Rosewill®

Limited Warranty Terms & Conditions

Rosewill Limited warrants this product against defects in workmanship and material for a period of one (1) year from its original purchase date. You must present your receipt as proof of date of purchase for warranty validation. Any unit which proves defective during the stated period will be repaired without charge for parts or labor or be replaced at the sole discretion of Rosewill. The end user is responsible for all freight charges incurred to send the product to Rosewill's repair centers. The end user is responsible for all shipping costs incurred when shipping outside the country of origin.

This warranty does not cover any incidental, accidental, or consequential damages arising from the use of or the inability to use this product. Any costs associated with the fitting or removal of this product by a tradesman or other person or any other costs associated with its use are the responsibility of the end user. This warranty applies only to the original purchaser of the product and is not transferable to any third party. Unauthorized end user or third party modifications to any component or evidence of misuse or abuse of the device will render all warranties void.

By law, some countries do not allow limitations on certain exclusions in this warranty. Where applicable by local laws, regulations and legal rights will take precedence.

FCC Verification

NOTE: This equipment has been tested and found to comply with the limits for Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and radiates radio frequency energy and, if not installed and used according to instructions, may cause harmful interference to radio or television reception, which can be determined by turning that equipment off and on. The user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the distance between the equipment and the receiver
- Connect the equipment into an outlet on a circuit different than the receiver is connected
- Consult the dealer or an experienced radio / TV technician for help

These devices comply with Part 15 of the FCC Rules. Operation is subject to the following two (2) conditions:

- These devices might not cause harmful interference, and
- These devices must accept any interference received, including interference that might cause undesired operation.

Important Note

All jurisdictions have specific laws and regulations regarding the use of Cameras. Before using any Camera for any purpose, it is the buyer's responsibility to be aware of all applicable laws and regulations that prohibit or limit the use of Cameras and to comply with those laws and regulations.

WARNING

Modifications not approved by the party responsible for compliance could void user's authority to operate the equipment.

IMPORTANT SAFETY INSTRUCTIONS

Make sure the Camera is correctly secured if affixed to a permanent place.
Do not operate if wires and electrical components are exposed.

Congratulations

Congratulations on your purchase of our SHIELDeye Pan & Tilt IP Camera. With this IP (Internet Protocol) Camera, you can monitor your home day and night, watch your children, and keep an eye on pets at every moment. You can also interact with your family anytime by the remote online smartphone speaker and view feature. With the easy set up process, you can install and program your IP Camera by yourself simply and quickly. It is powerful yet suitable for homes, businesses, offices, and any areas that need discreet monitoring.

Note: To better this Camera, we will keep improving the software and user manuals. Therefore, if you find this user manual does not match the IP Camera, please download the latest files at www.rosewill.com.

IP (Internet Protocol) Camera Information

Camera Details

1. **Infrared LEDs:** Illuminates targeted areas when in almost total darkness.
2. **Microphone:** Acts as “ears” to hear sounds and interact with other, nearby Cameras.
3. **Illumination Sensor:** Detects light level and powers the IR (infra-red) LEDs for night vision.
4. **Speaker:** Acts as your “mouthpiece” With this Camera, you can talk via your mobile device and your voice will be heard on the speakers on the Camera.
5. **Audio Out:** Hook up to intercom or speakers.
6. **Network (LAN) Port:** Connect an Ethernet cable to a Wi-Fi router.
7. **Antenna Connector:** Co-ax cable port for an external Wi-Fi antenna.
8. **Micro SD:** Easy-access card slot. Up to 32 GB.
9. **Reset Button:** 5-Second Press+Hold will reset all settings back to the factory defaults.
10. **Network LED:** Blinks when the camera and network are connected.
11. **DC 5V:** Power source port.

Package Contents

What's in the Box

1 pc IP Shield Security Camera	1 pc Software CD	1 pc 5V Power Cable	1 pc Mounting Bracket
	1 pc Ethernet Network Cable	1 pc User Manual	1 pc Antenna

