Launching Qualtrics

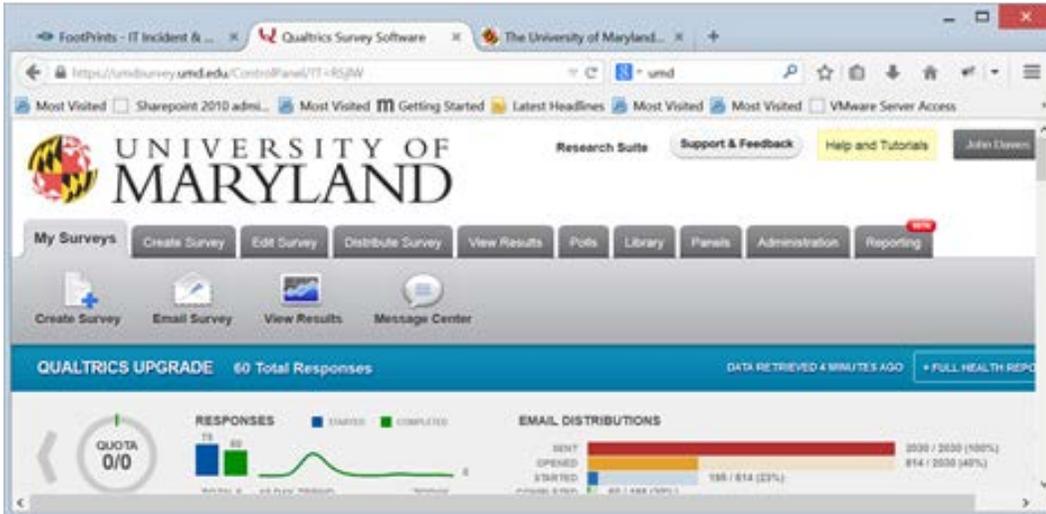

To begin using Qualtrics:

1. Go to <http://umdsurvey.umd.edu>
2. On the login page, enter your User Name/email address and password. First time users, you can create an account.
3. In creating your account, *please* use your UMD credentials and not your departmental or college domain. This helps the Brand Administrators, and Qualtrics support identify users.
4. Follow the steps after you logon.

My Surveys

After you successfully log in to Qualtrics, you will find yourself in the **My Surveys** Dashboard. This area allows you to create and edit surveys, view results from surveys you have created, share surveys with other users, create duplicate copies or surveys, access the Qualtrics library and perform several other functions.

Tasks Toolbar

After you have created a survey, it will show up at the bottom of your **My Surveys** Dashboard, otherwise known as your Tasks Toolbar. The following features are included:

★	Active	Name	Responses	Creation Date	Modified	Tasks
★	<input type="checkbox"/>	MKT Introduction to Qualtrics Sample Modified on: Sep 23, 2010	0	September 22	September 23	

Star Marker: The star marker icon can be clicked to turn it bright yellow. This feature has no function other than letting you mark surveys in a special way. If you have many surveys but don't utilize the folder system, this method will allow you to locate surveys easily.

Active Survey: Once a survey has been activated, it will be marked with the green checkmark. However, it can still be deactivated without being deleted. Simply click on the green checkmark and confirm in the popup window that you do want to close the survey. It can be reactivated again using the same methods for initial activation. The link will remain the same.

Responses: The number of attempted responses is shown. This value includes complete AND incomplete responses.

Creation Date: Date of survey creation

Modified: Date of last modification

Edit: Takes you to the Edit Survey Tab

Results: Takes you to the View Results Tab

Send: Takes you to the Distribute Survey Tab

View: Preview the survey as it will appear to respondents. To move quickly through the survey, click —Ignore Validation—. You will not have to answer questions to advance.

Ignore Validation
-more options-

[Click Here to Start Over](#)

Collaborate: This function allows you to share your survey with other users. This is great for when you are doing collaborative work with other users and would like everyone to have access to a survey.

1. In order to share a survey, you will need to know your collaborators' Qualtrics usernames. Or, you can go through the —Address Book— which will list everyone in your brand that has an account. Usually their username is the same as their unique name. Some usernames are an individual's full email address.
2. Once you have the username in there, their name should appear. If this is the correct person, click —Add—. When you do this, a whole list of options will appear to the right. This is where you choose what editing capabilities this person will have. By clicking —Select All— you are giving them full ability to edit the survey.

Copy: Copy the survey to another user's account or library or make a copy of the survey in your own account. This is very useful when you are developing several different versions of a survey or trying to decide on which survey design to use.

Translate: This option allows you to create foreign translations of your question and answer choices, either using "google translate" or by typing your own translations

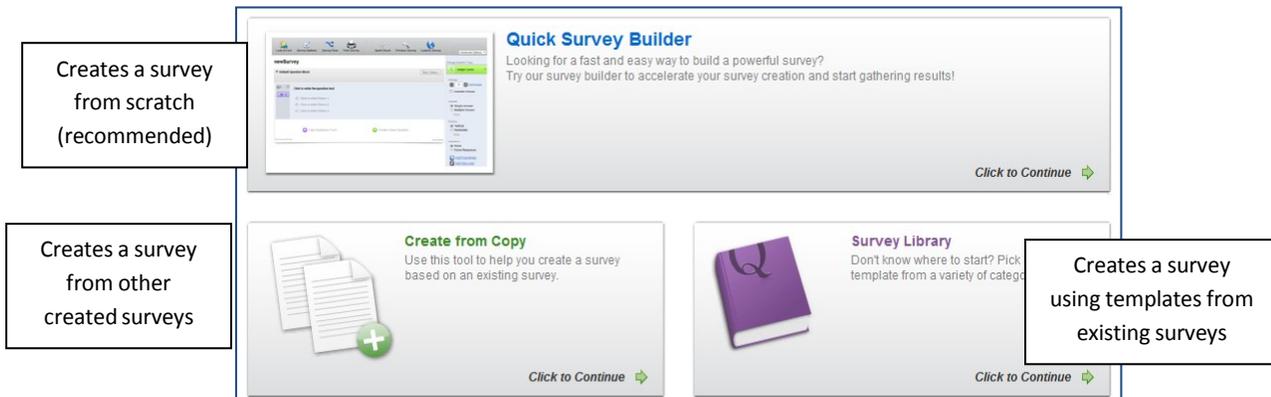

Delete: Deletes the entire survey from your account. It will also be deleted from the accounts of people sharing it. This only appears for surveys that you own. For surveys that are shared with you, but you do not own, you will see a —remove— icon that will remove the survey from —My Survey— but will not delete the survey from the owner's account.

Creating a New Survey

To create a new survey:

Click on the **Create Survey** icon in the gray menu area located in the middle of the Dashboard page. From there, you will see the following page:

From the Quick Survey Builder option, begin assembling your survey. Give your survey a name, create a folder to organize your surveys (optional) and click **Create Survey**.

The 'Create a New Survey' form contains the following fields and buttons:

- Survey Name:** Text input field containing 'Test'.
- Folder:** Dropdown menu with 'Test Folder' selected.
- Account for Survey:** Dropdown menu with 'My Account: Andre Louis' selected.
- Buttons:** 'Cancel' (with a red X icon) and 'Create Survey' (with a green checkmark icon).

Folder Management (Optional)

If you anticipate that you will have a large variety of surveys, folders are useful. However, having folders is not necessary.

1. Click on the —My Surveys tab
2. Click on the —Manage Folders link located above the survey list
3. To add a folder

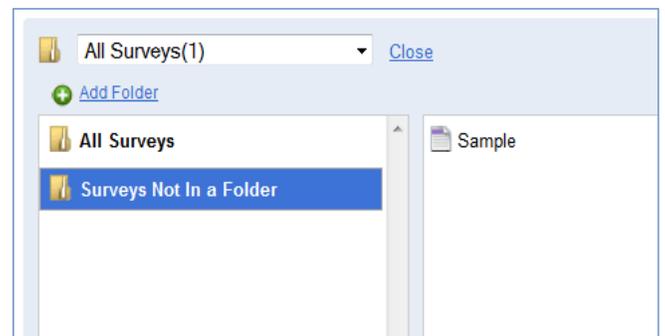

Click  [Add Folder](#)

Type in the new name of your folder

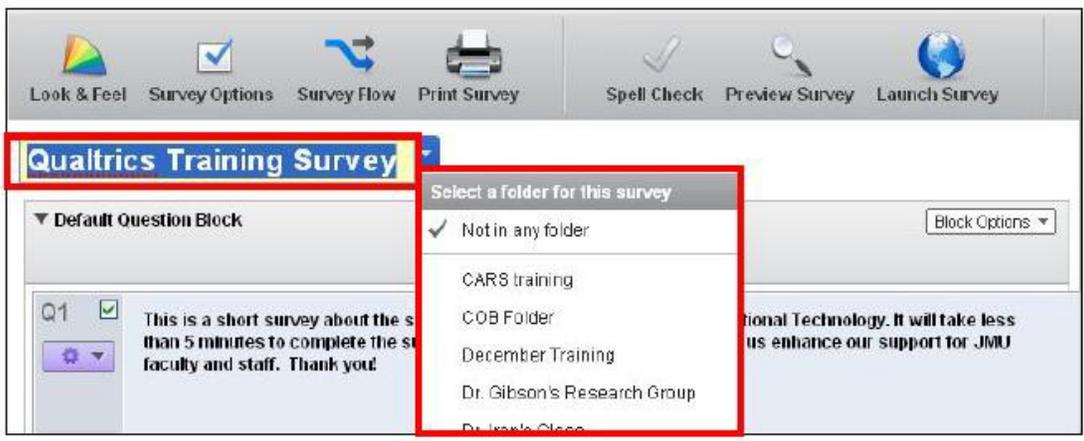

4. To rename a folder, double-click the folder name.
5. To delete a folder

Select a folder

Click the red circle to delete  [Delete Folder](#)

Surveys can be re-arranged into different folders with the **Select a folder for this survey** drop-down list to the right. As a side note, in the same view, the title of a survey can be changed easily by clicking on it in the survey edit view and typing the changes.

Adding Survey Questions

To add questions to your survey:

Either click **Create a New Question** (to start a new question from scratch) or click **Copy Questions From...** (to select a question from a library of surveys).

Copying Questions

Qualtrics allows users to copy questions either from a library of survey templates designed by Qualtrics or from any user-created survey libraries. To use this option, simply select a library, select a survey, and review/select specific survey questions. Once the question you want is added to your survey, you can edit it as necessary.

To copy questions from a library:

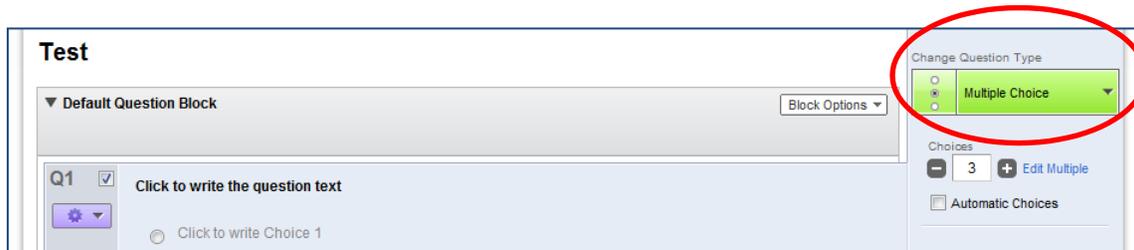

1. In Edit Survey, click on —Copy Questions Fromll at the bottom of the page to select questions from an existing template.
2. Select the library from which you want to take questions.
3. Select the survey from which you want to take questions.
4. Highlight the desired question or group of questions from the left-hand panel.
5. Add the questions to your survey (blue button at bottom of right panel).

****Note:** If at any time you wish to exit out of a pop-up window, simply click on an area outside of the window and the pop-up will disappear.**

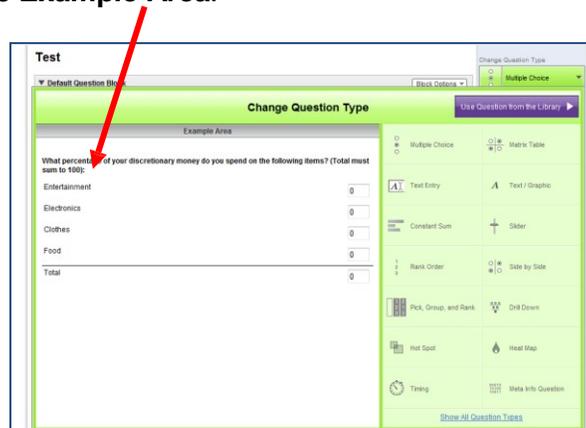

Create a New Question

To create a new question from scratch:

1. Click **Create a New Question**
2. Determine the **Question Type**. By default, **Multiple Choice** is selected. However, you can use the drop down menu in the green box on the right to determine the kind of question you would like to use.

