8.Ordering Information

All order information of ESM-3710-N Temperature Controller are given on the table at above. User may form appropriate device configuration from information and codes that at the table at above. User may form appropriate device configuration from information and codes that at the table and convert it to the ordering codes.Firstly, supply voltage then other specifications must be determined. Please fill the

order code blanks according to your needs.

Please contact us, if your needs are out of the standards

9.Optional Accessorie

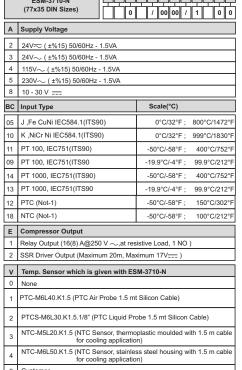

RS-485 Communication Interface

— ⇒Vdc ⇒Vdc or Vac can be applied

Download) by using the parameters.

Thank you very much for your preference to Thank you very much for your preference to use Emko Elektronik products, please visit ou Your Technology Partner web page to download detailed user manual.

- J Type thermocouple Input or.
- K Type thermocouple Input or,
- 2-Wire PT-100 Input or, 2-Wire PT-1000 Input (Must be determined in order.)
- Adjustable temperature offset ON/OFF temperature control - Selectable heating or cooling function
- Selection of operation with hysteresis
- Adjustable temperature offset
- Set value low limit and set value high limit boundaries
 Operation selection of compressor operates continuously,
- stops or operates periodically in case of sensor defect Compressor protection delays
- Adjustable internal buzzer according to sensor defect status.
- Password protection for programming section
 Installing parameters using Prokey
- Remote access, data collecting and controlling with Modbus RTU
- Having CE mark according to European Norms

Instruction Manual. ENG ESM-3710-N 01 V04 07/14

A visual inspection of this product for possible damage occurred during shipment is recommended before installation. It is your responsibility to ensure that qualified mechanical and electrical technicians install this product.

If there is danger of serious accident resulting from a failure or defect in this unit, power off the

The unit is normally supplied without a power supply switch or a fuse. Use power switch and fuse

Be sure to use the rated power supply voltage to protect the unit against damage and to prevent

Keep the power off until all of the wiring is completed so that electric shock and trouble with the unit can be prevented. Never attempt to disassemble, modify or repair this unit. Tampering with the unit may results in malfunction, electric shock or fire.

Do not use the unit in combustible or explosive gaseous atmospheres.

During putting equipment in hole on the metal panel while mechanical installation some metal burrs can cause injury on hands, you must be careful.

Montage of the product on a system must be done with it's fixing clamps. Do not do the montage of the device with inappropriate fixing clamp. Be sure that device will not fall while doing the montage

It is your responsibility if this equipment is used in a manner not specified in this instruction

1.4 Warranty

EMKO Elektronik warrants that the equipment delivered is free from defects in material and workmanship. This warranty is provided for a period of two years. The warranty period starts from the delivery date. This warranty is in force if duty and responsibilities which are determined in warranty document and instruction manual performs by the customer completely.

Repairs should only be performed by trained and specialized personnel. Cut power to the device before accessing internal parts. Do not clean the case with hydrocarbon-based solvents (Petrol. Trichlorethylene etc.). Use of

these solvents can reduce the mechanical reliability of the device. Use a cloth dampened in ethyl alcohol or water to clean the external plastic case.

Home applications (The unit is only for industrial applications)

1.2 General Specifications

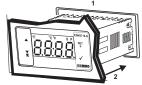

2.3 Panel Mounting

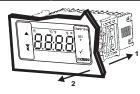

1-Before mounting the device in your panel, make sure that the cut-out is of the right size.

2-Insert the device through the cut-out. If the

3- Insert the mounting clamps to the fixing sockets that located left and right sides of device and make the unit completely immobile within the panel

2.4 Removing from the Panel

1-Pull mounting clamps from left and right fixing

2-Pull the unit through the front side of the panel

Before starting to remove the unit from panel power off the unit and the related

3. Using Prokey

TO USE PROKEY, VALUE OF THE PrC PARAMETER MUST BE '0' IF PrC=1 AND ▼BUTTON IS PRESSED Fr MESSAGE WILL BE SHOWN. 10s. LATER DEVICE TURNS BACK TO THE MAIN OPERATION SCREEN OR YOU CAN PRESS SET BUTTON TO TURN BACK TO MAIN OPERATION SCREEN.

DOWNLOADING FROM DEVICE TO PROKEY

- 1.The device is programmed by using the parameters.

 2.Energize the device then put in PROKEY and press ▼ button. □ PL Message is shown on the display. When the loading has finished, □ Message is shown.

 3.Press any button to turn back to main operation screen.
- 4 Remove the PROKEY

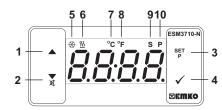

NOTE: Err message is shown when an error occurs while programming. If you want to reload, put in PROKEY and press ▼ button. If you want to quit, remove PROKEY and press ▼ button. The

DOWNLOADING FROM PROKEY TO DEVICE

- 1.Switch off the device.
 2.Put in PROKEY then energize the device.
- 3. When the device is energized, the parameter values in PROKEY, start downloading to the device automatically. At first, and message is shown on the display, when loading has finished, First shown. message is shown.
- 4.After 10 seconds device starts to operate with new parameter values.

