1 Quick Start

1.1 Instruction of wiring

The left-most wiring terminal is live line, then switch 1, switch 2, switch 3, the right-most is naught line when you look from top. Please power on the device after you have wired it correctly, then go through the following steps.

1.2 Direct Connection

1. Download and install LonHand software into your mobile phone.

For IOS system, search for "LonHand" in App Store to download and install. Also you can scan two-dimensional code as below.

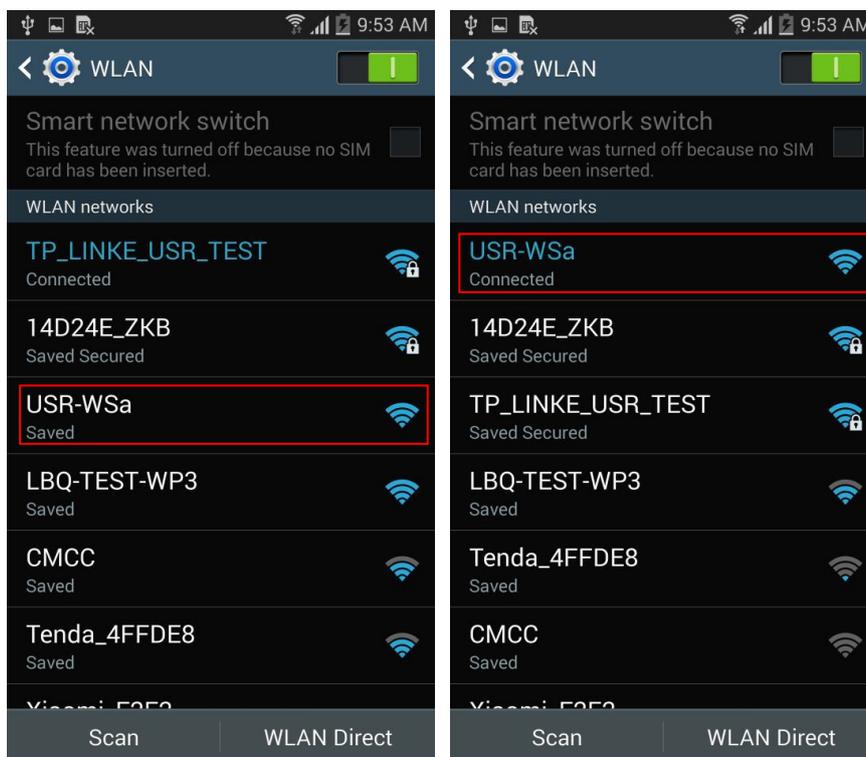

IOS

Android

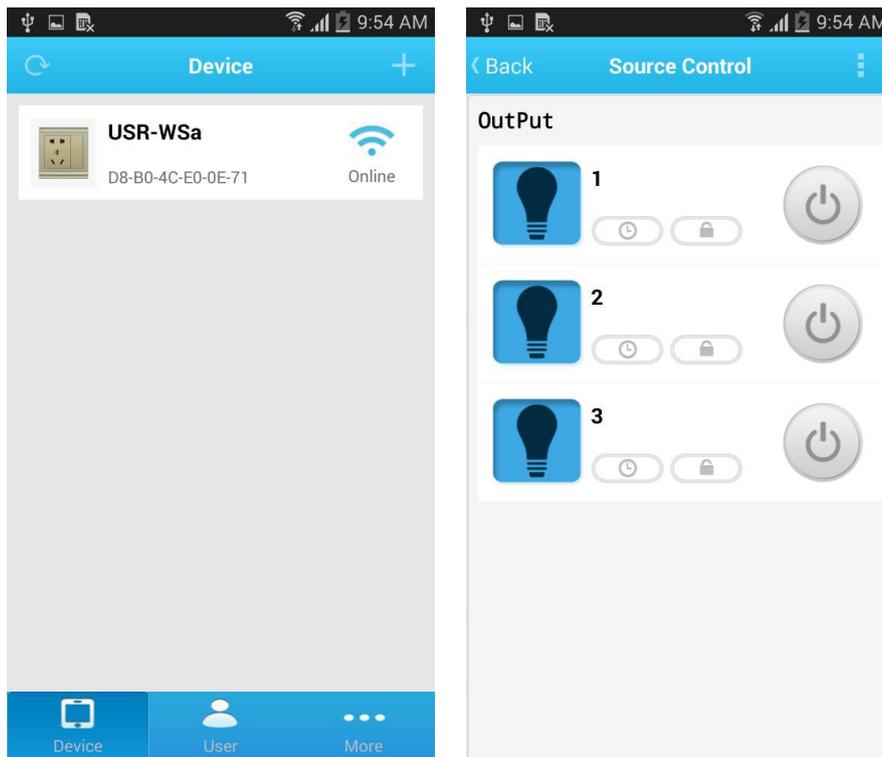

2. Connect Smartphone to USR-WSa wireless network

Find USR-WSa in WLAN, connect to the network, as shown below:

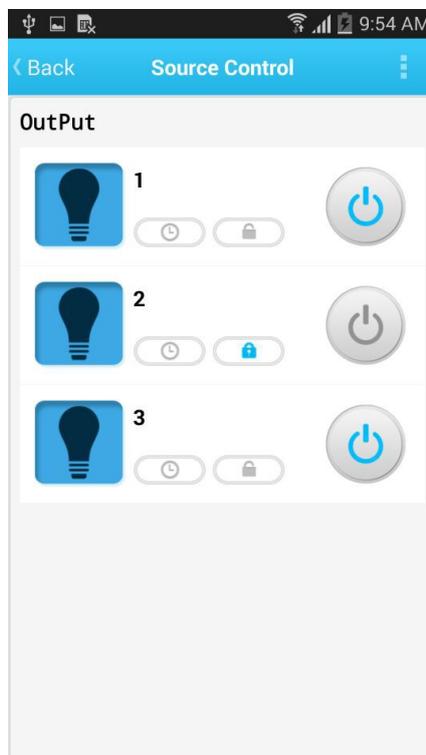

3. Control menu

Open LonHand software. Enter the device page and find USR-WSa, and click it to enter the control menu.

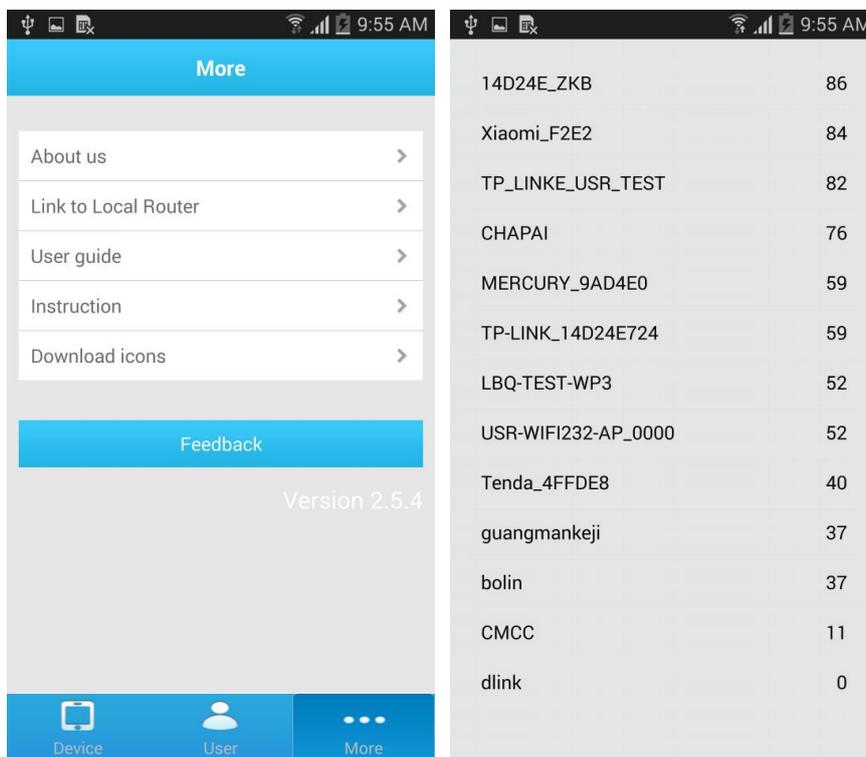

4. Control Test

You can click the switch button to control the USR-WSa now.

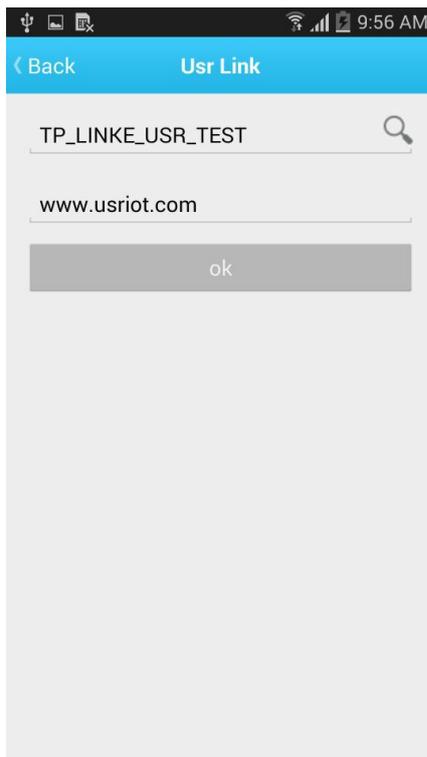

1.3 Local LAN Control

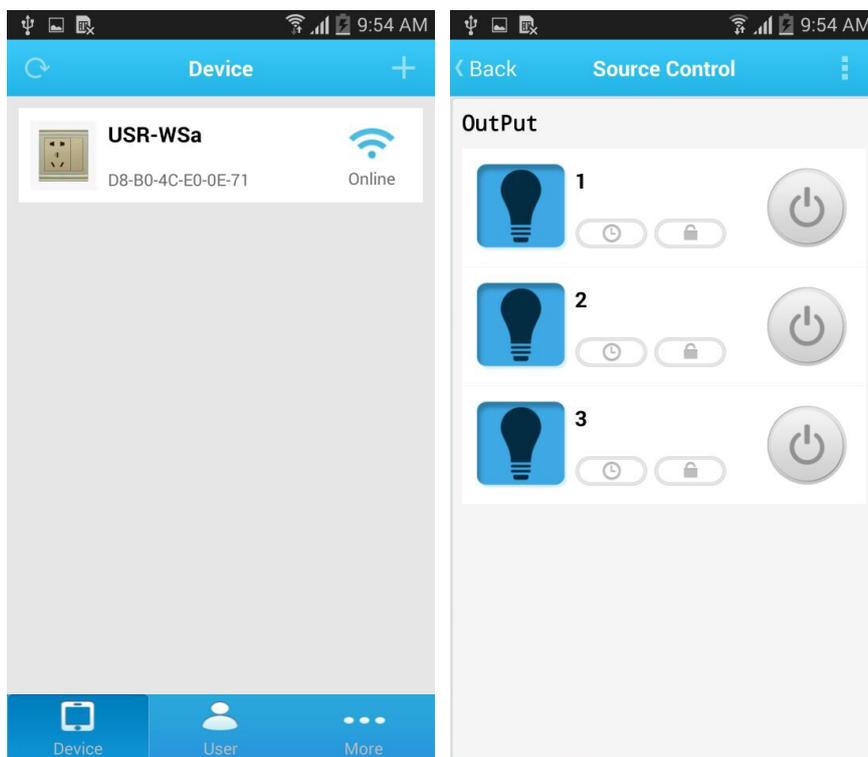

1. Connect Smartphone to USR-WSa wireless network.
Open LonHand software, then refresh the device list. Note: LonHand software on IOS system do not support this configuration now, please refer to section 3.2 for windows system.
2. Click “More” from the bottom toolbars.
Then click “Link to Local Router”.

3. Wait for searching. Then select the router you want to join. Input the password, and click “OK”.

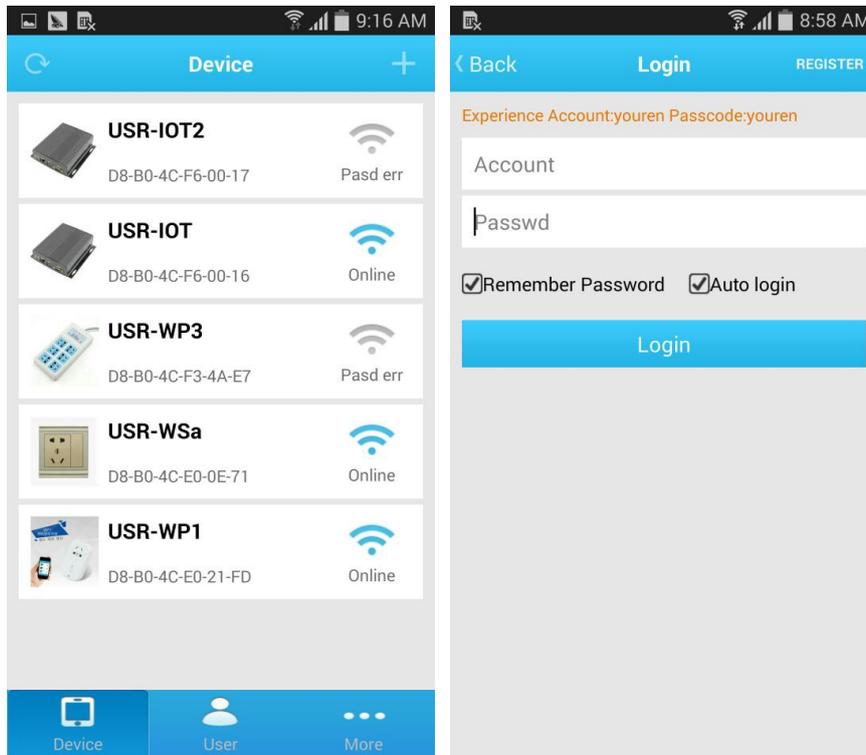

- 4. WSa will connect to the router automatically after restart.
Then You can control the USR-WSa like direct connect.

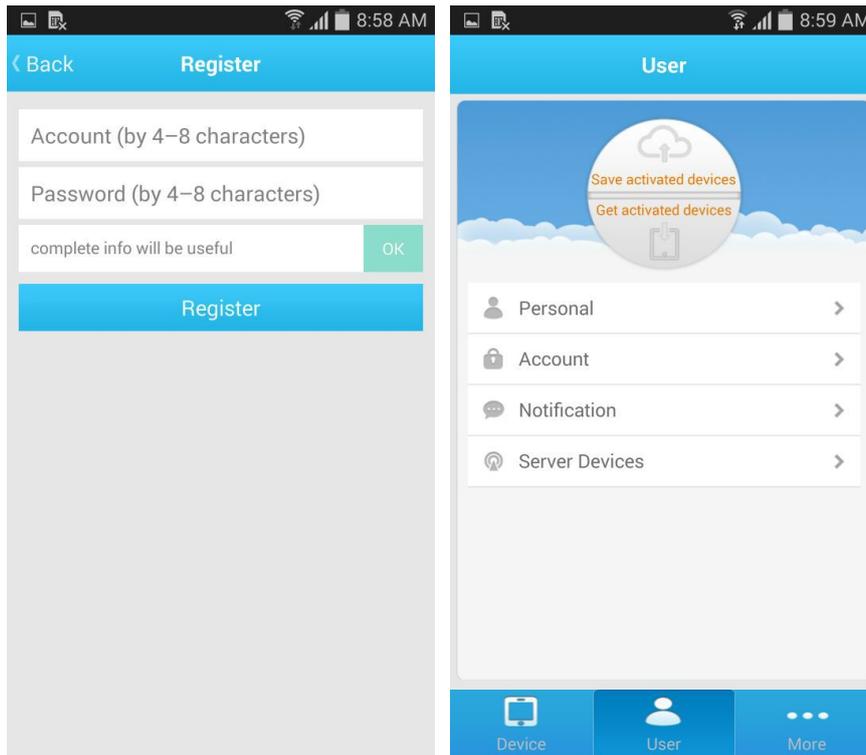

1.4 Remote Control

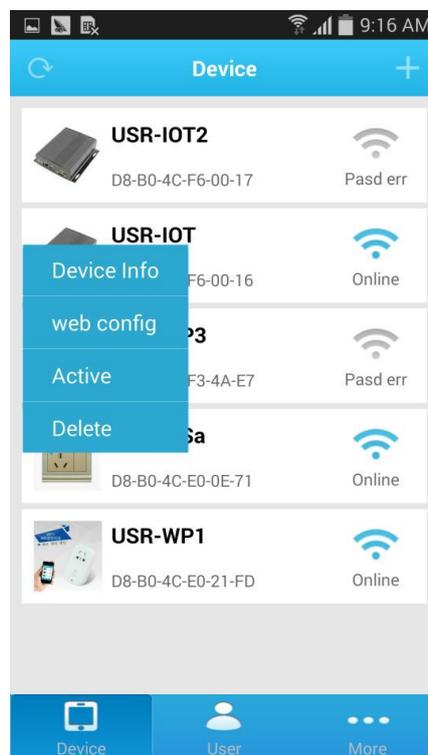

1. Connect WSa to your router (refer to the above: Chapter 1.3) then connect your smartphone to it as well.

Click “User” on the bottom toolbars, then click “REGISTER” on the top right corner, input an account and password. If you register unsuccessfully, maybe your account is same with someone else, use different name.

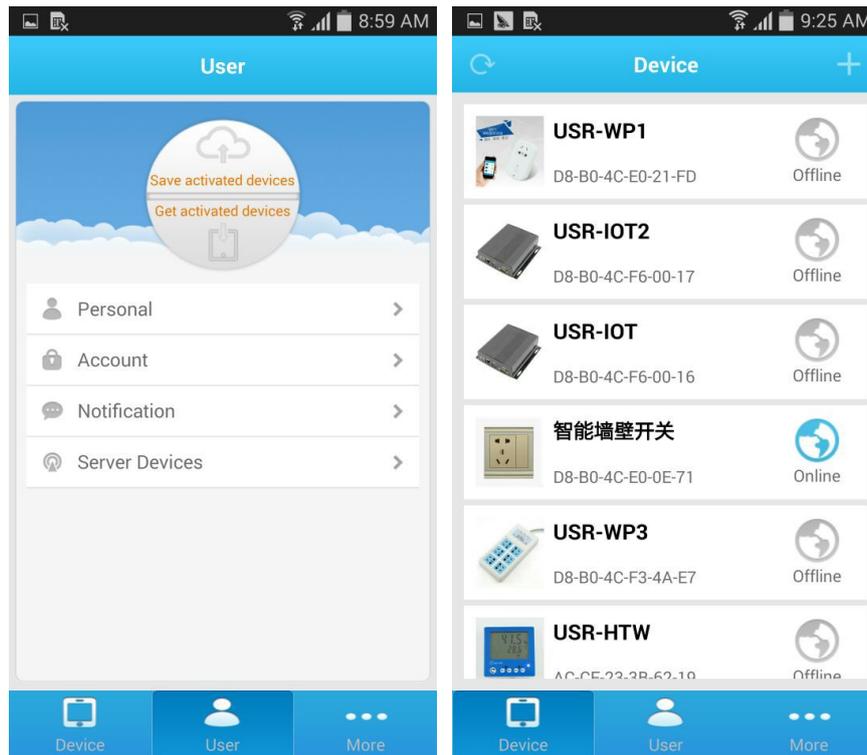

- Return to the device list, and refresh, then you can see the USR-WSa. Long press the icon, and click “Active”.

- Click “Get activated devices” in the User page. Then close the wireless network, change to 2G/3G/4G Internet or some other routers, refresh the device list.

You will see the wifi icon become a remote icon, now you can control it.

2 Product Introduction

2.1 Product Description

The USR-WSa wall switch whose relays can be switched on or off through internet, is WIFI branch of LonHand series product, and is designed for smart-home application.

LonHand series control terminals are developed for the application in the field of Smart home, Internet of Things, Industrial controlling and so on. They are suitable for rapid deployment, especially for mobile application because the USR-WSa can be controlled by your cell phone. They can operate with WIFI connection compared to traditional wired connection. These devices are an ideal choice to realize remote control.

These series product are suitable for household application to build smart home for more comfortable life. Also it can be used in industry and agriculture for low cost, high efficiency in intelligent control of the devices. You are capable to carry out more effective cost control and gain higher profits, because there's no big change and upgrading of your owned equipment under wireless remote control, you can make full use of your original product without more costs.

2.2 Product features

- WIFI interface, remote control switch
- Support AP/STA
- Support Usrlink quick network configuration function

- Support password authentication for safety control, default password admin
- Up to 5 timing tasks each switch
- Control software supports five platform: Windows, MAC, IOS, Android, Webpage, you can choose freely.

2.3 Hardware specifications