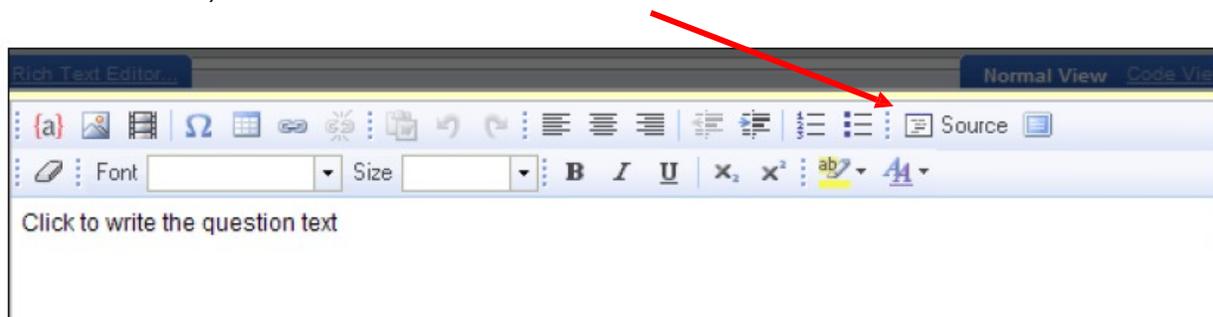

To find the question type you need, click the green box. Move your mouse over each type to see a preview of the question displayed in the **Example Area**.

3. Navigate through the question types available. You can also expand the list by clicking the **Show All Question Types** at the bottom of the green window.

- Click in the yellow text box to **enter your question text**.
- If you click on the **Rich Text Editor** prompt above the text box, you can format the question using the WYSIWYG formatting option (—What You See Is What You Get!). Here, you can insert images and symbols, add hyperlinks, use various font editing tools, and add HTML code (by clicking on the **Source** button)

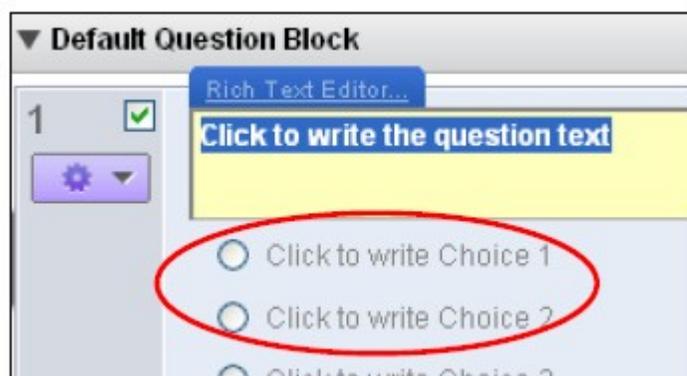

- Optional: Create a label for each question. Labels are a helpful tool to shorten the text that will appear if you decide to view results by question or in the columns if you export your data into programs like Excel or SPSS. When you change the label of a question, it is also used when setting up **Skip and Branch Logic**, **Quotas**, and **Triggers**.

To create a label, find and click the icon at the bottom left of the text field.

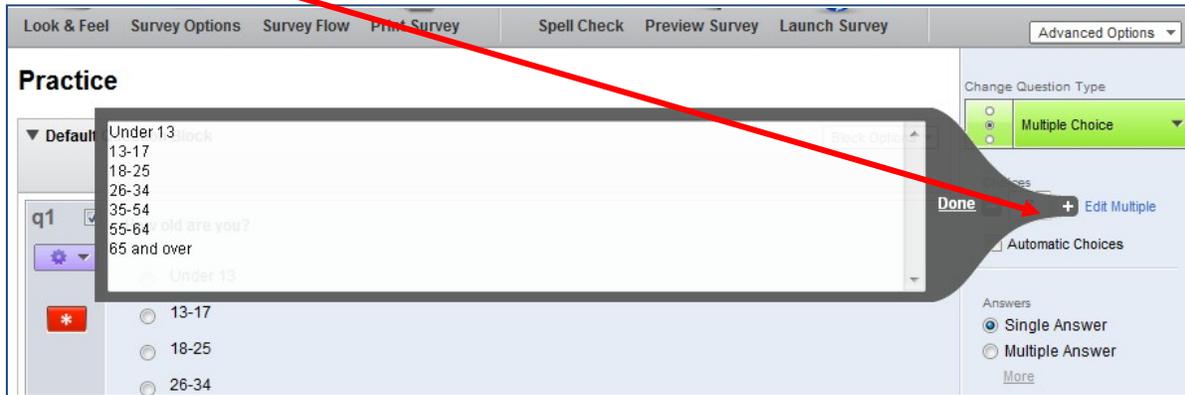

Initially, you will see a preview of the current question text. Edit the label name to whatever you desire. If you would like to remove a label and go back to using the full question text, simply click **Reset**.

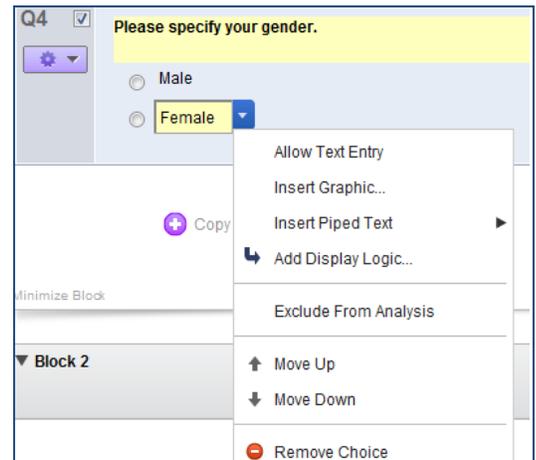

- To type in response options, click on **Click to write Choice 1** (2, 3, etc). You may also copy and paste responses from a Word document or text file...

...or click **Edit Multiple** to type or copy/paste a series of response options in the gray window:

- Optional: By clicking on individual responses, a blue down with a down arrow will appear. This option allows you to add further dimension to your answer options. You can create a text box to allow users to enter textual responses, insert graphics, apply display logic, exclude certain options from analysis, etc. The options available depend on the question type you select.

Repeat steps 1-8 to add additional questions.

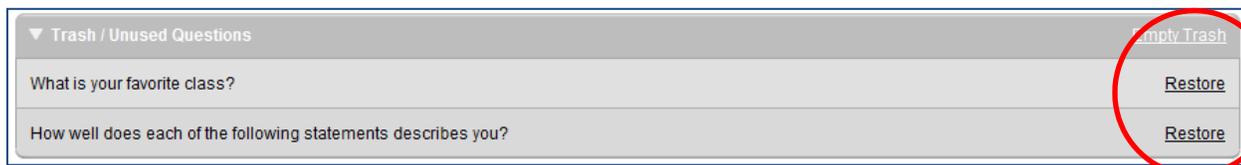

Rearranging, Deleting, and Restoring Questions

Qualtrics also allows you to control the placement, deletion, and restoring of questions. To add a new question before/after a question you have already created:

Move your mouse to the question:

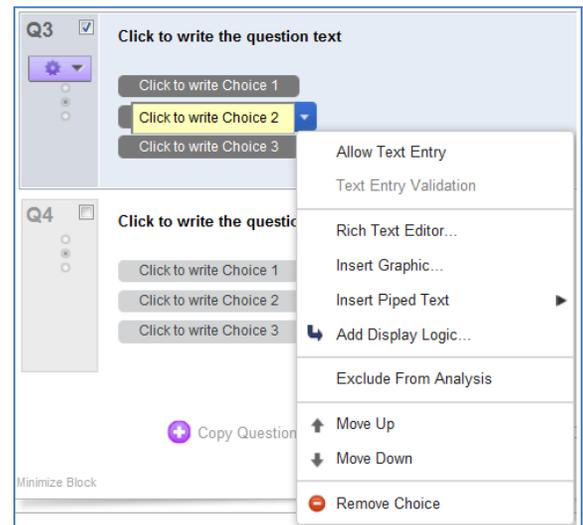

If you delete a question, it is not discarded immediately. Instead, Qualtrics will move it into the **Trash/Unused Questions** area at the bottom of the page. To restore a question, simply click **Restore**. To discard deleted questions, click **Empty Trash**:

Question Types in Qualtrics

Multiple Choice

- Multiple or single answer
 - Single answer choices are shown with radio buttons
 - Multiple answer choices shown with check boxes
 - Drop down menu offers single answer choice
 - Select box offers single answer choice
 - Multiple select box offers multiple answer choices
- Arrange choices vertically, horizontally, in columns, drop-down list, or select box
- Text choice options available when you click on the blue arrow to the right of the text
 - Allow Text Entry
 - Rich Text Editor
 - Insert Graphic
 - Exclude from Analysis
- Validation options vary with the question type

Matrix Table

Allows a series of identically structured questions to be presented as a group rather than individually

Bipolar Matrix (with options only on opposite sides)

How would you rate the Canon Powershot SD400?				
Overpriced				Affordable
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Complicated				Simple
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Out of Fashion				Stylish
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Short Battery Life				Long Battery Life
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Likert Scale Matrix

How would you rate your experience with Customer Support?					
	Very Satisfied	Somewhat Satisfied	Neutral	Somewhat Dissatisfied	Very Dissatisfied
Quality of service	<input type="radio"/>				
Helpfulness of representatives	<input type="radio"/>				
Promptness of response	<input type="radio"/>				

(Position of the vertical divider can be changed with a mouse drag left or right)

Matrix with Text Entry

Please rate each vehicle make on a scale of 1 to 10 (1 = Completely agree, 10 = Completely disagree):				
	Toyota	Ford	Nissan	Chevrolet
I would have confidence in	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Is dependable	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
I love the way they look	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Profile Matrix

Please help us characterize your Internet service provider(s):				
Connection Type:	Fiber Optic	Cable	DSL	Dial-Up
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Time of Day Used Most:	Morning (6 am - 12 pm)	Afternoon (12 pm - 6 pm)	Evening (6 pm - 12 am)	Graveyard (12 am - 6 am)
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Geographic Location:	Northeast	Midwest	South	West
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Satisfaction With Speed Achieved:	Very Fast	Fast Enough	Neutral	Not Fast Enough
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Constant Sum Matrix

Out of all the patients prescribed Product M, please allocate 100 points to describe the proportion of these patients by severity for each of delivery device? (Please be sure the columns sum to 100%)		
	With Nebulizer C	With Fine Mist Inhaler P
Mild	<input type="text"/>	<input type="text"/>
Moderate	<input type="text"/>	<input type="text"/>
Severe	<input type="text"/>	<input type="text"/>
Very Severe	<input type="text"/>	<input type="text"/>
Total	<input type="text"/>	<input type="text"/>

Rank Order Matrix

Please rank the following attributes for each car from 1 (best) to 4 (worst).

	Engine Power	Comfort	Handling	Reliability
Honda Civic	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Ford Focus	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Jeep Wrangler	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Lincoln Mercury	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

1. This question type can only be found under the Matrix category, not within the Rank Order type
2. This question type will require validation to ensure respondents enter the correct numbers
3. Respondents cannot continue the survey until they correct their errors in ranking

Constant Sum

Draggable Bars

What percentage of your discretionary money do you spend on the following items?

	0	10	20	30	40	50	60	70	80	90	100
Entertainment	██████████										
Electronics	██████████										
Clothes	██████████										
Food	██████████										

Constant Sum With or Without Total

What percentage of your purchases are made with these cards?

	<input type="text"/>
	<input type="text"/>
	<input type="text"/>
Total	<input type="text"/>

Rank Order

Drag and Drop Rank Order

Rank the following movies in order of preference (most preferred item at the top):

Star Wars	1
Pride and Prejudice	2
True Lies	3
Titanic	4
Lord of the Rings	5

1. The Javascript code for drag and drop ranking does not always work in all browsers – radio button or manual ranking is recommended
2. Instructions for the respondents may be necessary for this question as some may try simply double clicking on the numbers.
3. Once a row is selected it can be dragged and dropped to any location and moved multiple times

Radio Button Ranking

Rank the following credit cards, a rank of 1 being your most favorite and 3 being your least favorite.

	1	2	3
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Manual Ranking

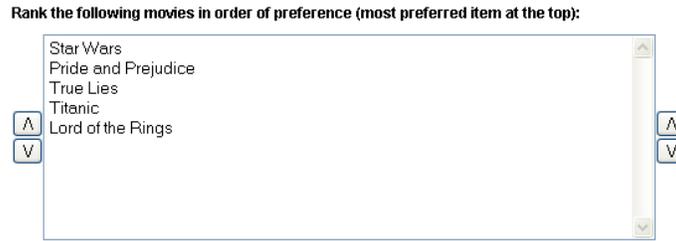

Rank the following Disney movies in order of preference from 1 to 4 (most preferred) :

<input type="checkbox"/>	Aladdin - Favorite Character:
<input type="checkbox"/>	Mulan - Favorite Character:
<input type="checkbox"/>	The Little Mermaid - Favorite Character:
<input type="checkbox"/>	Beauty and the Beast - Favorite Character:

1. This question type will require validation to ensure respondents enter the correct numbers
 - a. If respondents enter an invalid number or repeat numbers, they are given a red warning message

- b. Respondents cannot continue the survey until they correct their errors in ranking

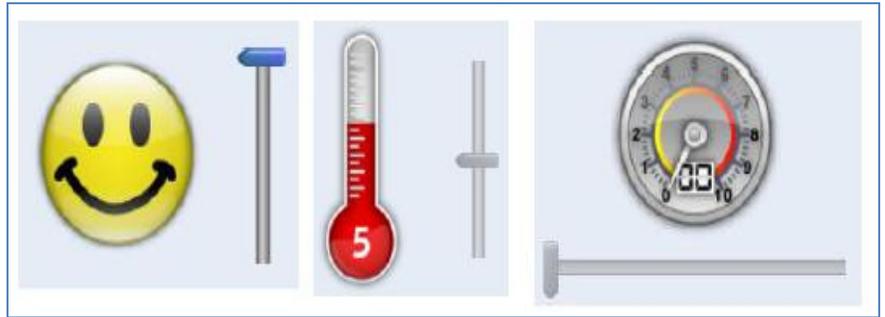

Box Arrangement Ranking

- 1) Respondent must first highlight one choice and then move it to the desired location
- 2) Choices can be moved as many times as needed.