NOTE: Err message is shown when an error occurs while programming. If you want to reload, switch off the device and put in PROKEY then energize the device. If you want to quit remove PROKEY and press ▼ button. The device will turn back to main operation screen.

5.Front Panel Definition and Accessing to the Menus

BUTTON DEFINITIONS

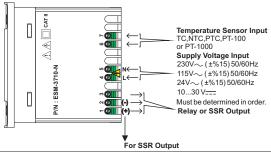

- * It is used to increase the value in the Set screen and Programming mode
- 2. Decrement, Silencing Buzzer and Downloading to Prokey Button:
 *** It is used to decrease the value in the Set screen and Programming mode.
- ** It is used to silence the buzzer.
- ** If Prc =0, it is used to download from device to prokey.
- 3. Set Button:
- ** In the main operation screen; if this button pressed, set value will be displayed. Value can be changed using increment and decrement buttons. When Enter button pressed, value is saved and returns back to main operating screen.
- * To access the programming screen; in the main operation screen, press this button for 5 4. Enter Button:
- ** It is used to saving value in the Set screen and programming screen.

LED DEFINITIONS

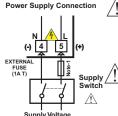

5. Cooling led:

- * This led indicates that cooling control is selected and process output relay is active. If any of compressor protection time active, this led blinks. 6.Heating led :
- ** This led indicates that heating control is selected and process output relay is active. 7.Celcius led:
- * Indicates that device is in °C mode
- 8.Fahrenheit led:
- * Indicates that device is in °F mode.
- Indicates that device is in Set value changing mode. 10.Program led:
- Blinks in programming mode

4. Electrical Wiring Diagram

4.1 Supply Voltage Input Connection of the Device

nstalling the unit, supply voltage range must be controlled and appropriate supply voltage must be applied to the unit. There is no power supply switch on the device. So a power supply switch must be added to the supply voltage input. Power switch must be two poled for seperating phase and

neutral, On/Off condition of power supply switch is very mportant in electrical connec External fuse that on \sim power supply inputs must be on

External fuse that on ___power supply inputs must be on (+)

Make sure that the power supply voltage is the same

Switch on the power supply only after that all the electrical connections have been completed.

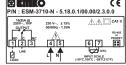

Supply voltage range must be determined in order. While

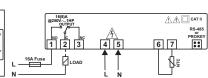

Must be determined in order.

Note-1: External fuse is recommended

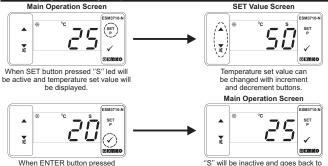

230V~ (±%15) 50/60Hz

6. Changing and Saving Temperature Set Value

Temperature set value parameter (Default=50) MODBUS ADDRESS:40001 Temperature set value, can be programmed between minimum temperature set value Sulland maximum temperature set value Sulland.

6.1 Programming Mode Parameter List

temperature set value can be saved.

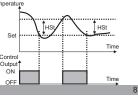

Note: If sensor input type is selected J, K, PT-100 or PT-1000 (BC =05,10,11 or 14)

Hysteresis Parameter for Compressor Output (Default = 1) MODBUS ADDRESS:40004

MODBUS ADDRESS:40004 from 16 20°C for NTC (-50°C, 100°C) or PTC (-50°C, 150°C) or JType TC (0°C, 800°C) or KType TC (0°C, 100°C or PT-100 Type (-50°C,400°C) or PT-1000 Type (-50°C,400°C) or PT-1000 Type (-20°C,100°C), from 1 to 36°F for NTC (-58°F, 212°F) or PTC (-58°F, 302°F) or JType TC (32°F,1472°F) or KType TC (32°F,1830°F) or PT-100 Type (-58°F,752°F)

or PT-100 Type (-4°F,212°F) from 0.1 to 10.0°C for NTC(-50.0°C,150.0°C) or PTC (-50.0°C,150.0°C) or PT-100 (-19.9°C.99.9°C from 0.1 to 18.0°F for NTC (-58.0°F,212.0°F) or PTC (-58.0°F,302.0°F) or

PT-100 (-4.0°F,212.0°F), In ON/OFF control algorithm, temperature T value is tried to keep equal to set value by opening or closing the last control element. ON/OFF controlled system, temperature value oscillates continuously. Temperature value's oscillation period or amplitude around set value changes according to controlled system. For reducing oscillation period of emperature value, a threshold zone is formed below or around set value and this zone is

Minimum Temperature Set Value Parameter (Default = Minimum Value of Device Scale) MODBUS ADDRESS:40005 Temperature set value can not be lower than this value This parameter value can be adjusted from minimum value of device scale to maximum

temperature set value parameter 5 ப H

Maximum Temperature Set Value Parameter (Default = Maximum Value of Device Scale) MODBUS ADDRESS: 40006
Temperature set value can not be bigger than this value.

