

GSM Home Alarm System

GSM Home Alarm System

Security system **EPIR** will inform you immediately with SMS message and phone call to your mobile when "unauthorized guest" enters your premises.

The system will automatically switch to back-up battery in case main power supply gets disconnected. You will always know what is happening in your garage, cottage or at home.

In case of AC mains failure, **EPIR** system will notify you with SMS message.

Starting security system EPIR operation is as simple as mobile phone:

Insert SIM card

Connect to mains power socket

The system is ready to work

Enabled **object security function** will guard your property 24 hours a day and will send SMS message and make a phone call to your mobile upon intrusion.

Voice channel allows user to listen what is happening in secured property with mobile phone.

Main power supply disruption control function will generate and send SMS message in case of mains 230V 50Hz power failure. This function comes particularly handy when using wood burning boilers.
