

## Quick Installation Guide

### MIMO XR™ 802.11g PCI Adapter

Model # AWLH5026

#### Package Content:

- Wireless PCI Adapter
- Driver & Utility CD
- Quick Installation Guide

Ver. 1A

**Step 2** After turning on the computer, Windows will launch the **Found New Hardware Wizard**. The Found New Hardware Wizard appears differently depending on your operating system. Click **Cancel** to quit the wizard and insert the Driver & Utility CD into your CD drive.

## Section 1

### Install Utility Software

This Quick Installation Guide only provides the basic instructions. For more advanced features such as configuring encryption settings, please refer to the User's Manual in the provided CD.

**Note:** Be sure to power off your computer before inserting the PCI adapter.

For Windows 98SE and ME users, you may be prompted to insert the Windows 98SE or ME CD during the driver installation. Be sure to have your Windows 98SE or ME CD ready.

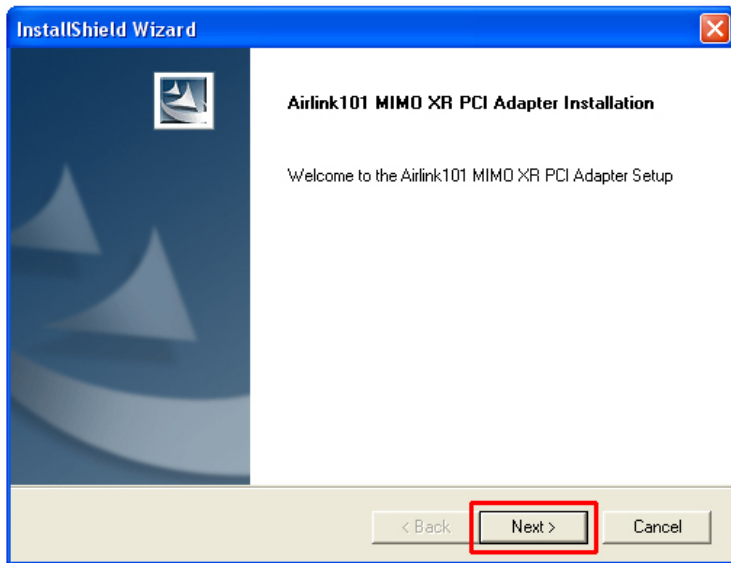

**Step 1** Insert the PCI adapter into an available PCI slot and turn on your computer.

**Step 3** The Autorun screen will pop up. Select **Install Utility** from the menu.

**Note:** If the Autorun screen doesn't appear automatically go to **Start, Run,** type **D:\Utility\Setup.exe** (where **D** is the letter of your CD drive) and click **OK** to install the utility directly.

