## Introduction

ABEW is a Windows application to solve acid-base chemical equilibrium.

This manual isn't about acid-base reactions theory.

Please, read this manual carefully in order to learn all the capabilities of the application.

## Terms of use

In no event shall VaxaSoftware be liable to anyone for direct, indirect, special, collateral, incidental, or consequential damages by the use or impossibility of use of the software, nor by the effects in the operation of other software or the operating system.

Before the installation we recommended to make backup of your data and create a restoration point.

You will be able freely to evaluate the software during the time that considers necessary. Passed this period of evaluation you would have or to register it or uninstall it.

To register the software, please see the option "REGISTER APPLICATION" in the help menu of the software.

After paying the registry fee you will receive by email the REGISTRATION KEY of the software. Once registered the software, it will be able to use the options that were disabled until that moment.

The REGISTRATION KEY is UNIQUE for EACH COMPUTER.

You cannot use the same REGISTRATION KEY for multiple computers.

You can freely distribute unaltered copies of the installation system of the software to other users. You cannot decompile the software nor use no type of reverse engineer for its analysis or modification. You cannot use part or the totality of the software to create a new software.

### COOKIES

VaxaSoftware only uses cookies during the registration process.

If you want to register the software without using cookies, please contact us at [info@vaxasoftware.com](mailto:info@vaxasoftware.com)

### Conflicts of shared files:

VaxaSoftware assumes no liability for conflicts due to the incompatibility of shared files (\*.dll, \*.ocx and other files).

VaxaSoftware's software use shared files (\*.dll, \*.ocx and other files).

It is possible that the shared file already exists and whether or not previously replaced by a different version during the installation of the VaxaSoftware's software.

This can cause the installed software may not work and/or a third party software that shares the same file does not.

Also the installation of a third party software can cause the VaxaSoftware's software or third party software may not work correctly.

VaxaSoftware will try to resolve these conflicts in a reasonable manner, despite its satisfactory resolution is not guaranteed.

**Design, products, specifications, and prices are for information purposes only. VaxaSoftware reserves the right to change or modify design, products, specifications, and prices at any time without prior notice.**

10 Concentration (mol/L)  Concentration (mol/L)  Concentration (mol/L)

Concentration (mol/L)

$$\text{H}_2\text{A} \rightleftharpoons \text{H}^+ + \text{HA}^- \quad k_1 = \frac{[\text{H}^+][\text{HA}^-]}{[\text{H}_2\text{A}]}$$

$$\text{HA}^- \rightleftharpoons \text{H}^+ + \text{A}^{2-} \quad k_2 = \frac{[\text{H}^+][\text{A}^{2-}]}{[\text{HA}^-]}$$

$$k_w = [\text{H}^+][\text{OH}^-]$$

Mass balance:  

$$C_a = [\text{H}_2\text{A}] + [\text{HA}^-] + [\text{A}^{2-}]$$

Charge balance:  

$$[\text{H}^+] = [\text{OH}^-] + [\text{HA}^-] + 2[\text{A}^{2-}]$$

Fig. 1  
Main window

### ( 1 ) Menu bar

It contains the menus *File*, *Type of calculation*, *Setup*, and *Help*.

#### **File** menu

##### **Exit**

Close the application.

#### **Type of calculation** menu

##### **Single acid-base**

To perform equilibriums of single solutions of acids or bases.

##### **Salt hydrolysis**

To perform equilibriums of salts hydrolysis.

##### **Mixture: acid and base**

To perform equilibriums of mixtures of acids and bases.

##### **Buffer solution**

To perform equilibriums of buffer solutions.

##### **Titration**

To perform titrations of acids and bases.

## Setup menu

### **Decimal separator:**

We can select either point  or comma  as decimal separator.  
The output values are shown using the selected decimal separator.

### **Significant digits**

We can select between 4 and 12 significant digits for the output values.

### **Ionic product of water Kw**

Allow us to select the value of the ionic product of water Kw.

We can select either  $pK_W = 14.00$  (25 °C) or  $pK_W = 13.59$  (37 °C)

#### ◆ **Note:**

$pK_W = -\log_{10}K_W$  therefore  $K_W = 10^{-pK_W}$

thus:  $pK_W = 14.00 \rightarrow K_W = 10^{-14}$

$pK_W = 13.59 \rightarrow K_W = 2.57 \cdot 10^{-14}$

## Help menu

### **User's manual (PDF document)...**

Show this manual.

