

MANUALLY ENTER PREGNANCY SCANNING DATA

These instructions describe how to set up the indicator for recording data against animals using EID where the data is likely to be different for each animal, e.g. manually entering pregnancy scan data. This sheet assumes there is no weighing occurring.

STEP 1:

If required, set up a field for data entry in the File Data screens.

To set up a data field, press , **FILEDATA**.

Set up field options, as required.

For more information about setting up data fields, see the XR3000 User Manual.

In this example, a file data field has been set up to record pregnancy scan status (Preg SC).

Note: PREG SC Type is set as a Number.

STEP 3:

To select a file, press **FILES** then scroll to the new file.

Note: It is good practice to start a new file each time a new session is started. You should name the file relevant to the job you are doing, this is good practice for record keeping.

STEP 4:

Optimise the system for the task being performed.

Press , **SYSTEM**.

As animals are not being weighed, set Weight Recording to **Off** in order to increase the speed of data entry.

Tick ID Entry Creates File Rec to allow the XR3000 to record data without weighing.

However, if you are weighing change Damp System to Superdamp III (Sheep) and Weigh Recording to Manual. Also untick "ID Entry Creates File Rec".