Sliding Scale/Slider

1. Slider questions are similar to Constant Sum questions but allow clicking/dragging visually to select a particular number
2. Sliding Scale questions have rather silly graphics and can be found using —view all question types
3. Can position text to the side, up or below the scale
4. Numeric scale of this question too limited for many uses

Side-By-Side Matrix

Several different questions with different scales/responses can be asked for the same categories.

1. Drop-down menu also an option for each portion of the question
2. In the output, the questions are treated separately. You can't see all answers that apply to just one category (i.e. pizza) at once. Rather, you will see how one question was answered for each category.
3. One downside to side-by-side question is the difficulty enforcing any type of validation
4. Choosing validation will require respondents to answer ALL portions of the question
5. This example taken from Qualtrics

How are your pizza cravings satisfied?							
	How often do you order from these restaurants:			How do you order it?			Comments
	Always	Sometimes	Never	Carryout	Delivery	Dine in	
Pizza Hut	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text"/>
Domino's	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text"/>
Little Caesar's	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text"/>
Papa John's	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text"/>

demonstrates this problem. Validation for this question can't be used because if —Never is selected in the first question, then the next question isn't even applicable and would have to be left blank. Similarly, requiring comments isn't good practice.

Pick Group and Rank

1. Drag and Drop into Predefined Categories
 - a. Items on the left-hand side can be randomized
 - b. Horizontal arrangement of category boxes can also be used
 - c. In data output file, each item will appear as own variable and show group value (0 or 1) or name

Please select your car from the following options:

Year

Make

Model

2. Group and Ranking Question
 - a. This question type allows the option of predefined groups or allows respondents to name the groups
 - b. When respondent places an item into the category, the numerical ranking for that item will appear
 - c. In data output file, two columns will appear for each item. One will indicate which group they were moved to; the other will indicate what the rank within the group was. If groups were respondent defined the name that corresponds to the group number will appear in the final columns
 - d. This question does not use drag and drop. An item must be highlighted and then an arrow button clicked to move the item to the desired group. Instructions may be needed.

Drag the following animals into their respective groups.

Items	Mammal	Fish
Dog		
Whale		
Trout		
Monkey		

Drill-Down

1. Question requires downloading a .csv file that has columns with the feasible answers for each drop-down category
2. Selection made from one drop-down list impacts what appears on the next list
3. Drop-down boxes remain grey until a selection is made. Requires respondents to sequentially enter the information
4. NOTE: The —Force Responsell validation link that normally appears to the right of questions is not currently visible when a Drill-down question is used. To access that feature, the Advanced Options link will have to be selected from the purple drop-down button to the left of the question.

Please group and rank the following movies into the categories they best represent:

Items	Action	Comedy
Armageddon		
Bye Bye Birdie		
Contact		
Emma		
Ever After		
Field of Dreams		
GATTACA		
Heart & Souls		
Star Wars		
Saving Private Ryan		
War of the Worlds		
You've Got Mail		

Question Choices Answers Options Advanced Preview & Label

ID	Order	Text	GraphicOptions	Text Entry
<input type="checkbox"/>	1	Year	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	2	Make	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	3	Model	<input type="checkbox"/>	<input type="checkbox"/>

Delete

Text Position: Left

Advanced Function: Choice Options

Graphics Questions

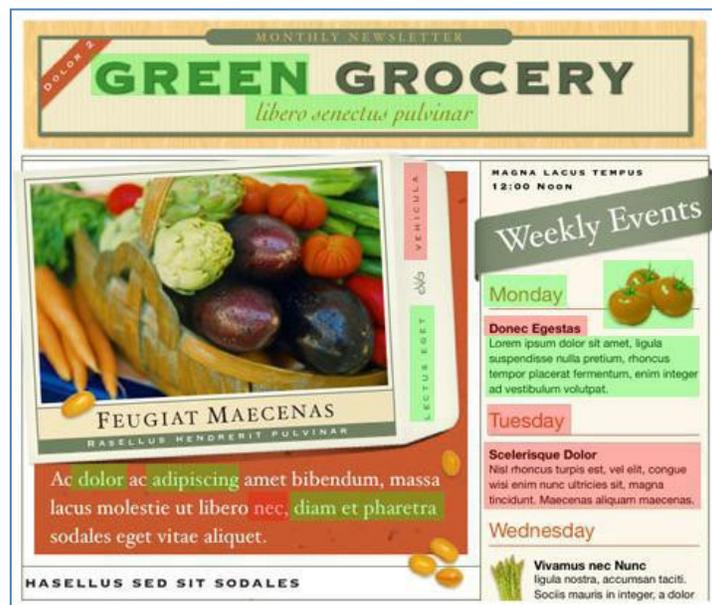

Heat Map

1. Respondent clicks on location of a picture that grabs the most attention
2. The x/y coordinates of the site selected by a respondent are recorded
3. Heat map can be generated by summing the data points taken from all respondents
4. Redder areas indicate most visually interesting
5. Bluer areas indicate some visual interest

Hot Spot

1. Key areas of the picture are defined by the experimenter
2. On/Off: Respondent highlights areas of interest
 - a. Green indicates an area of interest
 - b. Clicking a second time will deselect area of interest
3. Like/Dislike: Respondent highlights the areas with red or green overlay
 - a. Red signifies an area the respondent doesn't like
 - b. Green indicates an area that the respondent likes

A mockup of a newsletter layout. At the top, it says 'MONTHLY NEWSLETTER' and 'GREEN GROCERY' in large green letters, with the tagline 'libero senectus pulvinar' below it. The main content area is divided into several sections. On the left, there's a large image of a grocery basket with the text 'FEUGIAT MAECENAS' and 'RASELLUS HENDRERIT PULVINAR' below it. To the right of the basket image is a vertical sidebar with the text 'VERICULA' and 'LECTUS PSEY'. Below the basket image is a paragraph of placeholder text: 'Ac dolor ac adipiscing amet bibendum, massa lacus molestie ut libero nec, diam et pharetra sodales eget vitae aliquet.' At the bottom left, it says 'HASELLUS SED SIT SODALES'. On the right side, there's a 'Weekly Events' section with a date 'Monday' and a small image of tomatoes. Below that is a 'Tuesday' section with a paragraph of placeholder text. At the bottom right, there's a 'Wednesday' section with a small image of a plant and a paragraph of placeholder text. The overall design is clean and modern, using a mix of green, red, and neutral tones.

Editing Survey Questions

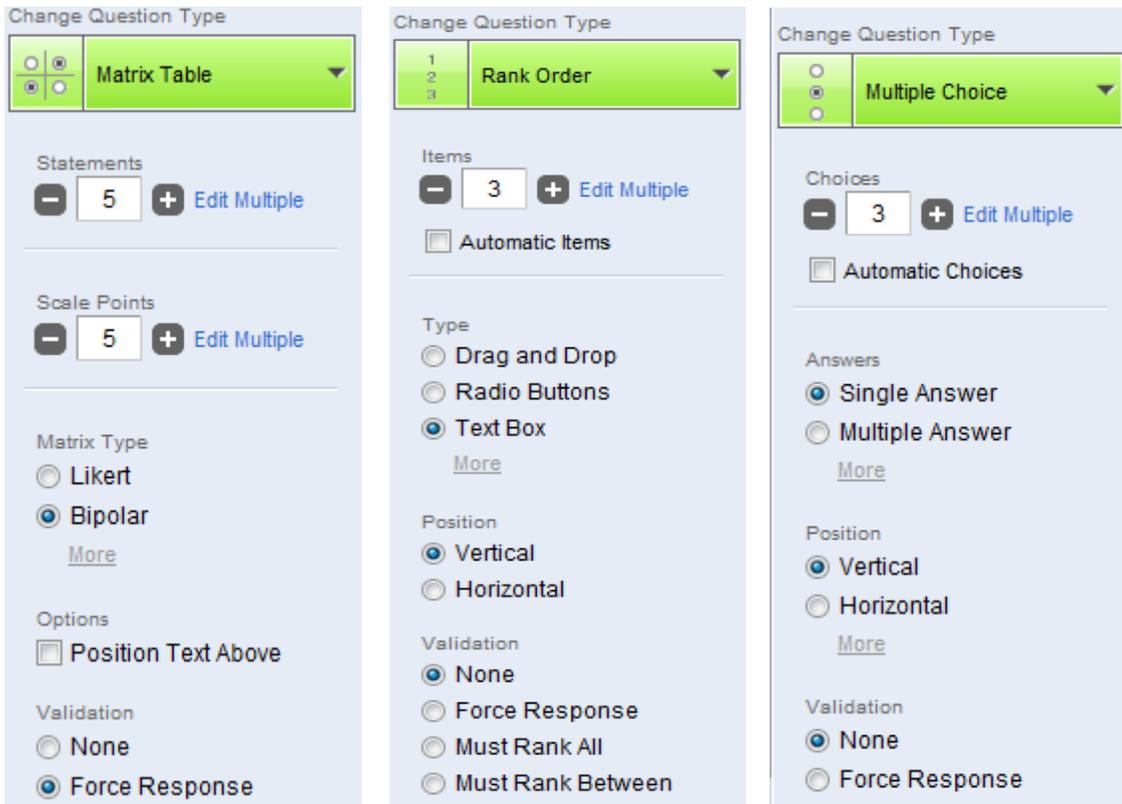

As you are creating new questions, you also have the ability to modify its properties using basic editorial tools. After each question is created, an editorial bar will appear to the right of that question. Some editorial functions include: adding/subtracting the number of choices/statements/scale points (using the plus and minus signs), determining if the question has **a single or multiple** responses, whether the responses appear **vertically or horizontally**, and whether or not responses are **forced** (i.e. questions that *must* be answered before the survey respondent can continue; noted by the  icon in the left section of each question).

****Note:** The type of editorial toolbar you see is based on the question type you select. Not all question types will have the same editorial options. For example, consider each of the following question types:

Matrix:

Rank order

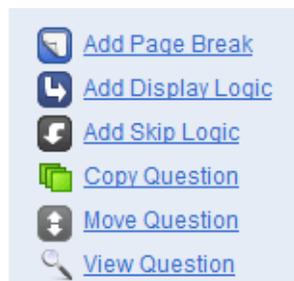

Multiple choice

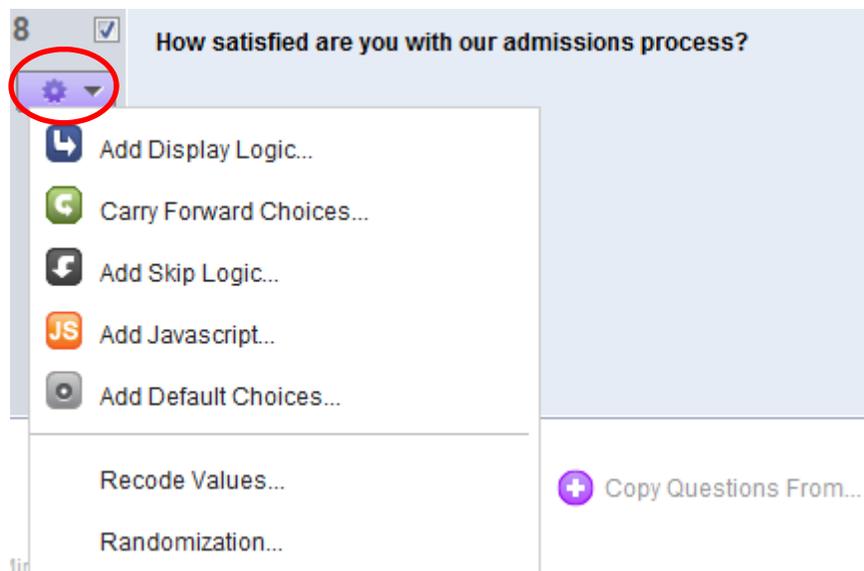

The image displays three side-by-side screenshots of the Qualtrics editorial toolbar for different question types. Each toolbar is titled "Change Question Type" and features a green dropdown menu at the top.

