

DNNGo PowerForms User Manual

Description

PowerForms is a multi-effect submission form module. It is able to use ordinary, grouped, collapsible effect etc, and easy to switch between these effects. You can set the form module to own different functional modules like contact us, order product, collect polls etc. It can be set to allow email notification to both parties after the form submission and redirect to a specified page or download a specified file. There are 13 common-used controls in the module, easy for the user to input relevant data. The super powerful jQuery validationEngine ensures the security and convenience of data verification.

We will offer a regular update with fresh effects or verifications on a weekly basis, you can enjoy this value-added service free of charge.

Features

Support DNN5 ~ DNN7.X.X

Support browsers like ie7-10、Firefox、Chrome、Safari

Support multiple form effects, support to add more form effects through a new version upgrade.

Support different theme styles switch through a single effect

Support 13+ input control type support 10+verification type.

Support to display the logged-in user's name, mail address, country etc in the control.

Support jQuery validationEngine, data verification friendly and secure .

Support a wizard form interface, support grouped forms .

Support email notification to both parties after the form submission.

Support data export,, allows to export the collected information as cvs file.

Support to import/export the custom files, back up and restore the files in a more convenient way.

Support verification code, double verification of ajax and form.

Support the temporary storage of the un-submitted form at the input state of the form, and avoid the data loss when closing the page.

Support multiple PowerForms modules on one page.

Support Premium User to have access to more form effects through a weekly update.

Install New Module

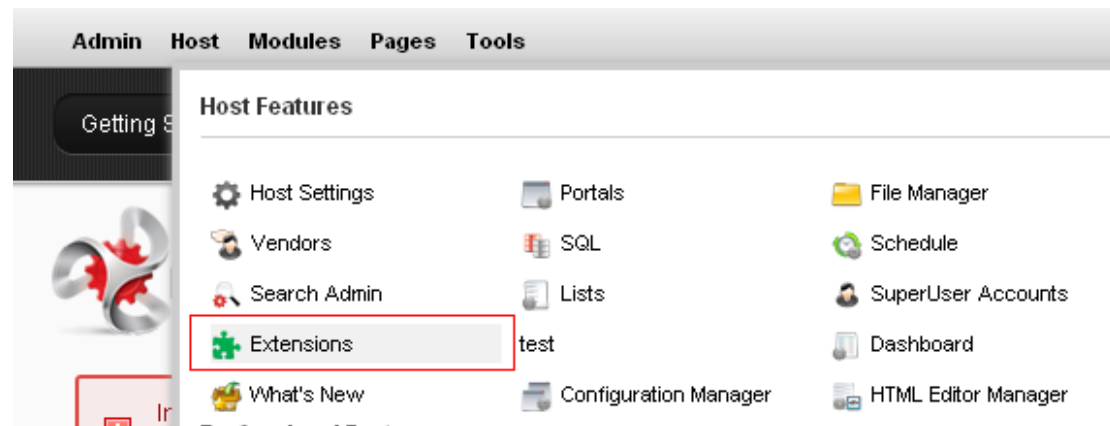

After you download this module, you will get the installation zip file.

DNNGo_PowerForms_PA.zip

If your site is DNN4.x or DNN5.x, please go here Host -> Module Definition and click "Install Module" button to upload the module.