### **Application registration...**

Show the registration form window to register the application.

### **Disabled functions in the unregistered version**

Show the list of disabled functions when the application is not registered.

### **Home page (www.vaxasoftware.com)...**

Connect to VaxaSoftware home page.

An active Internet connection and a browser are required.

### **About...**

Show the *Splash* window with the version and description of the application.

## ( 2 ) Tab bar

### **Single acid-base**

To perform equilibriums of single solutions of acids or bases.

### **Salt hydrolysis**

To perform equilibriums of salts hydrolysis.

### **Mixture: acid and base**

To perform equilibriums of mixtures of acids and bases.

### **Buffer solution**

To perform equilibriums of buffer solutions.

### **Titration**

To perform titrations of acids and bases.

## ( 3 ) Current calculation title

Shows the title of the current equilibrium calculation.

#### ( 4 ) Option buttons

Allow us to select a more specific calculation.

#### ( 5 ) First dissociation complete checkbox

Allows us indicate when a diprotic or triprotic acid has its first dissociation is complete.  
(It's mean the first acidity constant is infinity:  $k_1 = \infty$ ).

#### ( 6 ) Input textboxes

Allow us to enter the input values.

The numeric values can be entered in the following formats:

- Standard numbers: 0.24; 15.23
- Percentage: 90%; 12%
- Fractions: 2/3; 5/8
- Scientific notation: 2E-4 (equal to  $2 \times 10^{-4} = 0.0002$ )

##### ◆ Note 1:

##### **Decimal separator:**

We can use either point  or comma  as decimal separator. The output value is shown using the same decimal separator.

##### ◆ Note 2:

##### **Scientific notation:**

The scientific notation is used to show very big or very small numbers.  
A scientific notation number has a mantissa and a power of 10.  
In order to enter a scientific notation number we use letter E to input the exponent of 10.

Examples:

$5.67 \times 10^{89}$  is entered as 5.67 E 89  
 $1.23 \times 10^{-34}$  is entered as 1.23 E-34

#### ( 7 ) Calculate, Graphic and Clear buttons

##### **Calculate**

Calculate output values from input values.

##### **Graphic**

Show *Edit type of graphic* window.

##### **Clear**

Clear all the input/output values.

#### ( 8 ) Output textboxes

Shows the output values.

#### ( 9 ) Formulas

Shows the formulas of the current equilibrium.

## ( 10 ) Window control buttons

These are the classics buttons of the windows of MS-Windows ®.

### **Minimize** button

Minimize the application to an icon on the desktop.

### **Maximize / Restore** button

Maximize / restore the application's window size.

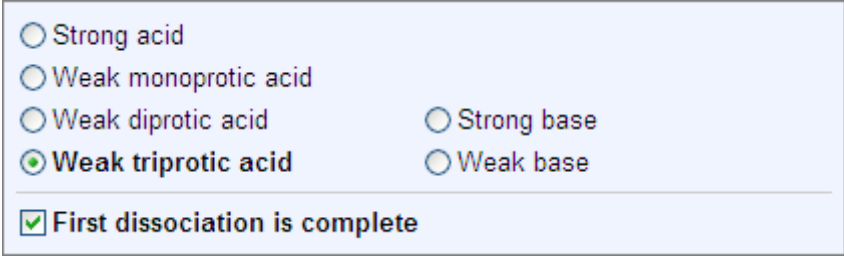

### **Close** button

Close the application. Also we can press Alt + F4 keys on our keyboard.

## Types of equilibrium calculations

This application can perform 5 main types of equilibrium calculations.  
We'll do click the appropriate tab to select the desired type of calculation.

### Single acid or base solution equilibrium

Strong acid  
 Weak monoprotic acid  
 Weak diprotic acid  
 Weak triprotic acid  
 Strong base  
 Weak base

---

First dissociation is complete

Fig. 2

The following calculations are available:

- Strong acid.
- Weak monoprotic acid.
- Weak diprotic acid.
- Weak triprotic acid.
- Strong base
- Weak base.