- Matrix Table:** The dropdown is set to "Matrix Table". It includes a "Statements" section with a minus sign, a text box containing "5", and a plus sign, followed by a blue "Edit Multiple" link. Below this is a "Scale Points" section with a minus sign, a text box containing "5", and a plus sign, followed by a blue "Edit Multiple" link. The "Matrix Type" section has radio buttons for "Likert" and "Bipolar" (which is selected), with a "More" link below. The "Options" section has a checkbox for "Position Text Above". The "Validation" section has radio buttons for "None" and "Force Response" (which is selected).
- Rank Order:** The dropdown is set to "Rank Order". It includes an "Items" section with a minus sign, a text box containing "3", and a plus sign, followed by a blue "Edit Multiple" link. Below this is a checkbox for "Automatic Items". The "Type" section has radio buttons for "Drag and Drop", "Radio Buttons", and "Text Box" (which is selected), with a "More" link below. The "Position" section has radio buttons for "Vertical" (which is selected) and "Horizontal". The "Validation" section has radio buttons for "None" (which is selected), "Force Response", "Must Rank All", and "Must Rank Between".
- Multiple Choice:** The dropdown is set to "Multiple Choice". It includes a "Choices" section with a minus sign, a text box containing "3", and a plus sign, followed by a blue "Edit Multiple" link. Below this is a checkbox for "Automatic Choices". The "Answers" section has radio buttons for "Single Answer" (which is selected) and "Multiple Answer", with a "More" link below. The "Position" section has radio buttons for "Vertical" (which is selected) and "Horizontal", with a "More" link below. The "Validation" section has radio buttons for "None" (which is selected) and "Force Response".

Qualtrics also has other editorial tools available for survey questions. These tools are located at the bottom of the editorial toolbar:

These Advanced Question Options (and more) can also be found by clicking on the purple icon in each question box:

Adding Page Breaks

This function creates a marker denoting when survey contents are a part of a new page. The new page(s) will be seen once the survey goes live. To add a page break, select a question by clicking on it. Then, click **Add Page Break**. This will insert a page break below the selected question. In survey edit mode, a page break will look like this:

Like questions, page breaks can be moved up or down using the arrows and added before/after questions, or deleted.

Carry Forward Choices, Statements, and Scale Points

All choices, selected responses, text entered in answer fields, or scale points can be carried over from one question to the next.

The screenshot shows two questions in a survey editor. Question 8, "How satisfied are you with our admissions process?", has five radio button options: Very Dissatisfied, Dissatisfied, Neutral, Satisfied, and Very Satisfied. Question 26, "How satisfied are you with our admissions notifications?", has five radio button options: Very Dissatisfied, Dissatisfied, Neutral, Satisfied, and Very Satisfied. A red circle highlights the options for both questions. A text box next to Question 26 states: "The response options from Question 8 were carried forward to Question 26". At the bottom, a green bar contains a "Carry Forward" button, a dropdown menu set to "All Choices", and a dropdown menu set to "How satisfied are...missions proces".

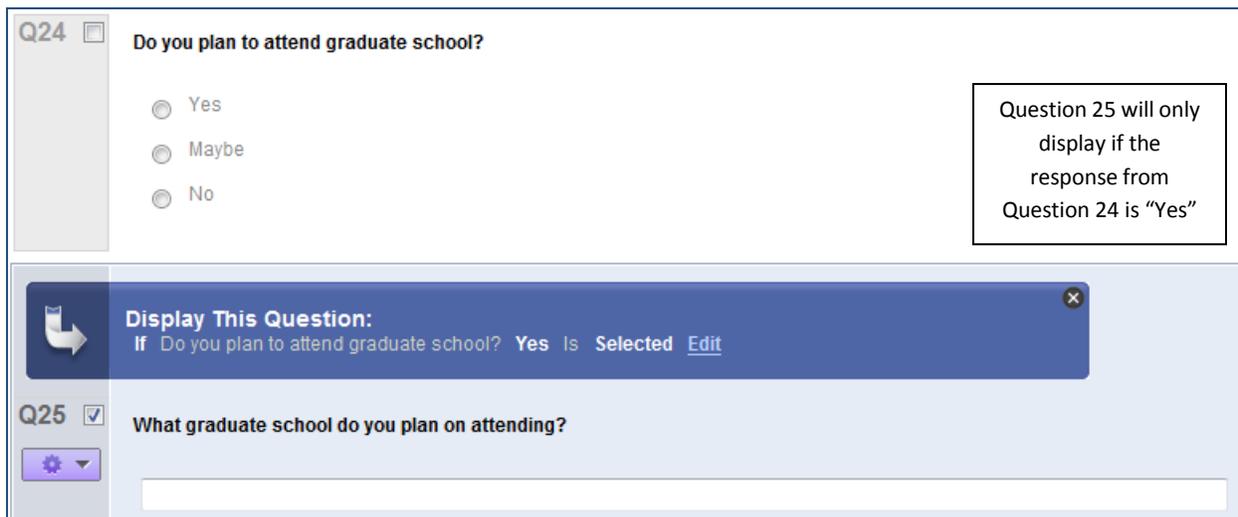

Add Display Logic

This function allows a question to appear to your respondents only if they answer a previous question in a certain way.

To add Display Logic:

1. Click **Add Display Logic** from the editorial toolbar
2. Select the desired *dependent* question and all the conditions you would like satisfied (again, the selected question will be highlighted light blue).
3. Click Save.

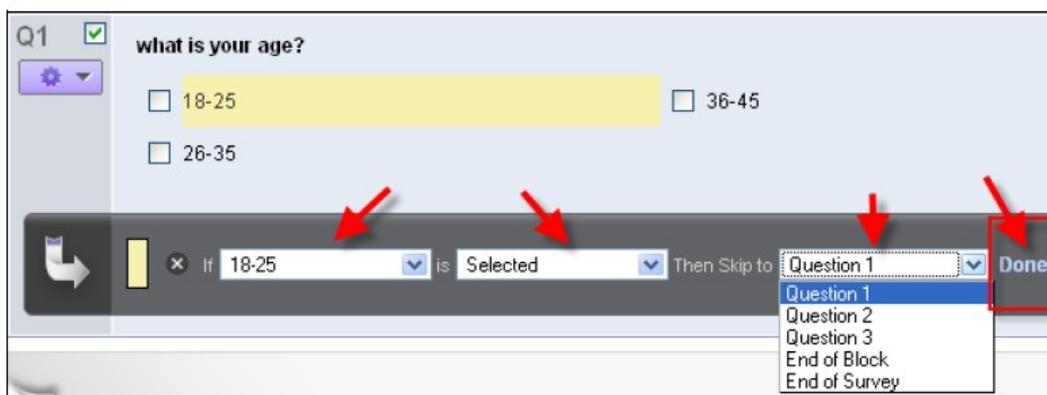

The screenshot shows the "Display Logic" configuration window for the question "What graduate school do you plan on attending?". A yellow banner at the top states: "Will only display this Question if the following condition is met:". Below this, a row of dropdown menus is configured: "If Question" (dropdown), "Q24 Do ...school?" (dropdown), "Yes" (dropdown), "Is" (dropdown), and "Selected" (dropdown). At the bottom right, there are "Close" and "Save" buttons.

Add Skip Logic

This function allows a respondent to skip questions that are not relevant to them. To add Skip Logic:

1. Select a question—the skip logic will be inserted within the selected question.
2. Click on Add Skip Logic (found at the bottom of the editorial tool bar for a selected question)
3. Click Done.

This is how the skip logic appears in the question list. Fill in the logic information to complete the skip logic process. If a specific answer is selected (OR not selected OR displayed OR not displayed), then Qualtrics will skip to a specific question.

****Display Logic** differs from **Skip Logic** in that **Display Logic** still follows the full survey progression and only displays questions based on previous responses, while **Skip Log** can conceivable move respondents to various portions of the survey.

Copying Questions

A question and its corresponding responses can be copied in the same survey to reuse again by selecting **Copy Question**.

Recode Values

This function allows you to rename variables and recode numerical values

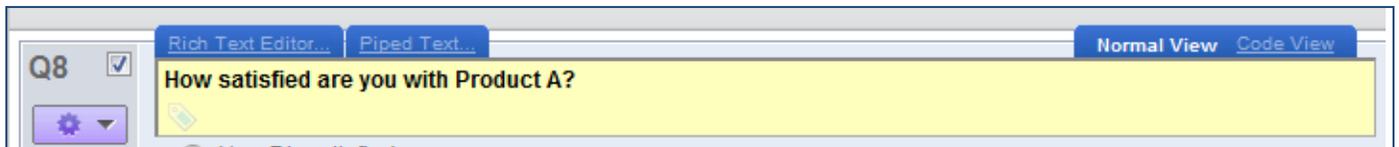

1. Assign a value by typing the number in the yellow boxes
 - a. It is always wise to check what current numeric values will be assigned to each choice on a scale
 - b. Sometimes the physical spacing of choices on a scale will result in Qualtrics skipping values (i.e. 1,2,3,6,7,10,12)
2. Rename the variable by typing the name into the pink fields
3. Recode numeric labels in the yellow fields
4. Changes will be reflected in the data file after downloading data

Number	Variable Name	Label
5	VD	Very Dissatisfied
4	D	Dissatisfied
3	N	Neutral
2	S	Satisfied
1	VS	Very Satisfied

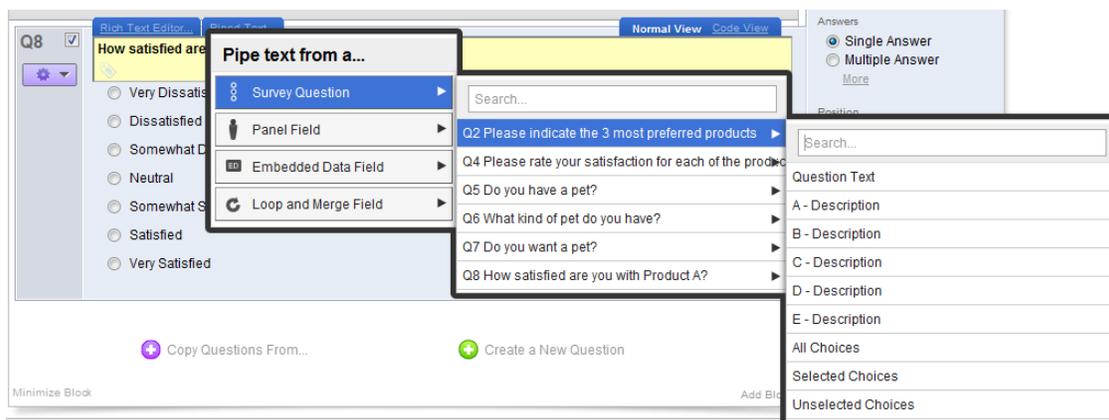

Piping (Smart Text)

Carry over a response or written text from a previous question into the text of another question.

1. Click the Piped Text tab above your question's text

2. Select the desired question/panel field/embedded data/loop and merge field from the menu

3. Specify if a selected choice or entered text response to the question should be used
4. A placeholder similar to the text below will be added in your question's text
`#{q://QID1/ChoiceGroup/SelectedChoices}`
5. A PAGE BREAK MUST BE ADDED SOMEWHERE BETWEEN THE QUESTION PIPED FROM AND THE QUESTION PIPED TO

NOTE: Graphics can be piped into a question as well if they are stored as html code. The html code for the desired graphic would be the text inserted. The codes would be stored as embedded data.

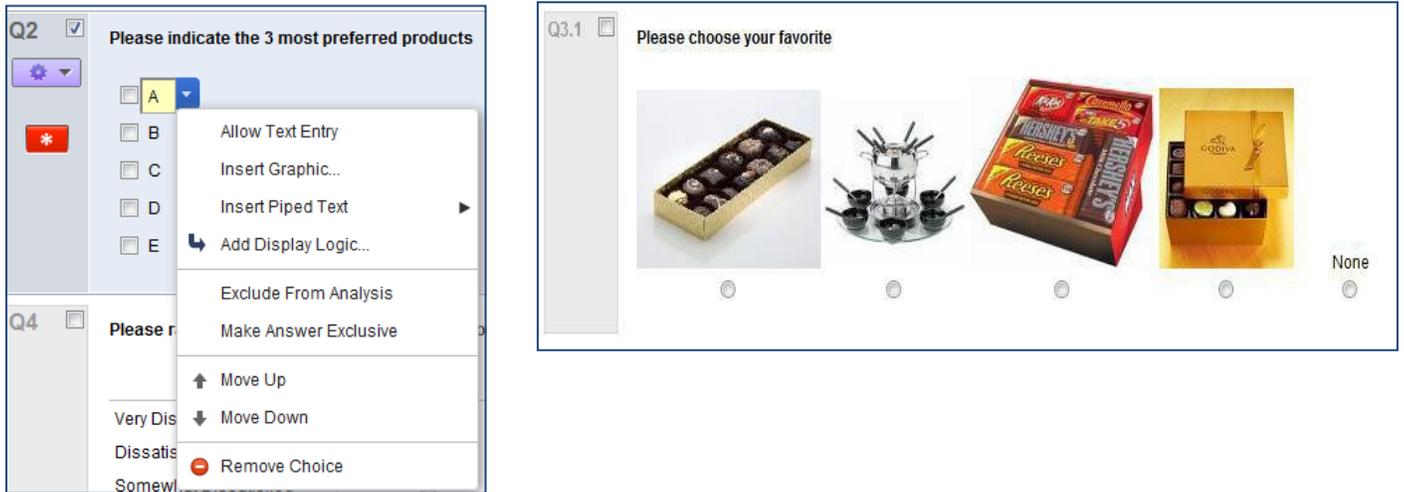

Example: This example uses the selection in Q9 to populate the question text in Q10.