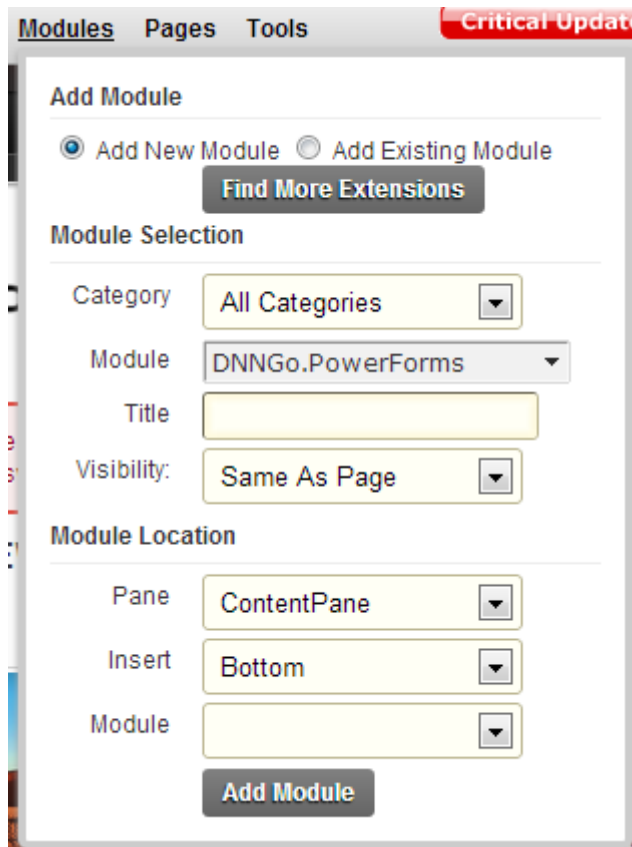

If your site is DNN6.x, you need to go here Host -> Extensions and click "Install Extension Wizard" button to install.

You can reference screenshots below:

Add the module

1. Mouse over the Modules in the top admin navigation, select ALL Categories in Category.
2. Select DNNGo PowerForms and then click Add Module, see below:

Add a new field:

The module will contain three default fields (Name, Email, Messages) when it is added to a page, click New Field so you can add more fields as you like, see below:

Edit

 [New Field](#)

 [Manager](#)

 [Options](#)

 [License](#)

1. You can define a name for this field and this Name will not appear in the form. Only characters from a-Z and 0-9 are allowed, Name in different fields shouldn't be the same.
2. The text entered in Alias will display in the form, see below:
Alias from different fields can be the same.

Name: *
 Email: *
 Messages:
 Captcha:

3. ToolTip will display in the input box and will functionalize as prompts. ToolTip will disappear on input box mouse click, see below:

*
 *

4. You can define different control types for each field.

Control Settings

Control Type:

- TextBox
- RichTextBox
- DropDownList
- ListBox
- RadioButtonList
- FileUpload
- CheckBox
- CheckBoxList
- DatePicker
- Label
- TextBox (DisplayName)
- TextBox (Email)
- DropDownList (Country)
- DropDownList (SendEmail)

You can enter Default Value for thr control here.

Control style settings:

1. TextBox

This field allows user to enter text in one or multiple lines.

Width is for the width of input box.

Rows if for the height of input box, for instance, it will show with multiple lines if you set it to 2, then you can enter multiline text.

Also you can set up different validation for the field, for instance, when you choose Email, it will only allow to enter correct email address.

Default Value is for setting a default value.

You must enter text for the text if Required is selected.

The field will not display in the form if Status is canceled.

This field will display in this way as below:

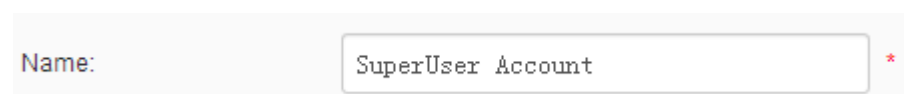

TextBox: *

2. TextBox (DisplayName)

This control will show the DisplayName of current user once he/she logs in.

It will display in this way as below:

Name: *

3. TextBox (Email)

This control will show the Email of current user once he/she logs in.

It will display in this way as below:

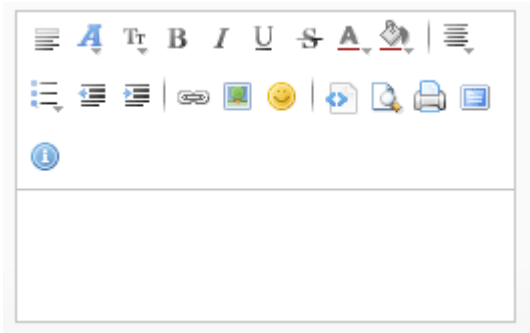

Email: *

4. RichTextBox

This control allows you to enter some complicated text, which could be links or images.

It will display in this way as below:

5. DropDownList

You can enter multiline text in List Collection, each line text stands for an option.

You can enter a default value in Default Value, which must be option included in the List Collection.

It will display in this way as below:

6. ListBox

You can enter multiline text in List Collection, each line text stands for an option.

You can enter one or multiple default values in Default Value, multiple values should be separated by comma.

All the default values should be option included in List Collection.