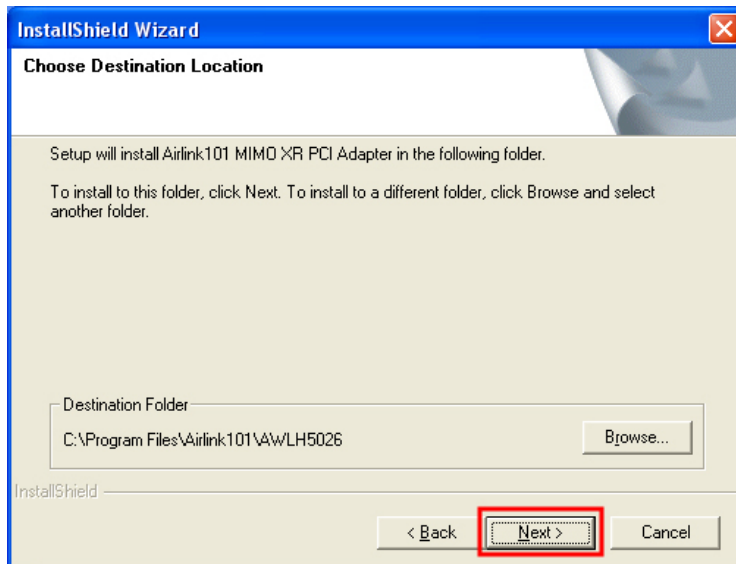

**Step 4** Click **Next** at the welcome screen.

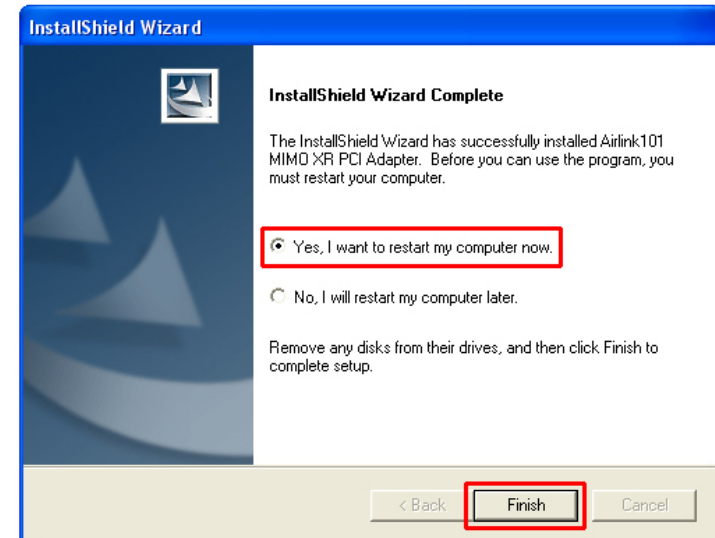

**Step 6** Click **Continue Anyway** at the Windows Logo Screen.  
(For Windows 2000, click **Yes** at the Digital Signature Not Found prompt).

**Step 5** Click **Next** to accept the default destination folder.

**Step 7** Verify **Yes, I want to restart my computer now** is selected and click **Finish** to restart your computer.

## Section 2

### Configure the Wireless PCI Adapter

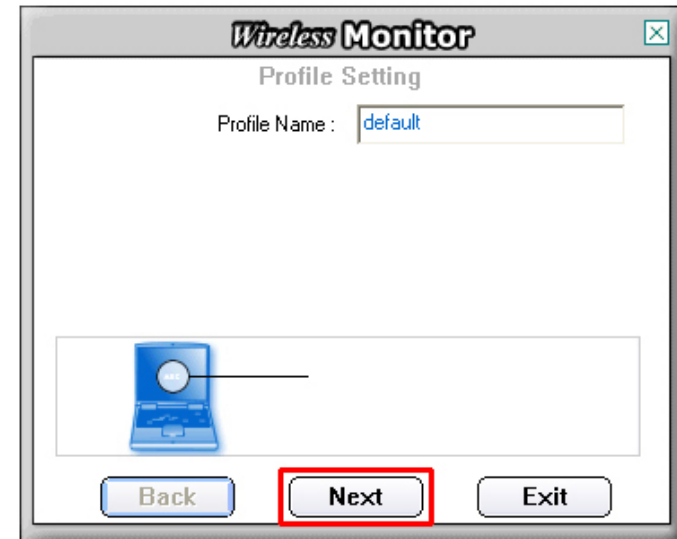

To open the Wireless PCI Adapter's utility go to **Start > (All) Programs > Airlink101 MIMO PCI Utility > Airlink101 MIMO PCI Utility**.