Choice Randomization

This tool randomizes the order in which the choices appear in a particular question. For question randomization, please refer to the block advanced options. For block randomization, refer to survey flow advanced options. You have the option to randomize all choices, present only a subset of choices, or further customize the randomization using a dedicated subset and/or random selection of a subset.

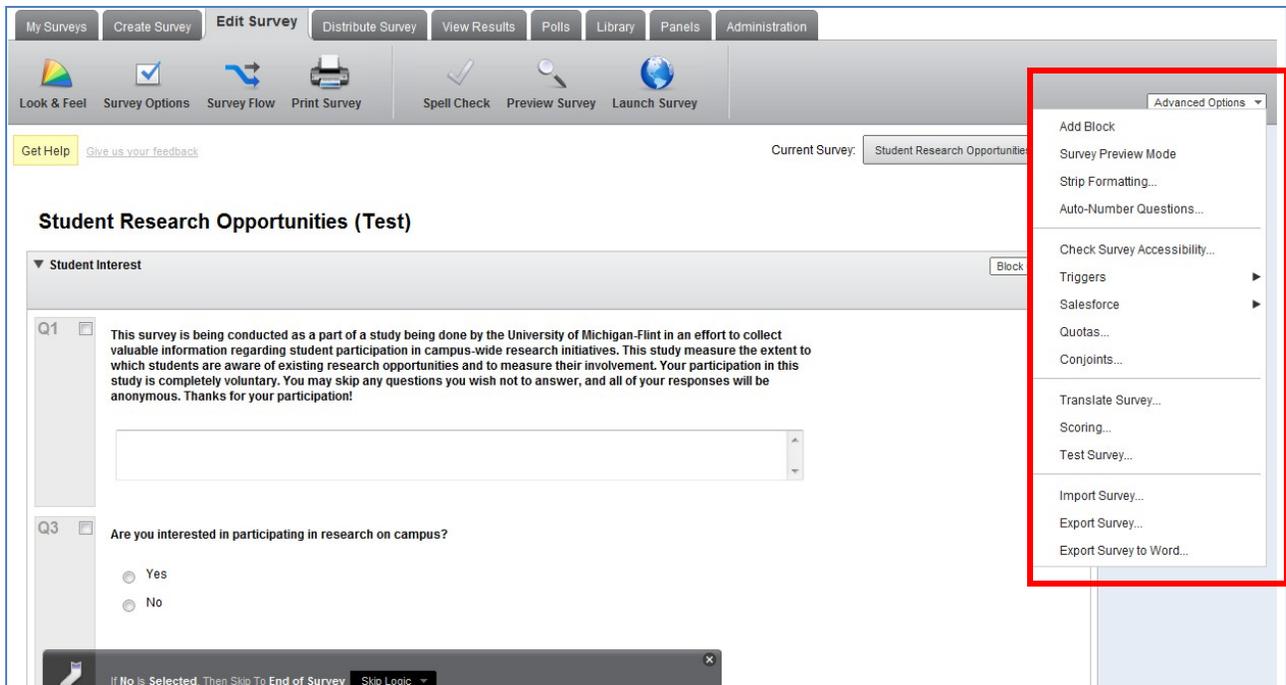

Adding Graphics as Choices

Choices can include graphics by clicking the blue arrow next to the text of a choice. A menu with —Insert Graphicll will appear.

Advanced Survey Options

After an advanced option is selected, a popup window will appear that allows you to set the specific parameters.

Advanced Survey Options include:

1. Add Block: Allows you to add a new block into your survey

2. Survey Preview Mode: Allows you to view your survey in compact view
3. Strip Formatting: Removes all text formatting for selected questions; returning them to default settings
4. Auto-Number Questions: Automatically re-numbers your questions. Click on the numbering type to change. Remember that these numbers will not appear to the survey responders.
 - a. Sequential numbering rennumbers the questions from beginning to end starting with 1 (Q1, Q2....)
 - b. Block Numbering rennumbers the questions based on the block. (Block 1: Q1.1, Q1.2; Block 2: Q2.1, Q2.2)
 - c. Internal ID numbering will change the question label to the original question ID generated when you first created the question. (QID1, QID2, etc. – The prefix will remain Q)
 - d. Changing the Prefix allows you to change the prefix to any label you wish to use. Note that SPSS requires variable labels to start with letters, not numbers.
5. Check Survey Accessibility: Determines whether your survey is accessible to people with disabilities.
6. Email Triggers
 - a. A trigger can be used to send an email message to yourself or others each time a survey is completed (default) or each time a certain condition is met during the survey (click —add a condition)
 - b. In the body of the email, a summary of that particular survey response can also be sent.
 - c. The email trigger is useful when you are using Qualtrics for a reservation form or some other —surveyll that will have simple and periodic responses that would be more convenient to receive through email, rather than logging into Qualtrics repeatedly.
 - d. An advantage to using the trigger to send responses through email is that the recipient doesn't need to know how to use Qualtrics to retrieve results.

The screenshot shows the 'Triggers' configuration window. At the top, there is a green checkmark icon and an envelope icon next to the title 'Send An Email On Survey Complete: [Add a Condition](#)'. Below the title, there are three input fields: 'To Email Address:', 'Subject:', and 'Message:'. The 'Message:' field is a large text area. At the bottom right of the configuration area, there is a 'Finish Editing' link. Below the configuration area, there is a link 'Add Another Trigger'. At the bottom of the window, there are two buttons: 'Close Without Saving' (with a red X icon) and 'Save Triggers' (with a green checkmark icon).

7. Panel Triggers
 - a. A trigger can be used to add a respondent to an existing panel each time a survey is completed (default) or each time a certain condition is met during the survey (click —add a condition)
 - b. Essential panel fields will be updated; you can also add question responses and other embedded data (add additional fields)

The screenshot shows the 'Triggers' configuration window for adding a respondent to a panel. At the top, there is a green checkmark icon and a house icon next to the title 'Add Respondent To Panel On Survey Complete: [Add a Condition](#)'. Below the title, there are two dropdown menus: 'Panel Library:' and 'Panel:'. Below these, there are three rows of dropdown menus for 'First Name', 'Last Name', and 'Email', each with a 'Select Question...' dropdown. Below these fields, there is a link 'Add additional fields'. At the bottom right of the configuration area, there is a 'Finish Editing' link. Below the configuration area, there is a link 'Add Another Trigger'. At the bottom of the window, there are two buttons: 'Close Without Saving' (with a red X icon) and 'Save Triggers' (with a green checkmark icon).

Advanced Survey Options (continued)

8. Quotas: can be set based on responses to a question or based on embedded data (embedded data must be included in the survey flow).

NOTE: Use caution when using the quota feature to shut down a survey after a certain number of completed responses. If many people have entered the survey simultaneously, there could be problems with the survey shutting down properly and/or too many survey responses will be collected.

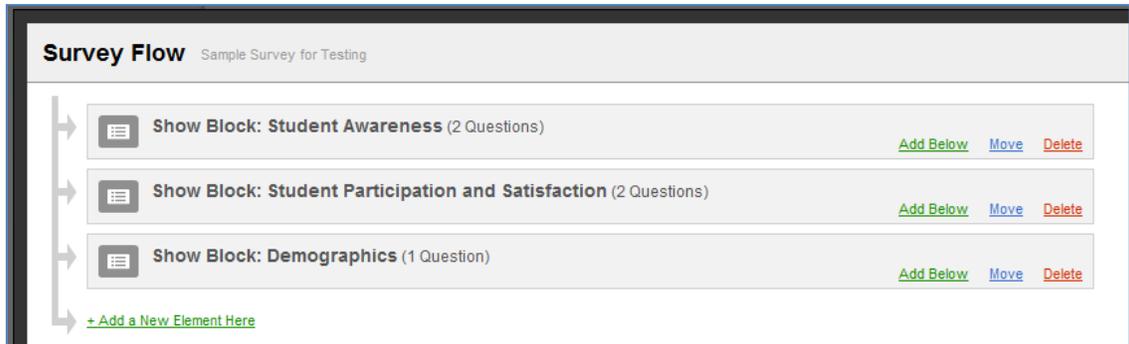

The screenshot shows the 'Quotas' configuration window. At the top, it states: 'The quota count will be incremented each time the following condition is met'. Below this, there is a dropdown menu for 'If' with 'Quota' selected, and a dropdown for 'Has Been Met'. A 'Quota Name' field contains the placeholder text 'Enter The Quota Name Here'. The 'Quota Limit' is set to '100', with a yellow tooltip that reads: 'This is the number of times the quota condition must occur for the quota to be considered met.' There are two radio buttons: 'One quota for all the response sets.' (selected) and 'Each response set has its own quota.' Below, a dropdown for 'When the quota has been met, then:' is set to 'Do Not Display a Question...'. A 'Question:' dropdown is set to 'QID5 Do you have a pet?'. At the bottom right of the main panel is a 'Finish Editing' button. Below the main panel is a blue link 'Add Another Quota'. At the very bottom are two buttons: 'Close Without Saving' (with a red X icon) and 'Save Quotas' (with a green checkmark icon).

9. Conjoints: This module creates a series of questions for self-explicated conjoint analysis to determine relative importance of attributes of products, services etc.
10. Translate Survey: This option allows you to create foreign translations of your question and answer choices, either using "Google translate" or by typing your own translations.
11. Scoring: Scoring allows you to set point values for multiple choice, matrix, and text entry questions. Feedback can be displayed after each question and at the end of the survey.
12. Test Survey: The test survey feature allows you to generate responses to your survey before you actually collect data. This allows you to determine how your data will appear. You can determine how many responses you would like to generate, and then go to "View Results" to view how the data looks.
13. Import Survey: Your survey can be imported as an XML (.qsf - Qualtrics Survey Format) or .txt file.
14. Export Survey: Your survey can be exported as an XML (.qsf - Qualtrics Survey Format) file. Please make sure that the correct current survey is selected in the "Current Survey" drop down box.

For more information, visit: <http://www.qualtrics.com/university/advanced-options>

Survey Blocks

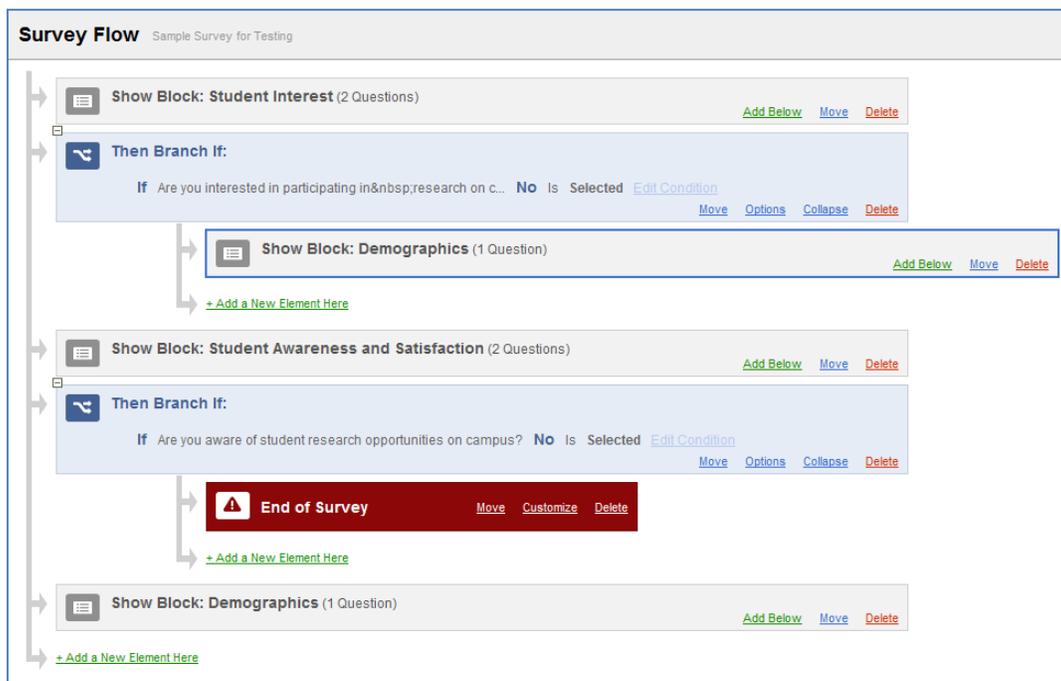

In Qualtrics, both linear and non-linear logic in a survey can be monitored with blocks. By default, Qualtrics enables questions to be added to Default Question Block. A block can house a different section of questions in a survey, and will automatically be separated by page breaks.

