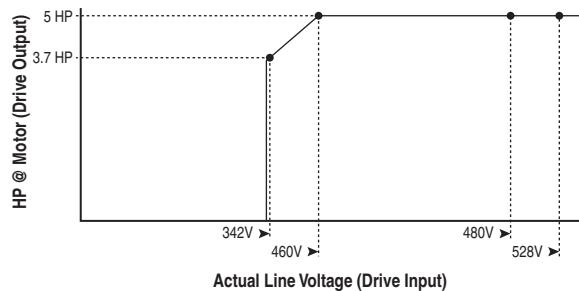

Example:

Calculate the maximum power of a 5 HP, 460V motor connected to a 480V rated drive supplied with 342V Actual Line Voltage input.

- Actual Line Voltage / Nominal Motor Voltage = 74.3%
- $74.3\% \times 5 \text{ HP} = 3.7 \text{ HP}$
- $74.3\% \times 60 \text{ Hz} = 44.6 \text{ Hz}$

At 342V Actual Line Voltage, the maximum power the 5 HP, 460V motor can produce is 3.7 HP at 44.6 Hz.