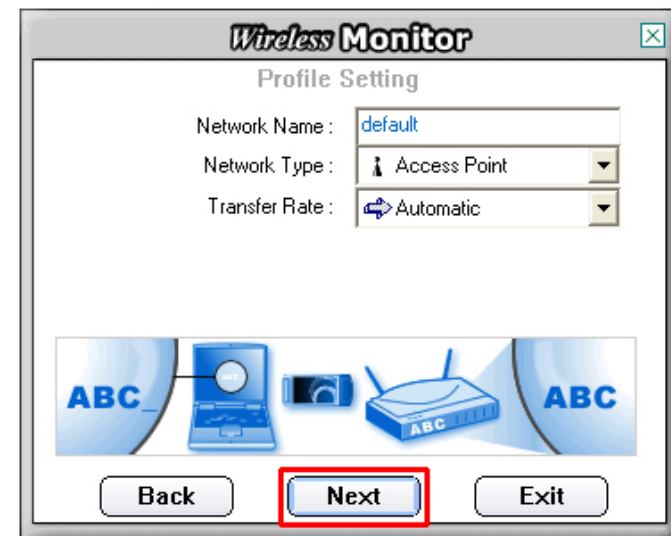

**Step 1** Go to the **AP List** tab, select the **SSID** (Network Name) of the wireless network you wish to connect to, and click **Connect**.

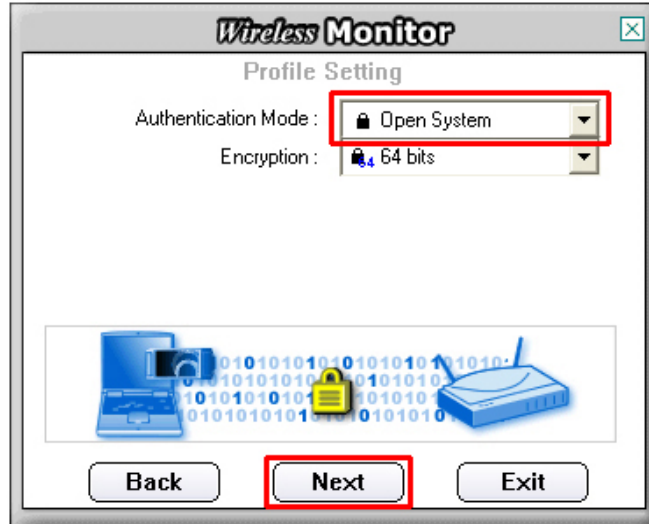

**Step 2** If encryption is not enabled for the selected access point / router, skip to step 6. Otherwise, enter a **Profile Name** for your wireless setting and click **Next**.

**Step 3** Verify that the **Network Name** matches the **SSID** of your wireless network and click **Next**.

**Step 4** Select the proper encryption setting for your wireless router or access point from the drop-down menu and click **Next**.

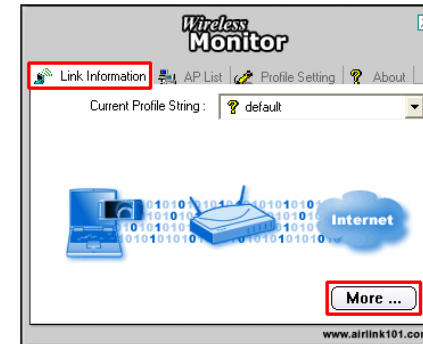

**Step 5** Follow the on-screen instructions to complete the encryption settings. Click **Complete** when finished.

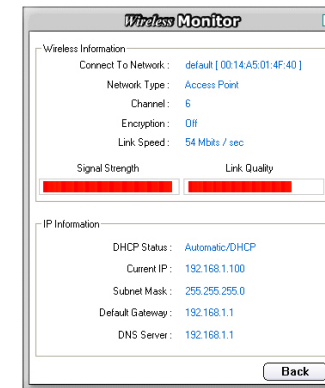

**Step 6** You should see a blue circle around the antenna icon indicating a valid connection.

**Step 7** Go to the **Link Information** tab and click on the **More** button.

**Step 8** Verify that you are receiving adequate Signal Strength and Link Quality and that you have been assigned a valid IP address (instead of all 0's). If all 0's, please repeat step 1 - 5.

\*Theoretical maximum wireless signal rate based on IEEE standard 802.11g specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, mix of wireless products used, radio frequency interference (e.g., cordless telephones and microwaves) as well as network overhead lower actual data throughput rate.