The screenshot above shows the survey flow of a questionnaire. In this example, three blocks —Student Interest, —Student Awareness and Satisfaction, and —Demographics has been created. Each block can contain a series of questions.

To create a block, click —Add Block option under the Advanced Options menu.

Once your blocks are created, you can arrange them according to the designed logic relation using the —Survey Flow function. Once in the Survey Flow window, use Add a New Element to determine the logic in a survey. Adding a New Element allows you to identify conditions that will trigger particular questions or move you to various blocks. You can also add new logic elements, move them to different locations, or delete them.

In this example, answering —Noll to a particular question in the —Student Interestll block will create a skip to the —Demographicsll block. Also, answer —Noll to a particular question in the —Student Awareness/Satisfaction block will lead to the end of the survey.

Advanced Block Options

Advance block options include:

1. View Block – will preview only the specific block
2. Collapse Questions – for a more compact view of the block
3. Lock Block – so that no further changes can be made
4. Question Randomization - randomize order of questions in the block
5. Loop and Merge - Series of questions that are identical except for some wording can be presented using the Loop and Merge feature

Question Randomization

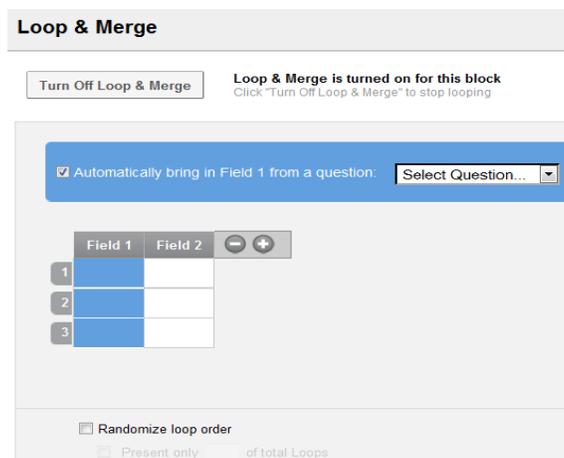

This tool randomizes the order in which the question appear in a particular block. For choice randomization, please refer to the question advanced options. For block randomization, refer to survey flow advanced options. You have the option to do one or more of the following:

1. Change the fixed order of question presentation
2. Randomize all questions
3. Randomize a subset of questions
4. Exclude questions
5. Show only a certain number of questions per page

Loop and Merge

The Loop and Merge allows you to repeat a block based on predefined values, such as embedded data, previous question choices, panel data, etc.

1. Click on —Turn on Loop and Mergell
2. Clicking on —Automatically bring in Field 1 from a Question will populate your to-be-merged values automatically.
3. If you do not populate the fields automatically, you can manually type in the values of the field. For piped text, you must already have the code ready through other sources – there is no option to generate the piped text in this window. Additional levels of the field can be added by clicking the + or – to the left of the fields.

Customize the Look and Feel of the Survey (Optional)

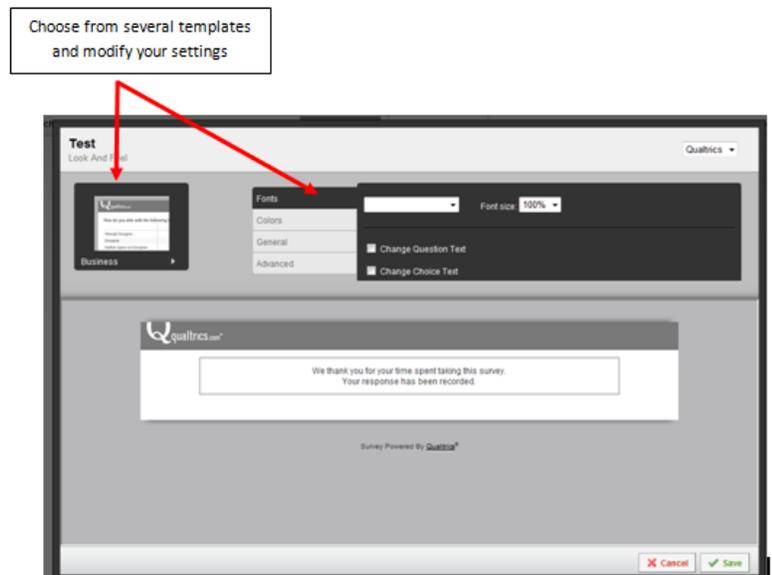

Once you have created a survey, named it, and assigned to a folder, you can format the interface (the look) of your survey. Click **Look & Feel** to edit the look of your survey

In the **Look & Feel** area of Qualtrics, you can:

- 1) Select a predesigned skin that contains colors and buttons in a wide variety of designs.
- 2) Create a header and footer for your survey that is displayed on every page
- 3) Change the background colors or fonts
- 4) Change the look of the buttons
- 5) Add a progress bar
- 6) Change the number of questions per page
- 7) Highlight or add question separators

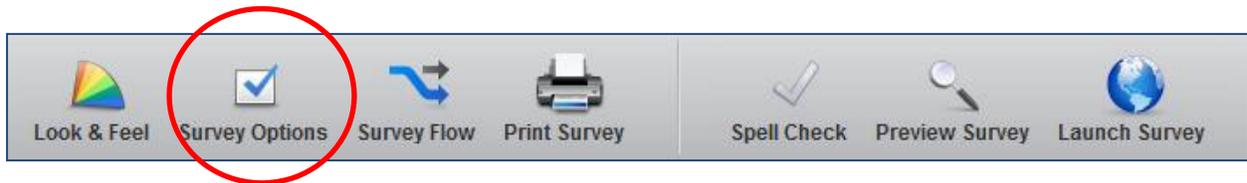

To insert a graphic to appear on every page of your survey:

- 1) In the Edit Survey tab, select the Look and Feel rainbow icon at the top of the page.
- 2) Locate the Header box, found in the upper left of this screen. Select the blue text: Edit.
- 3) The second logo from the left allows you to insert a graphic. You can either insert an image from your library or upload a new image. Click Save when you are finished.

Survey Options/Controlling Survey Conduct

Qualtrics allows you to apply certain settings to your survey options. NOTE: In order for any survey option changes to take effect, you must click —Savell at the bottom right corner of the popup window.

Survey Experience

Survey Experience 	<input checked="" type="checkbox"/> Back Button. Enable respondents to change their responses. <input checked="" type="checkbox"/> Save and Continue. Allow respondents to save and continue later. Survey Language: <input type="text" value="English"/> The language the survey is written in. <input type="checkbox"/> Show Export Tags. Helpful for survey collaboration. Survey Title: <input type="text" value="MBA Exit Survey"/> This text will appear in the browser as the window or tab title. <input type="checkbox"/> Use Custom Survey Validation Messages...
---	--

1. Select **Back Button** to enable survey takers to return to earlier pages in the survey.
2. Select **Save and Continue** to allow users to resume partially completed surveys begun at an earlier time. Save and Continue can be problematic for surveys taken in public areas, since one user could potentially start a survey where a previous user on the same computer left off.
3. Select **Survey Language** to show your survey in various languages. Users must also have their internet browser set to the same language as the default selected here for the survey to appear correctly.
4. Select Show **Export Tags** to export the question numbers in your survey to the survey your respondents and/or other collaborators will see.
5. Survey Title: The text appears as the browser or window title.

Survey Protection

Survey Protection 	<input checked="" type="radio"/> Open Access. Allow anyone to take this survey. <input type="radio"/> By Invitation Only. Allow only those who receive invitation emails to take the survey (this will reject anonymous links). <input type="checkbox"/> Password Protection. This password must be entered to take this survey: <input type="checkbox"/> Prevent Ballot Box Stuffing. Keep people from taking this survey more than once. <input type="checkbox"/> HTTP Referrer Verification. The user must come from this url to take the survey: <input type="checkbox"/> Prevent Indexing. A tag will be added to the survey to prevent search engines from indexing it. <input checked="" type="radio"/> This survey does not expire. <input type="radio"/> This survey is valid from: <input type="text" value="2011-03-02"/> to: <input type="text" value="2011-04-02"/>
---	---

1. Select **Open Access** to allow anyone to take the survey if a survey is embedded or linked on a web page.

2. Select **By Invitation Only** to limit it to only individuals who receive invitation emails.
3. Check **Password Protection** to require a password (that you create and issue to your respondents) to take the survey. Once the selection is checked, a password entry box will display.
4. Check **Prevent Ballot Box Stuffing** to prevent users to take the survey more than once. Similar to the Save and Continue function, it can be problematic for surveys taken in public areas.
5. Select **HTTP Referrer Verification** to ensure the survey taker comes through a specific URL to take the survey.
6. Check **Prevent Indexing** to ensure that your survey is not searchable in search engines.
7. Select **This survey does not expire** to leave the survey open or **This survey is valid from to** specify a date range for when the survey will be available

Survey Termination

Survey Termination 	<input checked="" type="radio"/> Default end of survey message. <input type="radio"/> End of survey message from a library ... <input type="radio"/> Redirect to a URL full URL, ex. "http://www.qualtrics.com": <input type="checkbox"/> Send additional thank you email from a library...
--	--

Choose one of several different messages to show after a survey is complete.

Inactive Surveys

Inactive Surveys 	<input checked="" type="radio"/> Default inactive survey message. <input type="radio"/> Display inactive survey message from a library ...
--	---

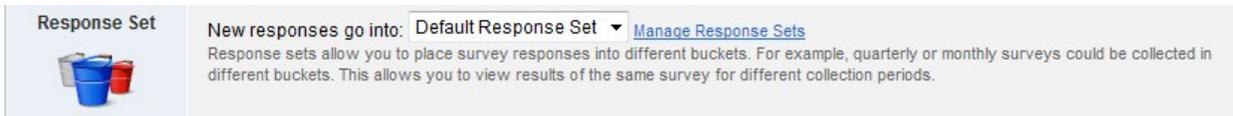

This function controls the kind of message displayed to respondents trying to take an inactive survey.

Partial Completion

Partial Completion 	How long to wait before partially completed surveys are closed and data is recorded. Please note, the recipient cannot continue taking the survey once their data is recorded: <input type="text" value="After 1 Week"/>
Response Set 	<input checked="" type="checkbox"/> Do not record partially completed surveys <input type="checkbox"/> After 4 Hours <input type="checkbox"/> After 24 Hours <input type="checkbox"/> After 48 Hours <input type="checkbox"/> After 1 Week <input type="checkbox"/> After 2 Weeks

Use the drop-down menu to choose whether or not to allow partially completed surveys, and if so, how long until partially completed surveys are recorded.

Response Set

Response Set

New responses go into: **Default Response Set** [Manage Response Sets](#)

Response sets allow you to place survey responses into different buckets. For example, quarterly or monthly surveys could be collected in different buckets. This allows you to view results of the same survey for different collection periods.

A response set is like a "bucket" where data is collected. By default, all data is collected in the **Default Response Set**. However, you may create other response sets which will split your completed data into discrete groups that can be downloaded, viewed and analyzed separately.

Response sets can differentiate your data in two ways:

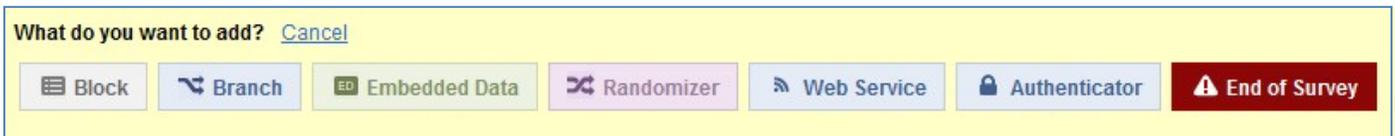

- (1) By Date: When you activate a new response set, all future incoming data will be placed in that response set rather than the old one. This will give you data in two sets (for example, a pre-October 15th and a post-October 15th response set).
- (2) By Distribution method: Using the Qualtrics Mailer, you may specify the response set into which the data for a particular mailing will be placed.

Other Editing Features

Survey Flow

This is for changing the flow of your survey when you are using multiple question blocks. This is only necessary when doing advanced surveys that require a special type of skip logic, branching, data processing, or block randomization.

The Survey Flow choices include:

What do you want to add? [Cancel](#)

[Block](#) [Branch](#) [Embedded Data](#) [Randomizer](#) [Web Service](#) [Authenticator](#) [End of Survey](#)

Block: If your survey is separated into blocks, you can customize the order of blocks.

Branch: Unique path or question sequence in a survey that respondents will be taken to depending on their answers to previous questions or other data researchers have on them

In this example, respondents who indicated that they were *dissatisfied* with something can be taken to a branch that asks them why they were dissatisfied. *Satisfied* respondents won't see that branch.