This parameter value can be adjusted from minimum temperature set value parameter to maximum value of the device scale

Sensor Offset Parameter (Default = 0) MODBUS ADDRESS:40007 from -20 to 20 °C for NTC(-50°C, 100°C) or PTC(-50°C, 150°C) or J Type TC (0°C,800°C) or J Type TC (0°C,1000°C) or PT-100(-50°C, 400°C) or PT-1000 (-50°C, 150°C) or PT-100 (-20°C, 100°C).

PT-100 (-20°C, 100°C), from -36 to 36°F for NTC(-58°F, 212°F) or PTC(-58°F, 302°F) or JType TC (32°F, 1472°F) or Or KType TC (32°F, 1830°F) or PT-100(-58°F, 752°F) or PT-1000(-58°F, 752°F) or PT-1000(-58°F, 752°F) or PT-100 (10.0°C) or PTC(-50.0°C, 150.0°C) or PTC(-50.0°C, 212.0°F) or PTC(-58.0°F, 302.0°F) or PTC(-58.0°F, 212.0°F) or PTC(-58.0°

Operating Type Parameter (Default = 0) MODBUS ADDRESS:40008 If parameter value is '0' device skips to buf parameter

Heating Cooling

Compressor Start Delay at Power On Parameter (Default = 0)

MODBUS ADDRESS:40009

When power is first applied to the device, compressor is on when this time delay is expired. It can be adjusted from 0 to 20 minutes.

Compressor Stop-Start Delay Parameter (Default = 0) MODBUS ADRES:40010 When compressor is inactive, this time delay must be expired for activation of the compressor. It can be adjusted from 0 to 20 minutes.

Compressor Start-Start Delay Parameter (Default = 0) MODBUS ADRES:40011 This time delay must be expired between two activation of the compressor. It can be adjusted from 0 to 20 minutes.

Sensor Defect Parameter (Default = 0) MODBUS ADRES:40012

Compressor is OFF in case of sensor defect. Compressor is ON in case of sensor defect. Compressor operates periodically according to $\boxed{\mathbb{P}_{o} \cap}$ and $\boxed{\mathbb{P}_{o} \cap}$ Time periods in case of sensor defect.

Compressor is active during this time period in case of probe defect (Default = 0) If probe defect parameter PdF is 2, then this parameter is observed. It can be adjusted from 0 to 99 minutes. MODBUS ADRES:40013

Compressor is inactive during this time period in case of probe defect (Default = 0)MODBUS ADRES:40014 If probe defect parameter PaF is 2, then this parameter is observed. It can be adjusted from 0 to 99 minutes.

Buzzer Function Selection Parameter (Default = 0) MODBUS ADDRESS:40015

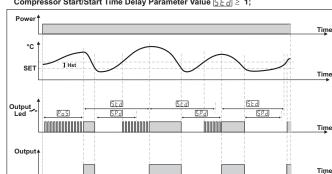

Buzzer is active during sensor failures

6.3 Operation Graphics of ESM-3710-N Temperature Controller

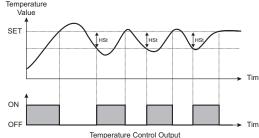

1-If Operating Type Parameter Value H[5] = 1 (Cooling) Switch On Delay After Power On Parameter Value Po5 > 1,

Compressor Stop/Start Time Delay Parameter Value Po5 > 1 and

Compressor Start/Start Time Delay Parameter Value Fo5 > 1;

2-If Operating Type Parameter Value H[5] = 0 (Heating),

In ON/OFF control algorithm, temperature value is tried to keep equa to set value by opening or closing the last control element. ON/OFF controlled system, temperature value oscillates continuously. Temperature value's oscillation period or amplitude around set value changes according to controlled system. For reducing oscillation period of temperature value, a threshold zone is formed below or around set value and this zone is named hysteresis. Action of control output is described with figures above.

6.4 Failure Messages in ESM-3710-N Temperature Controller

55 C Screen Blinking

Sensor failure. Sensor connection is wrong or there is no sensor connection. If buzzer function selection parameter buF is 1, internal buzzer starts to operate.

6.2 Modbus Adresses of Device Status Parameters (Read Input Register) MODBUS ADDRESS:30002 Led Status: 0.bit °C Led, 6.bit Compressor Led, 13.bit Program Led, 14.bit Set Led MODBUS ADDRESS:30003 1.bit Buzzer Status 2.bit Sensor Lost Status Output Status MODBUS ADDRESS:30004 Device Type and Device Version

Buzzer is active during this time (Default = [---]) MODBUS ADDRESS:40016
If buzzer function selection parameter value [_____]=0, this parameter can not be observed. Buzzer stays active during this time. It can be adjusted from 1 to 99 minutes
When this parameter is 1 if decrement button is present [_____] is phenomed in this

Programming Section Accessing Password (Default = 0) MODBUS ADDRESS:40019
It is used for accessing to the programming section. It can be adjusted from 0.1c 0.000. If it is