It will display in this way as below:

7. RadioButtonList

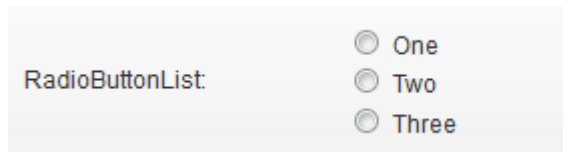

You can enter multiline text in List Collection, each line text stands for an option.

You can enter multiline text in List Collection, each line text stands for an option.

You can enter one or multiple default values in Default Value, multiple values should be separated by comma.

All the default values should be option included in List Collection.

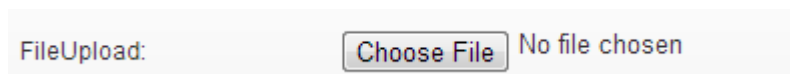

You can choose to display them vertically or horizontally in Direction.
It will display in this way as below:

RadioButtonList: One
 Two
 Three

13. DropDownList (Country)

This control contains option from all over the countries.

It will display in this way as below:

14. DropDownList (SendEmail)

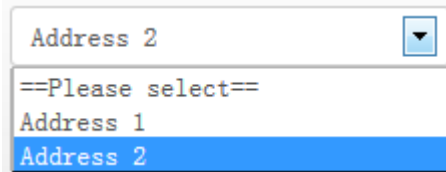

You can enter multiline text in List Collection, the text format must be written as below:

Address 1:admin@dnngo.net

Address 2:dnnskinddev@gmail.com

This field allows user to choose an address to send email.

For instance, if one user chooses Address2, the submitted email will be sent to email bonded with Address 2, which is dnnskinddev@gmail.com in this case.

The image shows a web form element. At the top, there is a label 'Address 2' next to a small downward-pointing arrow icon. Below this is a dropdown menu. The menu is currently open, showing a list of options: '==Please select==', 'Address 1', and 'Address 2'. The 'Address 2' option is highlighted with a blue background.

Manage List

Administrator is able to manage and sort the items added here.

Page 1 of 2		First Previous [1] 2 Next Last						
ID	Name	Group	Control	Time	User	Status	Sort	Action
1	Name		TextBox (DisplayName)	6/4/2013 9:17:59 PM	host	Activation	 	 
2	Email		TextBox (Email)	6/4/2013 9:17:59 PM	host	Activation	 	 
3	Messages		TextBox	6/4/2013 9:17:59 PM	host	Activation	 	 
4	TextBox		TextBox	6/4/2013 9:56:36 PM	host	Activation	 	 
5	TextBox2		TextBox	6/4/2013 9:56:50 PM	host	Activation	 	 

Import Export

You can import/export data in this module, **please note import would clear all the existing fields.**

Field List Export

Export To Xml:

Field List Import

Import Form Xml:

No file chosen

Submit History

You can view all the submissions through Submit History, also you can search the record at specific times. Administrator is able to export and check the data in an easy way.

1. Enter a time in BeginDate and EndDate and click Search, then the submission during this period will come out.
2. Delete is to delete the info selected.
3. Expand All is to expand/ contract all info.
4. The current item will expand on click icon +.

Install theme

You can upload a new theme here:

Install Theme

Theme File:

No file chosen

If there's duplication when you import themes, system will replace them with original themes by default.

Theme style

Here you can edit Theme settings to change the Theme style under the selected effect. .

Edit Theme Settings

Theme Settings

```
.Theme_Normal_Default input[type="datetime-local"],  
.Theme_Normal_Default input[type="date"],  
.Theme_Normal_Default input[type="month"],  
.Theme_Normal_Default input[type="time"],  
.Theme_Normal_Default input[type="week"],  
.Theme_Normal_Default input[type="number"],  
.Theme_Normal_Default input[type="email"],  
.Theme_Normal_Default input[type="url"],  
.Theme_Normal_Default input[type="search"],  
.Theme_Normal_Default input[type="tel"],  
.Theme_Normal_Default input[type="color"],  
.uneditable-input {
```

Effect List

This module contains five different form effects.

1. Effect_01_Basic_Normal is the default effect.

2. Effect_02_Basic_Group

You can use this effect to display some fields in groups.

You need to add some groups in Groups, see below:

Groups Management

Group Name:

This is the name to be displayed in the label position.

Description:

Describe only part of the Effects.

Group ID	Name	Description	Sort	Action
1	Group 1			

You can set a group for each field:

Group Settings

Groups:

- ==Please select==
- Group 1

Finally, the form will display in this way:

Group one

First Name: *

Last Name: *

Email Address: *

Group two

Message:

Captcha

Captcha:

3. Effect_03_Collapsible_Group

You can use this effect to expand or contract the field in one group, see below:

The image shows a web form with two expandable sections at the top: "Group 1" with a plus sign and "Group 2" with a minus sign. Below these is a "Messages" section with a text area labeled "Messages" and a "Messages:" label. At the bottom is a "Captcha" section with an input field, a captcha image showing the characters "vyia", and "Submit" and "Reset" buttons.

4. Effect_04_FancyBox

You can use this effect to display the form fields as Lightbox:

The image shows the same form as above, but it is displayed within a dark grey FancyBox lightbox. The lightbox has a title "Click me" and a close button (X) in the top right corner. The form fields are filled with: "Name: SuperUser Account", "Email: admin@dnngo.net", and "Captcha: dgqt". The "Messages" text area is empty. The "Submit" and "Reset" buttons are visible at the bottom of the form.

Also you can set the animation in Lightbox though Form Options interface.

5. Effect_05_HoverFancyBox

There will be a Contact Us button on the left side of the screen, the form will display as Lightbox on clicking this button.

Also you can set the animation in Lightbox though Form Options interface.

Result Options

1. You can set the text to be displayed after the submission is done successfully.

Result Settings

Form Width: px or %

Results of content:

(Rich text editor toolbar icons are visible above the content field)

Result List

There are three ways to display the results in this module:

1. **Result_01_SimpleSuccess**

This is a common way to display the result.

2. **Result_02_Detail**

You can display the submission in this way, see below:

Email Sent Successfully.

Thank you, your message has been submitted to us.

[Return](#)

Name	Content
Name	SuperUser Account
Email	dnnskindev@gmail.com
Country	China

3. **Result_03_List**

You can display the submissions by all uses in this way, see below:

Email Sent Successfully.

Thank you, your message has been submitted to us.

Settings

1. Lists per page

You can set to display how much data could display in the history submission interface here.

2. Redirect results page

You can select a page and the user will be redirected here once the form is submitted successfully.

3. View User Roles

You can add other user roles so they can view the history submissions interface.

4. Captcha Settings

You can set the amount, type, width and height of the Captcha characters.

Email Settings

1. Send to admin:

The submission won't be sent to the admin until Send to admin is selected.

2. admin email:

You can set one or multiple admin emails (separated by comma) here.

3. Send to submit user

The submission won't be sent to the submitter until Send to submit user is selected.

4. Submit User Email:

You need to choose an email field here, otherwise the submission can't be sent to submitter.

5. Email Content Template

Admin is able to design the content and template to be sent.

Feature 2.2.1

1. Optimize the way how the form effects display themselves, divide the result page and submission page for you to choose from.

2. Add the ability of non-administrator to view the submission history pages.

3. Add the successful submission effect, which are submission result details and submission result lists.

Feature 1.1.0

1. Add new functionality to back up the custom filed, support import/export for the custom filed.

2. Add new functionality to export user's submission.

3. Optimize the display of form groups.

Feature 1.0.6

1. Add the TextBox control to display the logged-in user's name.

2. Add the TextBox control to display the logged-in user's mail address.

3. Add the DropDownList control to display the country.

4. Increase three fields to the module after the optimization of the the module installation,which enables it a simple contact us module.

5. Display the unfriendly issue after the optimization of packet switch.

Feature 1.0.0

1. Complete the frame construction of PowerForms module, create xml+template scheme to achieve each effect.
2. Support jQuery validationEngine, support multiple forms to be installed on one page.
3. Complete effect setting and effect display interface, develop a stable version.
4. Complete 2 form effects- basic and grouped.

License interface

1. You need to go here <http://www.dnngo.net> and register.
2. Please install the module in DNN and add it in a page. Then click the License link to obtain the Machine Key.
3. You can send one email to dnnskindev@gmail.com and tell us your Invoice ID, Machine Key and Username. After that, we will generate one piece of license information. If your site is a demo site, the license is still valid when you transfer your demo site to your live site.
4. You can go here <http://www.dnngo.net/MyAccount/OnlineAuthorization.aspx> and manage your license information.