#### ◆ **Note:**

If the acid is diprotic or triprotic and its first dissociation stage is complete then we press the *First dissociation is complete* checkbox.

(It's mean the first acidity constant is infinity:  $k_1 = \infty$ ).

## Salt hydrolysis equilibrium

- Salt from strong acid and strong base
- Salt from strong acid and weak base
- Salt from weak acid and strong base
- Salt from weak acid and weak base

Fig. 3

The following calculations are available:

- Salt from strong acid and strong base.
- Salt from strong acid and weak base.
- Salt from weak acid and strong base.
- Salt from weak acid and weak base.

## Mixture of acid + base equilibrium

- Strong acid + strong base
  - Strong acid + weak base
  - Weak acid + strong base
  - Weak acid + weak base
  - Diprotic acid + strong base
  - Triprotic acid + strong base
- 
- First dissociation is complete

Fig. 4

The following calculations are available:

- Strong acid + strong base.
- Strong acid + weak base.
- Weak (monoprotic) acid + strong base.
- Weak (monoprotic) acid + weak base.
- Diprotic acid + strong base.
- Triprotic acid + strong base.

◆ **Note:**

If the acid is diprotic or triprotic and its first dissociation stage is complete then we press the *First dissociation is complete* checkbox.

(It's mean the first acidity constant is infinity:  $k_1 = \infty$ ).

## Buffer solution equilibrium

- Buffer of weak acid and its salt
- Buffer of weak base and its salt
- Buffer of weak acid and its salt (strong acid is added)
- Buffer of weak base and its salt (strong acid is added)
- Buffer of weak acid and its salt (strong base is added)
- Buffer of weak base and its salt (strong base is added)

Fig. 5

The following calculations are available:

- Buffer of weak acid and its salt.
- Buffer of weak base and its salt.
- Buffer of weak acid and its salt (strong acid is added).
- Buffer of weak base and its salt (strong acid is added).
- Buffer of weak acid and its salt (strong base is added).
- Buffer of weak base and its salt (strong base is added).

## Acid-base titration equilibrium

- Strong acid with strong base
  - Weak acid with strong base
  - Strong base with strong acid
  - Diprotic acid with strong base
  - Weak base with strong acid
  - Triprotic acid with strong base
- 
- First dissociation is complete

Fig. 6

The following calculations are available:

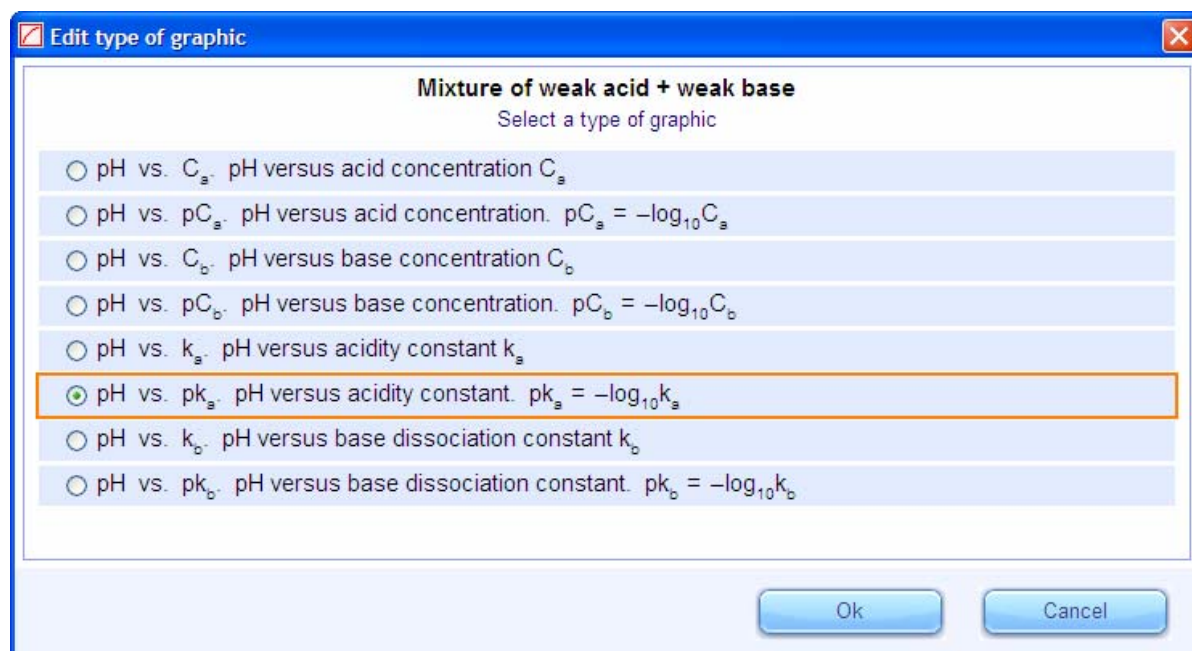

- Titration of strong acid with strong base.
- Titration of weak (monoprotic) acid with strong base.
- Titration of strong base with strong acid.
- Titration of weak base with strong acid.
- Titration of diprotic acid with strong base.
- Titration of triprotic acid with strong base.

◆ **Note:**

If the acid is diprotic or triprotic and its first dissociation stage is complete then we press the *First dissociation is complete* checkbox.

(It's mean the first acidity constant is infinity:  $k_1 = \infty$ ).