Show Block: Default Question Block (23 Questions) [Move](#) [Delete](#)

Then Branch If:

If Please indicate how satisfied you were with the following... **Very Dissatisfied** is Selected [EditCondition](#)

Or Please indicate how satisfied you were with the following... **Dissatisfied** is Selected [EditCondition](#)

[Move](#) [Options](#) [Collapse](#) [Delete](#)

Show Block: Open End Description (1 Question)

[+ Add A New Element Here](#)

Survey Flow (cont)

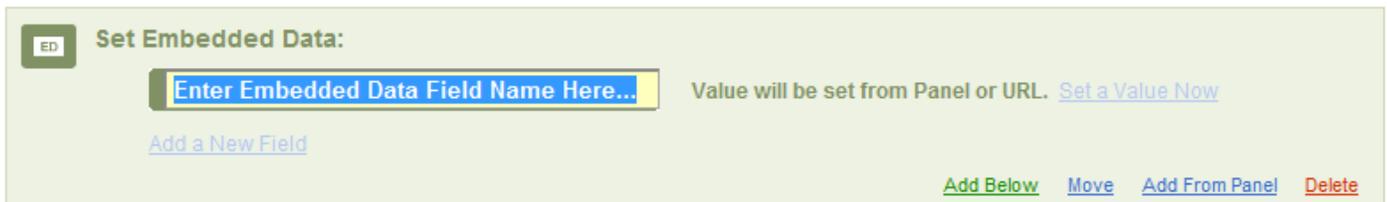

Embedded Data: Embedded data is associated with respondents who are part of a panel established in Qualtrics, e.g., name, address, age, gender, etc. This information is known before respondents complete a survey and can be uploaded and stored into panel data (see Panels). Embedded data can also be provided by the survey URL.

To get preexisting panelist data to appear along with a panelist's survey results, a command to include embedded data must be added to the Survey Flow.

This command is also used to save user data from the incoming survey URL to the survey results.

To include embedded data along with survey results:

1. Begin in survey edit mode
2. Select Survey Flow option from top tool bar
3. Click [Add Below](#) to pull up the options that can be added
4. Select Embedded Data

5. Enter the name(s) of each embedded data field you want to add
 - a. These names must match the names of the embedded data created originally in the panel
 - b. It's not necessary to add all field names, only the ones needed.
6. Embedded Data can be added to the survey flow at anytime during data collection or after all data have been collected and/or downloaded
7. After Embedded Data are added in the survey flow, the next data download will include each panelist's embedded data along with all responses to questions.

Randomizer: Enables block randomization to assign respondents to conditions or to reduce order effects. In this example, both blocks are presented to respondents in random order:

In this next example, respondents are randomly assigned to a condition:

Block Randomizer
Randomly present of the following blocks [Move](#) [Collapse](#) [Delete](#)

Show Block: Conjoint 0 (11 Questions) [Move](#) [Delete](#)

Show Block: Conjoint 1 (11 Questions) [Move](#) [Delete](#)

Show Block: Conjoint 2 (11 Questions) [Move](#) [Delete](#)

End of Survey: Allows premature end to survey if respondents meet the conditions for termination. Customized end-of-survey messages can be used for different groups as they end the survey. Select the link —Customizell to choose which specific end of survey message people on this track will see.

Show Block: Block 1 (1 Question)

End of Survey [Move](#) [Customize](#) [Delete](#)

More details: <http://www.qualtrics.com/university/survey-flow/>

Print Survey

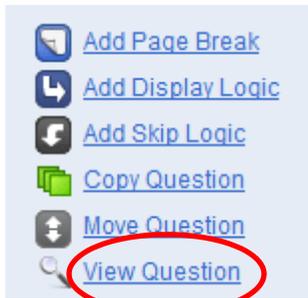

This prints out the survey which can be helpful when proofing. However, the print preview and printout will not appear exactly as it does to respondents. Block names will appear, and all blocks/questions that many respondents will never see will also appear.

Spell Check

Will spell-check the entire survey, excluding user-specific areas, such as survey, block, and question labels.

Preview Survey and/or Questions

After you have finished constructing your survey, feel free to **preview** it...

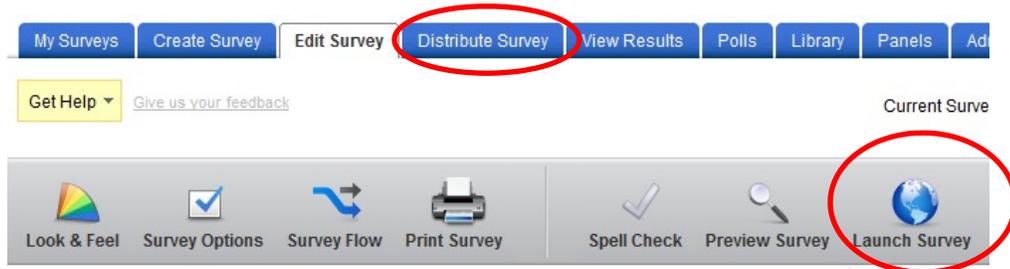

...or preview individual survey questions.

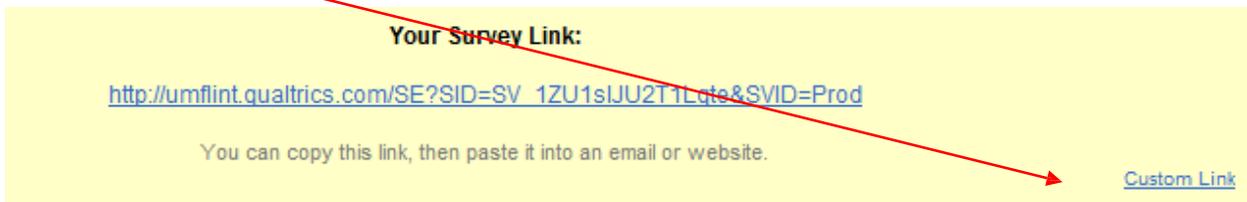

****NOTE:** When you run through the entire survey in Preview mode, your test responses will be recorded in the results. Before collecting your real survey responses, you will want to delete the test responses. You can clear out test responses by selecting the —Resultsll icon and deleting the results reports.**

Distributing a Survey

After your survey is constructed and you are ready to send it out to people, start by clicking either the **Distribute Survey** tab or the **Launch Survey** button.

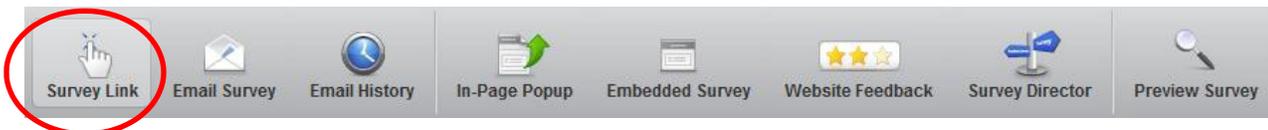

From there, you will also be required to **activate your survey to collect responses** by clicking the link on the next page. Once you do, your survey will be provided a unique link *Note: You can also customize the link:

Copy and paste the generated HTML code.

The link to the survey can always be accessed under the **Survey Link** button after the survey has been activated.

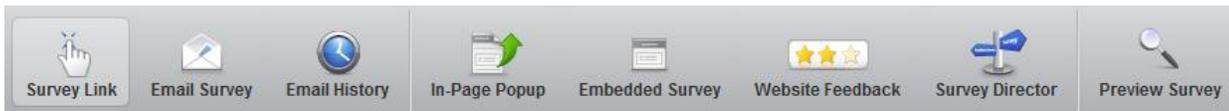

When using the Survey Mailer, individualized links can be sent to respondents. Responses can be tracked. Reminder emails can be sent to panelists who have not yet responded and an email history will document when invitation emails and reminder emails were sent.

- 1) From the Distribute Survey tab, click —Email Survey
- 2) The Survey Mailer will appear
- 3) Choose your recipient (s)
 - a. Emails can be sent to pre-specified panels or a sample of that panel (see Panels)
 - b. Emails can be sent to individuals from a panel or individual email addresses
- 4) Choose what time/day to send the email
- 5) Create your message or select a message from the library.
 - a. When you create a message, you must label the message and choose a library to save the message to.
- 6) By default, an individual link is generated for each person if surveys are sent through the survey mailer. Respondents can only access and begin the survey once. After that, they will get the message that their —survey responses have been recorded.
- 7) It is possible to allow multiple completions per individual link if you choose —Multiple Completes Per Link under —advanced options of the survey mailer

In addition to Survey Mailer, there are several other methods to distribute a survey:

- *Survey Link*: Survey links are easy to set up. And since it can be used as a link in an email or on a Web page, it can be accessed by anyone visiting your Web site resulting in a large sample. However, Qualtrics only tracks the IP address so responses are anonymous, and the potential for ballot-box stuffing is greater than Survey Mailer.
- *Email Survey*: Send Survey is useful for small panel surveys. Each participant receives a unique link to the survey and can only be used once, making the survey very secure.
- *Popup Survey*: In a Popup Survey, the link to the survey appears in a popup window. The link format is identical to Survey Link (above), so the same advantages and disadvantages apply.
- *Embedded Survey*: You can run a survey on a Web site. The link format is identical to Survey Link (above), so the same advantages and disadvantages apply.
- *Website Feedback*: If you have a website, you can use this link to get feedback from your users.
- *Survey Director*: The survey director simplifies survey distribution by using one static link to distribute several different surveys:
 1. Choose which survey a respondent will see based on quotas (e.g., after 500 responses, go to next survey)
 2. Counterbalance surveys (e.g., alternate between survey A and survey B)
 3. Choose which survey is presented based on date, day, or time (e.g., Survey A on Mondays, Survey B on Tuesdays)

More details: <http://www.qualtrics.com/university/distribute-a-survey/>

Using Panels

In Qualtrics, a panel is a database of information about respondents that has been uploaded into the system. Information from the panel can be saved to the data or be used to populate questions and email invitations.

Creating Panels

To create a pane:

1. Select the Panel tab
2. Select – Create New Panell
3. Assign and name the Panel
4. Add panel members by using
 - a. Simple Form: Copy and Paste (First Name, Last name, Email)
 - b. An Excel File
 - c. Import from a survey already taken

Using Panels to Monitor Responses

1. Responses can be monitored using the Panel Members icon under the Panels tab
2. Click email address from Panel Member list

Status	Email Address	Name	External Reference	Actions
	giantkiller56@hotmail.com	Andre1 Louis1		Edit History
	giantkiller56@gmail.com	Andre2 Louis2		Edit History
	giantkiller56@yahoo.com	Andre3 Louis3		Edit History

3. Edit Panel members' information and embedded data

Edit Panel Member - Andre1 Louis1

First Name Last Name

Email External Data Reference

Recipient ID MLRP_3KOicQs7gGyLyug Unsubscribe

Language

Add embedded data for this panel member in the box below. Enter one field and its associated value per line and ensure the field name does not contain spaces.

Embedded Data

Title,Process Manager
CompanyName,Univeristy of Michigan-Flint
StreetAddress1,530 French Hall
StreetAddress2,303 E. Kearsley
City,Flint
State,MI

Example:
State, New York
City, White Plains
Sex, Male

4. Click —Historyll next to the panel member in the list to view emails received and responses made.

Create a Sample a Panel

You can generate a random sample of individuals from your panel, or choose individuals that fit certain criteria based on embedded data or previous history/sampling information

1. Click the —Sample managementll icon from the panels tab
2. Create a sample name and choose the sample size.
3. By default, all panel members are eligible for the sample. If you require specific criteria for an individual to be included in the sample, click —add a sample conditionll. Multiple conditions can be specified.

Create Sample Panel: NewPanel ▾

Sample Name Max Sample Size [Calculator](#)

Include only panel members matching the following logic:

If ▾ Is Equal to ▾ – +

- Embedded Data
- Recipient History
- Recipient Sample Membership

View Survey Report

To view survey reports:

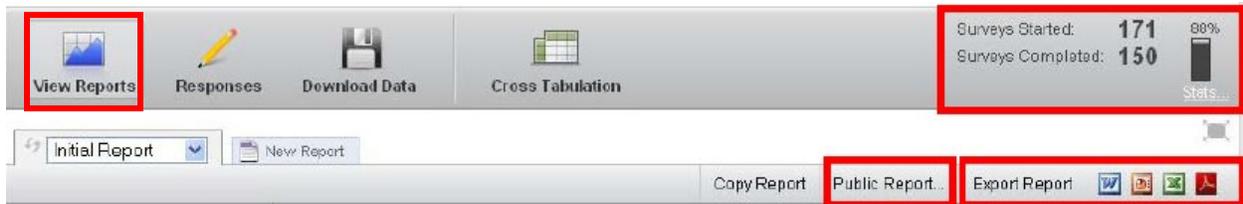

1. Select the survey and its corresponding **Results** from the **My Surveys** tab. Click **View Results...**

...or you can click the **Results** under the Task functions at the bottom of the page:

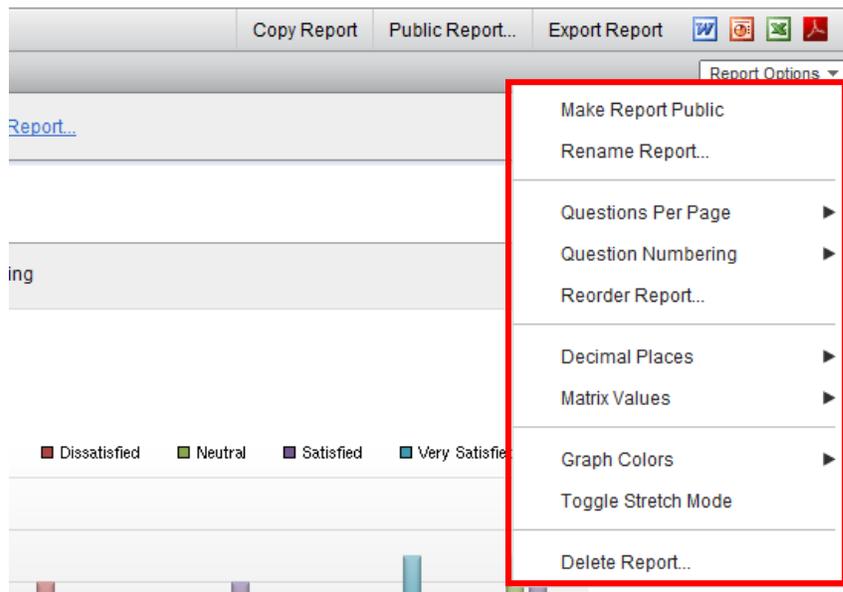

2. In the **View Reports** section, the response rate is automatically recorded. Responses are analyzed with basic descriptive statistics and text responses for each question. The report function also allows the survey creator to create charts and tables. All items of the report can be exported into Microsoft Word, PowerPoint, Excel, or Adobe PDF. Reports can also be shared with others by clicking **Public Report**.

