### Introduction

The software-based License (see License) allows to install and use software packages without hardware keys (dongle, pros, etc).

Two types of License are available: demo license and full-time license.

- the demo license allows to use the software package for a limited period (normally 30 days) without performance restrictions.
- the full-time license allows to use the software package without time-limits.

For each PC running the software package You need to activate a license.

To activate one demo license it's only necessary to execute the procedure described in the following pages.

To activate one full-time license or convert one demo license into a full-time license it's necessary to get from CNI informatica a personal Activation Code. To get this code fill in the registration form with Your data and System ID (take it using License Manager tools) and send them by fax or e-mail to:

CNI informatica. FAX #: +39,0544,80635 Internet e-mail: register@cniinformatica.it

WARNING: Activate the full-time license only on the system used to work with the software package. The full-time license is specific for the system where the license is activated and it's not possible to transfer it to another system. For the use on different or more than one system, it's necessary to get one specific Activation Codes for each system.

## **First step**

To use a software package with a software-based license (without hardware key) proceed with the following steps:

- Install the software package (see installation manual for the procedure details).
- Install the License Manager from the distribution disk (see installation manual for the procedure details).
- Run the License Manager icon and activate a demo license (see procedure Activate one demo license p.4). Now it's possible to use the software package for a limited period (normally 30 days) without performance restrictions.
- Fill in the License registration card with all the data and send it by fax or e-mail to CNI informatica. In a few days CNI informatica will send back the specific Activation Code.
- Using this code update the demo license into a full-time license or enable other software packages in a full-time license (see procedure **Update the license** p.8).

## **License Manager**

The License Manager (LicMan) is a software tool that can manage the software license. Using LicMan is possible to activate one demo license, convert one demo license into one full-time license and update one existing license to enable new software packages.

To run the LicMan click the following icon:

The main window of LicMan appears as below:

License Manager main window

The main window contains the follow button:

This button shows the license information (see **View license information** p.**3**) The same function is available in the menu bar with the View option.

This button allows to manage the license right (see **License management** p.4) The same function is available in the menu bar with the Register option.

This button activates the trouble-shooting options.

This function is not available in the menu bar.

WARNING! Only authorized people can use this options. An unauthorized use of this option could corrupt the license data and could completely block the use of software packages.

This button shows the LicMan information (see **Information** p.12) The same function is available in the menu bar with the Help option.

This button terminates the execution of LicMan The same function is available in the menu bar with the Exit item inside the File option.