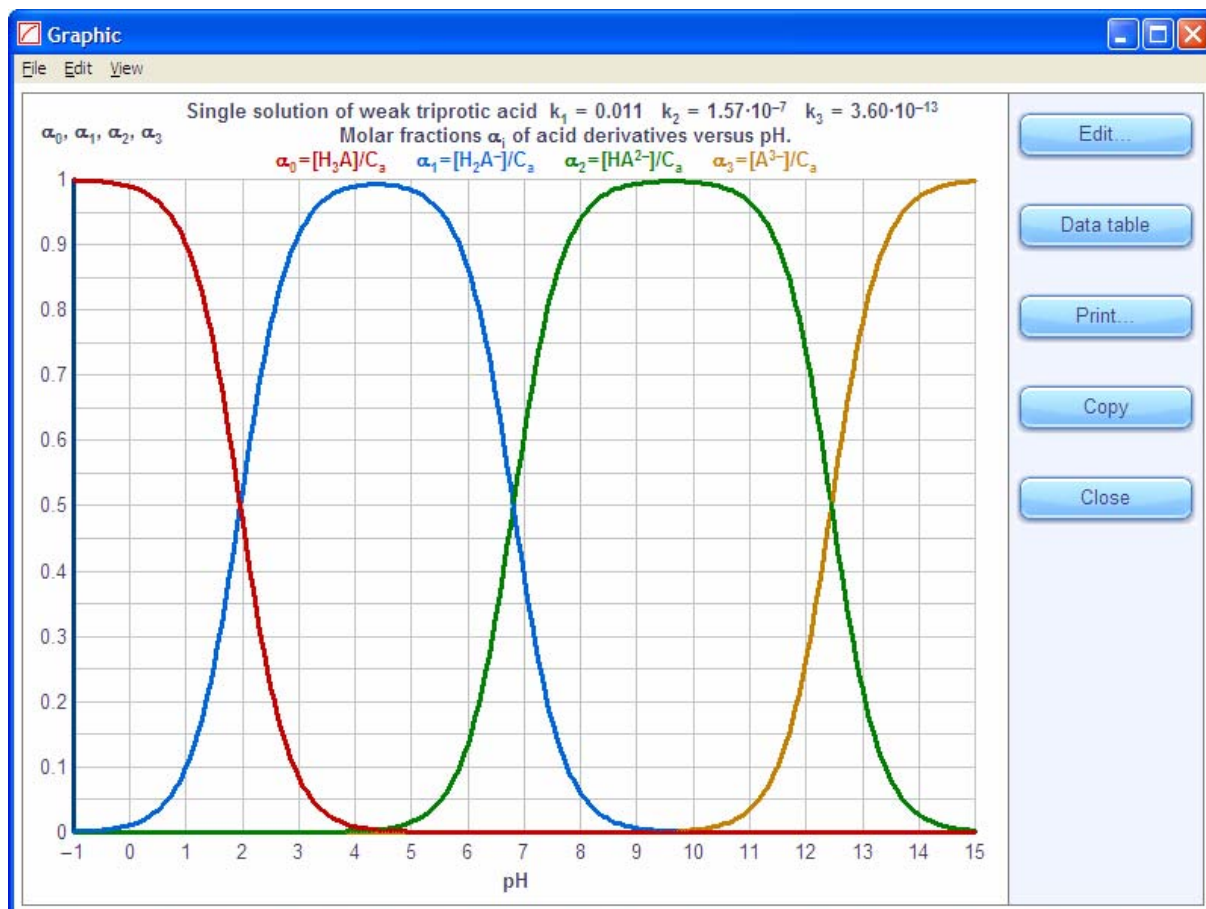

## Edit type of graphic window

**Fig. 7**  
Selecting type of graphic window

This window allows us to select the graph type to represent the equilibrium calculation.

## Graphic window

**Fig. 8**  
Graphic window

The *graphic* window shows the graph for the selected type of equilibrium calculation.

This window has the following menus and buttons:

### **File** menu

#### **Edit type of graphic...**

Open the *Edit type of graphic* window.

#### **Save image as...**

Save the graph as a Bitmap file.

#### **Print...**

Open the *Print* window. In it we can select the printer destination and specify the number of copies.

#### **Close**

Close the window.

### **Edit** menu

#### **Copy**

Copy the graph to the clipboard.

## View menu

### Data table

Open the *Data table* window.

## Buttons:

### Edit...

Open the *Edit type of graphic window*.

### Data table

Open the *Data table* window.

### Print...

Open the *Print* window. In it we can select the printer destination and specify the number of copies.

### Copy

Copy the graph to the clipboard.

### Close

Close the window.

## Data table window

Single solution of weak triprotic acid  $k_1 = 0.011$   $k_2 = 1.57 \cdot 10^{-7}$   $k_3 = 3.60 \cdot 10^{-13}$   
Molar fractions  $\alpha_i$  of acid derivatives versus pH.  
 $\alpha_0 = [H_3A]/C_a$   $\alpha_1 = [H_2A^-]/C_a$   $\alpha_2 = [HA^{2-}]/C_a$   $\alpha_3 = [A^{3-}]/C_a$

Fig. 9  
Data table window

The *Data table* window displays the data table of the current graphic.

This window has the following menus and buttons:

#### **File** menu

##### **Save data table as...**

Save the data table as text file.

##### ◆ **Note:**

Some formats might get lost.

##### **Print...**

Open the *Print* window. In it we can select the printer destination and specify the number of copies.

##### **Close**

Close the window.

#### **Edit** menu

##### **Copy**

Copy the data table to the clipboard.

##### ◆ **Note:**

Some formats might get lost.

##### **Print..**

Open the *Print* window. In it we can select the printer destination and specify the number of copies.

#### **Buttons:**

##### **Print..**

Open the *Print* window. In it we can select the printer destination and specify the number of copies.

##### **Copy**

Copy the data table to the clipboard.

##### **Close**

Close the window.

## Examples

The following examples assume that the ionic product of water is  $pK_w = 14.00$ .

### Example 1

#### Equilibrium of triprotic acid.

We have a solution of phosphoric acid ( $H_3PO_4$ ) with a concentration of 0.2 mol/L. The dissociation constants are  $k_1 = 1.1 \cdot 10^{-2}$   $k_2 = 1.57 \cdot 10^{-7}$   $k_3 = 3.6 \cdot 10^{-13}$

a) Calculate the pH of this solution.

b) Make the graph of the distribution of molar fractions of species derived from the acid versus pH and its corresponding data table.

#### Resolution procedure

1) Select the tab *Single acid or base*.

2) Select the option *Weak triprotic acid*.

3) Enter values:

$$C_a = 0.2 \quad k_1 = 1.1E-2 \quad k_2 = 1.57E-7 \quad k_3 = 3.6E-13$$

4) Press *Calculate* button:

5) We get the value of pH:

$$pH = 1,38$$

6) Press *Graphic* button to show the *Edit type of graphic window*.

7) In this window, select the option *Molar fractions  $\alpha_i$  of acid derivatives versus pH*.

8) Then the *Graphic window* is shown. (see Fig. 8).

Recall that in this case, the molar fractions are:

$$\alpha_0 = [H_3PO_4] / C_a \quad \alpha_1 = [H_2PO_4^-] / C_a \quad \alpha_2 = [HPO_4^{2-}] / C_a \quad \alpha_3 = [PO_4^{3-}] / C_a$$

9) Press *Data table* button to show the *Data table window*. (see Fig. 9).

## Example 2

### Titration of weak acid

We have titrated 30 mL of a solution of acetic acid (weak acid) with 42 mL of 0.095 mol/L of sodium hydroxide solution (NaOH, strong base).

The dissociation constant of acetic acid is:  $k_a = 1.8 \cdot 10^{-5}$

- Calculate the concentration of acetic acid.
- Find the pH at the equivalence point.
- Make the graph of the pH versus volume of added strong base.

### Resolution procedure

- Select the tab *Titration*.
- Select the option *Weak acid with strong base*.
- Enter values:  
 $V_a = 30$        $k_a = 1.8E-5$        $C_{SB} = 0.095$        $V_{eq} = 42$
- Press *Calculate* button:
- We get the value of concentration of acetic acid and pH at the equivalence point:  
 $C_a = 0.133 \text{ mol/L}$        $\text{pH}_{eq} = 8.744$
- Press *Graphic* button to show the *Edit type of graphic window*.
- In this window, select the option *pH versus volume of added strong base*.
- Then the *Graphic* window is opened showing the titration curve. (see Fig. 10).

**Fig. 10**  
Titration curve of acetic acid with sodium hydroxide.

## Formulas of acid-base equilibriums

### Single acid or base solution equilibrium

<b>Strong acid</b>	$\text{HA} \rightarrow \text{H}^+ + \text{A}^-$ $k_w = [\text{H}^+] \cdot [\text{OH}^-]$ $[\text{HA}] = 0$ <p>Mass balance:</p> $C_a = [\text{A}^-]$ <p>Charge balance:</p> $[\text{H}^+] = [\text{OH}^-] + [\text{A}^-]$
<b>Strong base</b>	$\text{BOH} \rightarrow \text{B}^+ + \text{OH}^-$ $k_w = [\text{H}^+] \cdot [\text{OH}^-]$ $[\text{BOH}] = 0$ <p>Mass balance:</p> $C_b = [\text{B}^+]$ <p>Charge balance:</p> $[\text{H}^+] + [\text{B}^+] = [\text{OH}^-]$
<b>Weak base</b>	$\text{BOH} \leftrightarrow \text{B}^+ + \text{OH}^- \quad k_b = \frac{[\text{B}^+] \cdot [\text{OH}^-]}{[\text{BOH}]}$ $k_w = [\text{H}^+] \cdot [\text{OH}^-] \quad \alpha = \frac{[\text{B}^+]}{C_b}$ <p>Mass balance:</p> $C_b = [\text{BOH}] + [\text{B}^+]$ <p>Charge balance:</p> $[\text{H}^+] + [\text{B}^+] = [\text{OH}^-]$

**Acid-base titration equilibrium**

<b>Titration of monoprotic base with strong acid</b>	$\text{BOH} + \text{HA} \rightarrow \text{BA} + \text{H}_2\text{O}$ $V_{eq} = \frac{C_b V_b}{C_{SA}}$
<b>Titration of monoprotic acid with strong base</b>	$\text{HA} + \text{BOH} \rightarrow \text{BA} + \text{H}_2\text{O}$ $V_{eq} = \frac{C_a V_a}{C_{SB}}$
<b>Titration of diprotic acid with strong base</b>	$\text{H}_2\text{A} + 2\text{BOH} \rightarrow \text{B}_2\text{A} + 2\text{H}_2\text{O}$ $V_{eq} = \frac{2 C_a V_a}{C_{SB}}, \quad V_{eq1} = \frac{V_{eq}}{2}$
<b>Titration of triprotic acid with strong base</b>	$\text{H}_3\text{A} + 3\text{BOH} \rightarrow \text{B}_3\text{A} + 3\text{H}_2\text{O}$ $V_{eq} = \frac{3 C_a V_a}{C_{SB}}, \quad V_{eq1} = \frac{V_{eq}}{3}, \quad V_{eq2} = \frac{2 V_{eq}}{3}$

## Types of graphics

pH vs. $C_a$	pH versus acid concentration $C_a$
pH vs. $pC_a$	pH versus acid concentration. $pC_a = -\log_{10}C_a$
pH vs. $C_b$	pH versus base concentration $C_b$
pH vs. $pC_b$	pH versus base concentration. $pC_b = -\log_{10}C_b$
pH vs. $C_S$	pH versus salt concentration $C_S$
pH vs. $pC_S$	pH versus salt concentration. $pC_S = -\log_{10}C_S$
pH vs. $k_a$	pH versus acidity constant $k_a$
pH vs. $pk_a$	pH versus acidity constant. $pk_a = -\log_{10}k_a$
pH vs. $k_b$	pH versus base dissociation constant $k_b$
pH vs. $pk_b$	pH versus base dissociation constant. $pk_b = -\log_{10}k_b$
$\alpha$ vs. $C_a$	Degree of dissociation $\alpha$ versus acid concentration $C_a$
$\alpha$ vs. $pC_a$	Degree of dissociation $\alpha$ versus acid concentration. $pC_a = -\log_{10}C_a$
$\alpha$ vs. $C_b$	Degree of dissociation $\alpha$ versus base concentration $C_b$
$\alpha$ vs. $pC_b$	Degree of dissociation $\alpha$ versus base concentration. $pC_b = -\log_{10}C_b$
$\alpha_0, \alpha_1$ vs. pH	Molar fractions $\alpha_i$ of acid derivatives versus pH
$\alpha_0, \alpha_1$ vs. pH	Molar fractions $\alpha_i$ of base derivatives versus pH
$\alpha_0, \alpha_1, \alpha_2$ vs. pH	Molar fractions $\alpha_i$ of acid derivatives versus pH
$\alpha_0, \alpha_1, \alpha_2, \alpha_3$ vs. pH	Molar fractions $\alpha_i$ of acid derivatives versus pH
pH vs. $C_{SA}$	pH versus added strong acid concentration $C_{SA}$
pH vs. $pC_{SA}$	pH versus added strong acid concentration. $pC_{SA} = -\log_{10}C_{SA}$
pH vs. $C_{SB}$	pH versus added strong base concentration $C_{SB}$
pH vs. $pC_{SB}$	pH versus added strong base concentration. $pC_{SB} = -\log_{10}C_{SB}$
pH vs. $V_{SA}$	pH versus volume of added strong acid $V_{SA}$
pH vs. $V_{SB}$	pH versus volume of added strong base $V_{SB}$
$\Delta pH/\Delta pV$ vs. $V_{SA}$	Rate of change of pH with change of volume versus volume of added strong acid $V_{SA}$
$\Delta pH/\Delta pV$ vs. $V_{SB}$	Rate of change of pH with change of volume versus volume of added strong base $V_{SB}$

## Specifications

<b>Description</b>	<i>ABEW</i> is a Windows application to solve acid-base chemical equilibrium.
<b>License</b>	Shareware
<b>Precision</b>	Output: between 4 and 12 significant digits.
<b>Decimal separator for input values</b>	Point or comma.
<b>Decimal separator for output values</b>	The same separator that used in the last value entered or the last one selected in the setup menu.
<b>Ionic product of water <math>K_w</math></b>	<b>2 values:</b> $pK_w = 14.00$ at 25 °C, $pK_w = 13.59$ at 37 °C
<b>Types of graphics</b>	<b>26 types</b> (see the <a href="#">Types of graphics table</a> )
<b>Main types of calculations:</b>	<b>5 main types:</b> <ul style="list-style-type: none"><li>- Single acid-base</li><li>- Salt hydrolysis</li><li>- Mixture: acid and base</li><li>- Buffer solution</li><li>- Titration</li></ul>
<b>Types of calculations (total):</b>	<b>34 types:</b> <ul style="list-style-type: none"><li>- Single acid-base (8 types)</li><li>- Salt hydrolysis (4 types)</li><li>- Mixture: acid and base (8 types)</li><li>- Buffer solution (6 types)</li><li>- Titration (8 types)</li></ul>
<b>Range of pH, <math>pC_i</math> and <math>pK_i</math> in graphics</b>	<b>Minimum:</b> -1 <b>Maximum:</b> 15