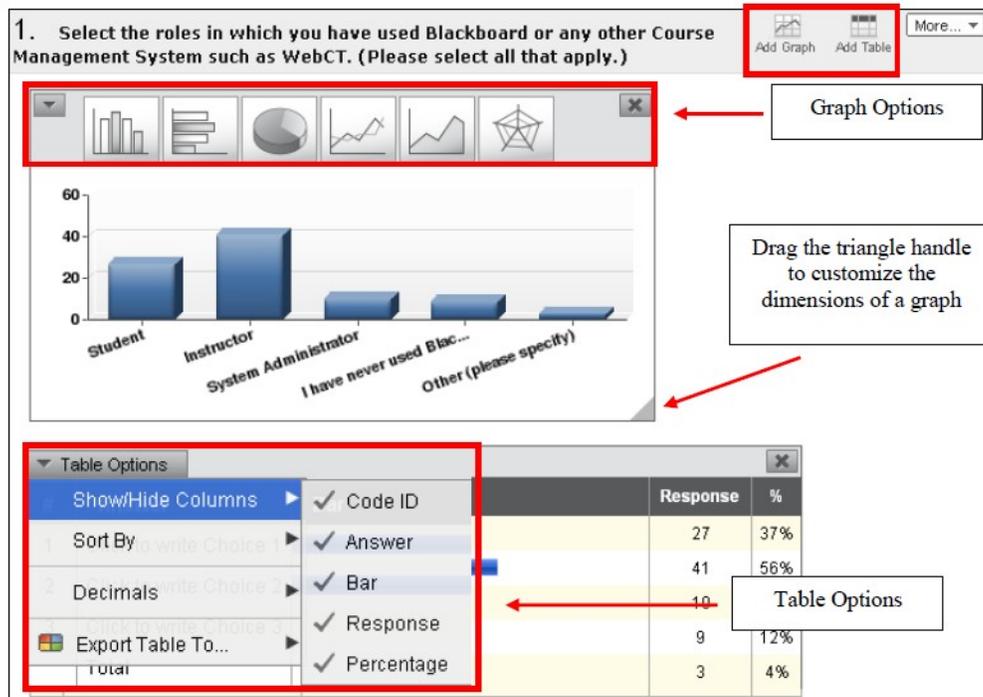

#	Answer	Response	%	Statistic	StatValue
1	Store A		20%	Mean	1.80
2	Store B		80%	Variance	0.20
	Total	5	100%	Standard Deviation	0.45
				Total Responses	5

3. Modify the display of a report with **Report Options**. For example, the number of questions per page to be displayed in a report can be customized.

4. The report itself includes a table of frequencies, a table of statistics, and graphical representations of the data. As with everything else in Qualtrics, the graphs/tables can be easily modified to match the user's preferences.

Each question is analyzed for a frequency of responses (1st table) and for statistics (2nd table). To go on to the next question, click **Next page**.

#	Question	Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied	Responses	Mean
1	Baseball	6	5	10	3	7	31	3.00
2	Football	6	8	6	6	5	31	2.87
3	Basketball	7	7	6	8	3	31	2.77
4	Tennis	6	5	6	5	9	31	3.19
5	Volleyball	2	6	9	8	6	31	3.32

Statistic	Baseball	Football	Basketball	Tennis	Volleyball
Mean	3.00	2.87	2.77	3.19	3.32
Variance	2.00	1.92	1.78	2.29	1.43
Standard Deviation	1.41	1.38	1.33	1.51	1.19
Total Responses	31	31	31	31	31

Next Page

Responses

The Responses section provides the options of searching the collected data by certain filtering criteria, such as **Response Type** and **Start/End Date**, as well as looking at **Recorded Responses** and **Responses in Progress**. It also enables the survey creator to delete responses from certain respondents (i.e. if a particular response set contains errors). The **Advanced Options** provides choices of deleting survey previews, imported survey responses, and/or all responses. In addition, Advanced Options includes an **Import Responses** option allows previous data in CSV file form to be uploaded and merged with the current Qualtrics survey data set as well as an option to **Generate Test Responses** (perfect for testing results functions without having real responses to work with).

Response ID	Respondent	Start Time	End Time	Duration	Actions
<input type="checkbox"/> R_bq3awl_3wn832hg8	134.128.35.118	03 Jun 2008 08:10 AM	03 Jun 2008 09:27 AM	1h 18m 45s	
<input type="checkbox"/> R_9rwWiseHrKk8E	134.128.135.131	03 Jun 2008 11:19 AM	03 Jun 2008 11:20 AM	0m 45s	

The **Advanced Options** provides choices of deleting survey previews, imported survey responses, and/or all responses. In addition, Advanced Options includes an **Import Responses** option allows previous data in CSV file form to be uploaded and merged with the current Qualtrics survey data set as well as an option to **Generate Test Responses** (perfect for testing results functions without having real responses to work with).

****Note:** If you are deleting an entire response set, you will be prompted to confirm the deletion before you can proceed.

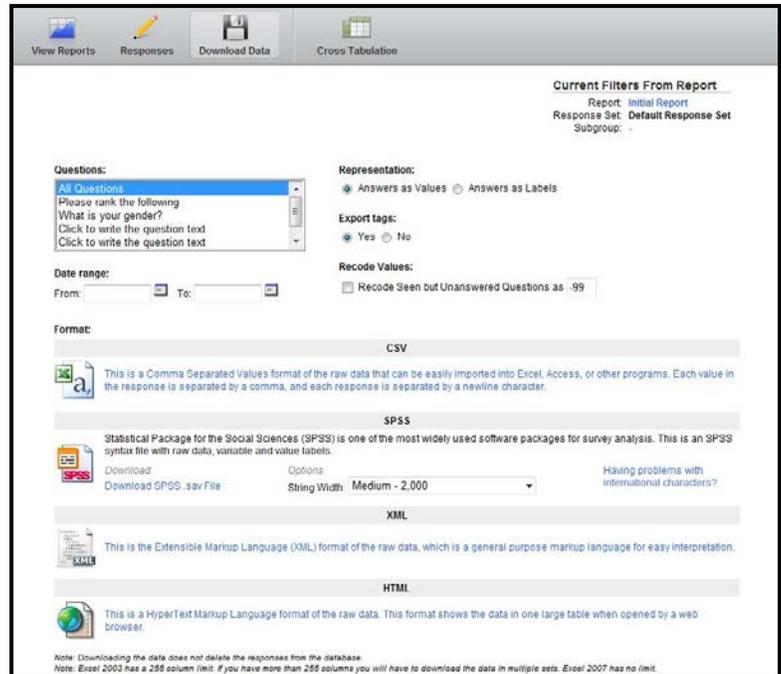

Download Data

Qualtrics allows users to download data by into other analytical programs by selected questions, time ranges, and diversified formats.

There are four types of download format:

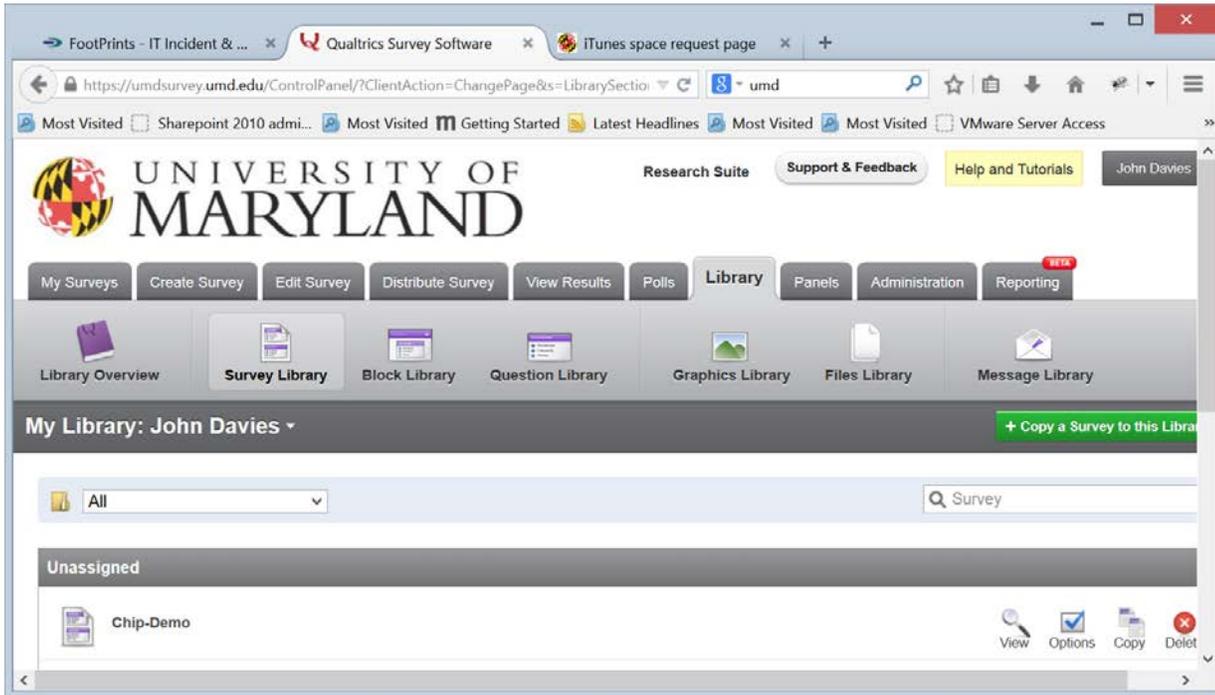

1. CSV – Can be imported into Excel or Access.
2. SPSS – Can be imported into the Statistical Package for the Social Sciences
3. XML – Extensible Markup Language format of the raw data.
4. HTML – Basic structural markup language for use on Web sites.

****Note:** To select multiple questions from which you can download data, a sequential selection can be done by holding the Shift key on the keyboard while clicking the question. Otherwise, the Ctrl key can be used to do non-sequential selections. On a Mac computer, the sequential selection is the same as on a Windows computer; while non-sequential selection can be done by the combination of holding the Command key (⌘) and clicking the questions.

Qualtrics Libraries

Qualtrics provides several libraries for survey creators to manage the surveys, questions, graphics and messages. The items in the libraries can be pre-designed by Qualtrics, created by individual users, or created by a group of users.

Survey Library:

The Survey Library provides a repository to store the surveys that can be repeatedly used. Using the Current Library dropdown menu, you can toggle among the survey libraries pre-designed by Qualtrics or created by individual users or groups. Surveys in the Survey Library can also be organized by folders. The surveys in the library can be viewed, modified with Options, copied, and deleted.

Question Library:

The Question Library manages questions that can repeatedly used. The layout of the Question Library is the same as the Survey Library. Using the Current Library drop-down menu, you can toggle among the survey libraries pre-designed by Qualtrics or created by individual users or groups. Questions in the Question Library can also be organized by folders. The questions in the library can be viewed, modified with Options, copied, and deleted.

Graphics Library:

The Graphics Library helps to organize images uploaded by Qualtrics, an individual Qualtrics user, and groups of Qualtrics users. The Question Library also enables easy access to insert images in the header, footer, question description and response item in an online questionnaire when creating a Qualtrics survey. Similar to the other libraries, graphics in the Graphics Library can also be organized by folders. The layout of the Graphics Library is the same as both the Survey Library and Question Library with one exception: you must click on a particular image to get the Question Library options, which include editing, copying, deleting, and viewing.

Message Library:

The Message Library enables the user to create an End of Survey Messages, reminders, inactive survey messages, etc.

Qualtrics Support

There are many resources available for Qualtrics users. For more information about Qualtrics and its functions, comprehensive wikis, webinars, and video tutorials can be found in the GET HELP section; located on the **My Surveys** section of Qualtrics (under the Create Survey Icon).

Also, feel free to visit the other websites for additional resources:
