

Intelligent underfloor heating with iCon

Optimum offers you the iCon intelligent underfloor heating control system. Slick, intelligent and versatile with the ability to control **32 different zones**, each with their own individual heat profiles. Each zone is monitored by either a blank plate room sensor or a digital room sensor.

The system can also be connected to your home **WiFi** and allows **access via the internet** anywhere in the world. Further features for holiday and seasonal changes are included as well as **domestic hot water** and radiator management. The iCon's blank plate sensors are available in numerous finishes to match your interior décor perfectly. No other UFH control system combines this level of function with coordinating design.

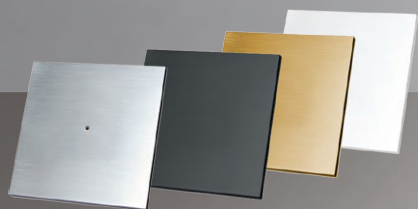

Stylish Touchscreen Design

- Controls up to 32 different rooms
- Each zone has its own heat profile
- Controlled centrally from one easy to use console
- Slick touchscreen design
- Manages your domestic hot water
- Connects to your home WiFi
- Remote access via your device or mobile
- 4" and 7" versions available
- Integrated user manual
- Room sensors that match your existing decor

One Central Console

Guaranteed to reduce your annual heating bill

Optimum can supply room sensors in a range of finishes or can match any decor to suit your own furnishings. Adjustable digital sensors can also be used where local control is required.

Efficiency at your fingertips

All heating systems should have greater emphasis on controllability, underfloor heating is no exception. We believe that the way in which the controls manage a heating system is every bit as important, as the design, installation and heat source.

Please give serious consideration to the level of control that you opt for, as escalating fuel prices and global warming are both serious issues. It is important, as you have now considered a floor heating system, that you take the time to decide which control option you choose. **Making the right choice can make a large difference to your fuel usage.**

In most domestic situations, especially in larger houses, people spend most of their time in a relatively small part of their home. The **iCon** allows you to accurately programme the correct time and temperature profile for every room ensuring maximum efficiency.

The extra cost of the **iCon** is normally recouped through **reduced running costs** within the first 18 months of operation. Optimum will always ensure that every **iCon** system has been set up correctly so these benefits will be realised.

The **Optimum** Control for the **Optimum** underfloor heating