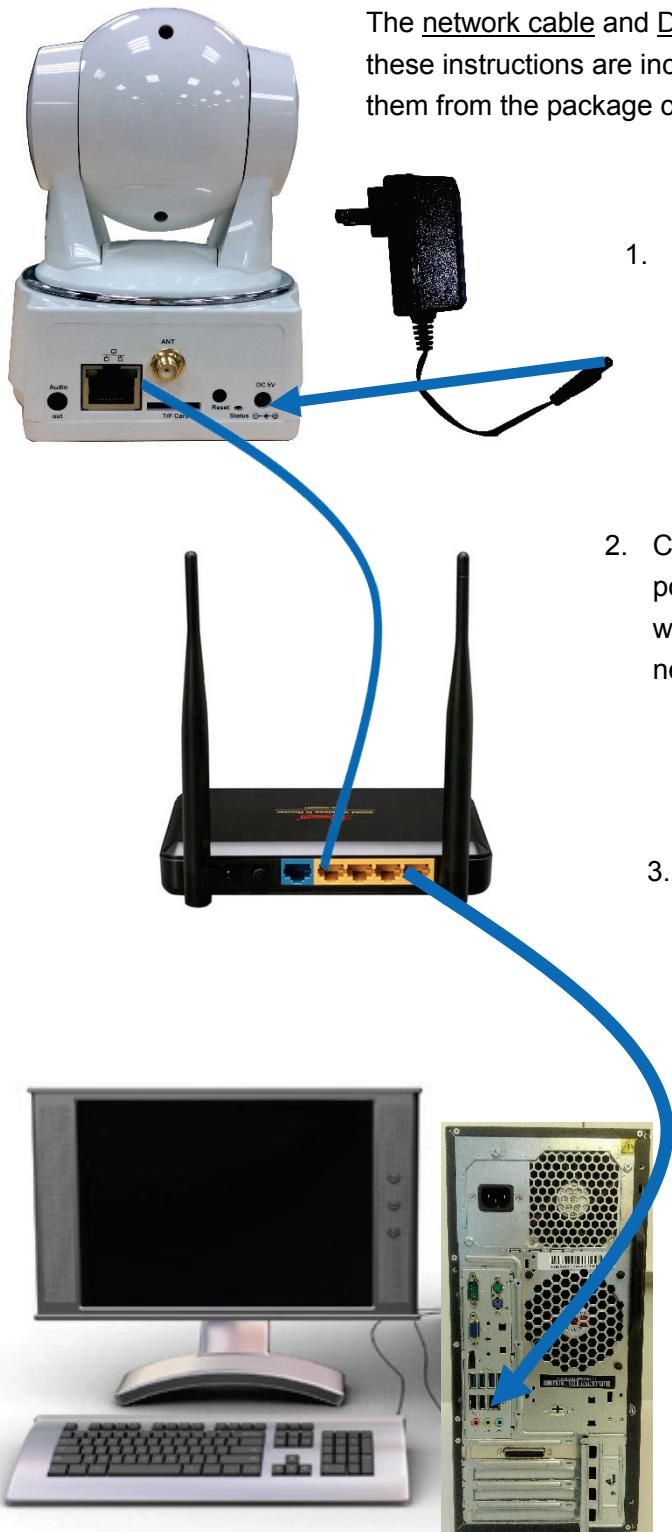

If any of the items are missing, please contact your vendor.

Before You Start

1. For **Quick Installation** via your smartphone,
You can follow the instruction on the colorbox to finish the Quick Installation with your smartphone.
2. In order to install your Camera successfully on your desktop, please make sure you have the following:
 - An Internet connection
 - A wireless router connected to your broadband modem
 - A computer operating Windows® XP/Vista/7/8 with Internet Explorer® 6 or higher and ActiveX® controls enabled

Setting Up Your Camera

Connecting to a LAN (using a Network Cable)

The network cable and DC 5V power cable that are needed for these instructions are included with your Camera. Please get them from the package contents and have them ready.

1. Connect the DC 5V power cable to the Camera's DC 5V port and plug the cable to the electrical outlet.
2. Connect the Camera's Network LAN port to any available LAN port on your wireless router. Use the supplied network Ethernet cable.
3. Connect the computer to any LAN port on the wireless router.

You can either use this computer to configure the Camera or to access the Camera, or to do both

Installing SHIELDeye Software

SHIELDeye is an easy way for users to set up and control the Camera that is connected on your home network via your computer. SHIELDeye allows you to connect multiple IP Cameras and simultaneously record and playback immediately recorded videos while your current recordings continue *uninterrupted*.

- A mobile app version of this software is also available for Android and iPhone smartphones. The SHIELDeye app can be downloaded for free from the Apple App Store or see “Connecting by iPhone or Android Smartphone” on page 16 for more details.

Windows Users

1. Insert the CD into your PC and follow the on-screen prompts to install the software. At this time, we suggest you open the user manual for the following instructions.
2. If prompts didn't show up, access it from **My Computer > CD/DVD drive> amplayer** file and **run** the software directly.
After installation, the SHIELDeye icon will appear on your desktop.
3. Click the icon to start the PC monitoring software to view and record from your Camera and other functions.

Note: Startup via smartphone may not provide all the functions of the IP Camera, but it's easier and provides enough functions that users can view via their mobile devices.

Default Username and Password

Username: admin

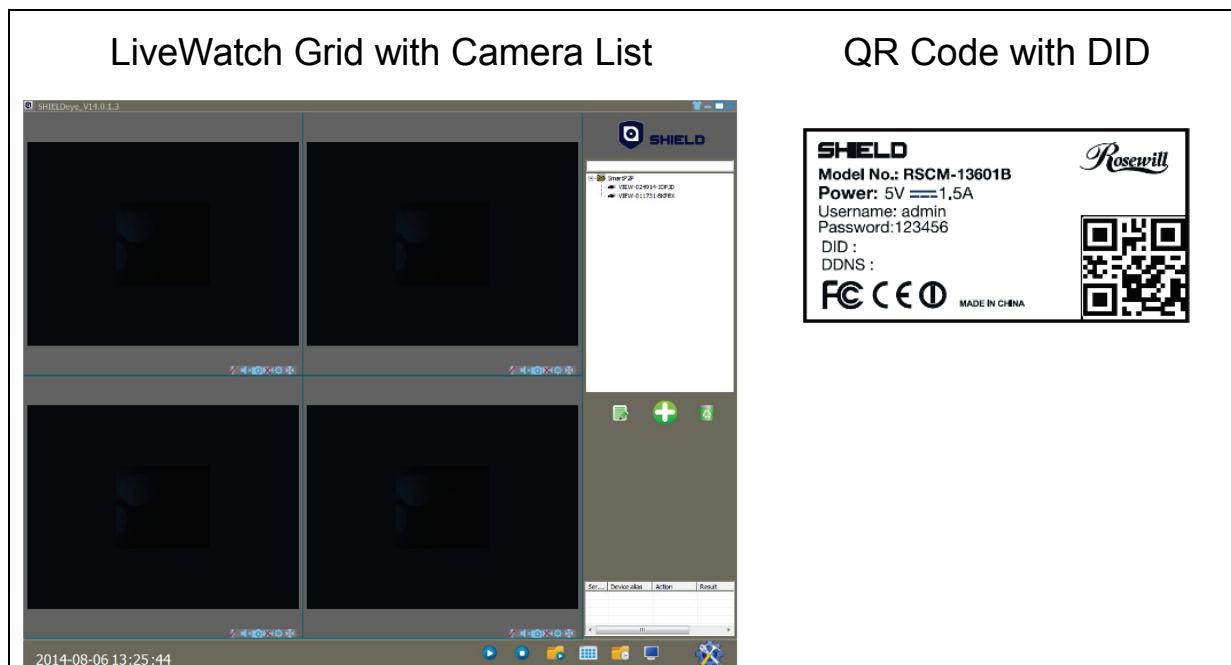

Password: 123456

Understanding the “LiveWatch” Interface

This software interface acts as your virtual eyes and allows you to control and adjust the Camera settings on site or from other time zones.

Launch SHIELDeye, and the **LiveWatch software UI** (User Interface) will open. See below. This Camera software allows you to connect up to 16 Cameras, record videos and take snapshots, configure Wi-Fi settings, and has 2-way audio remote conversation. Hover your mouse over each feature for a detailed explanation.

Using Add Device Mode

NOTE: Before adding a Camera, 1. Locate the QR sticker on the bottom of the Camera, 2.

Write down the **DID code**. 3. Click the button . It displays the **Add Device Mode** window.

There are two ways to add a Camera (referred to as a “device”).

Search to Add

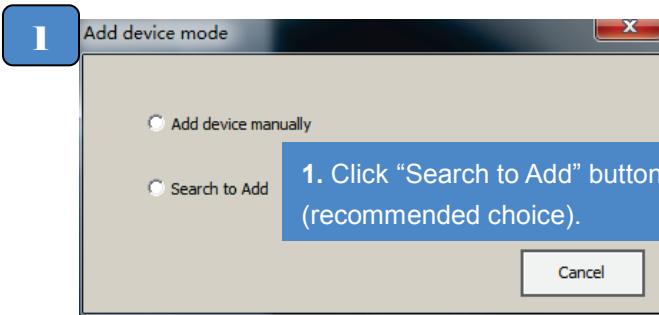

1. Click **Search to Add** button.
2. In Device Type, Choose **Smart P2P** and Click **Search**.
The name of the corresponding Camera will appear.
3. Enter the DID: (number that follows DID: xxxx) and **Enter** default password and
4. Click **Save**. The Camera will be linked by entering the DID. The DID will then be saved and stored in **Camera List**.

Manually Add

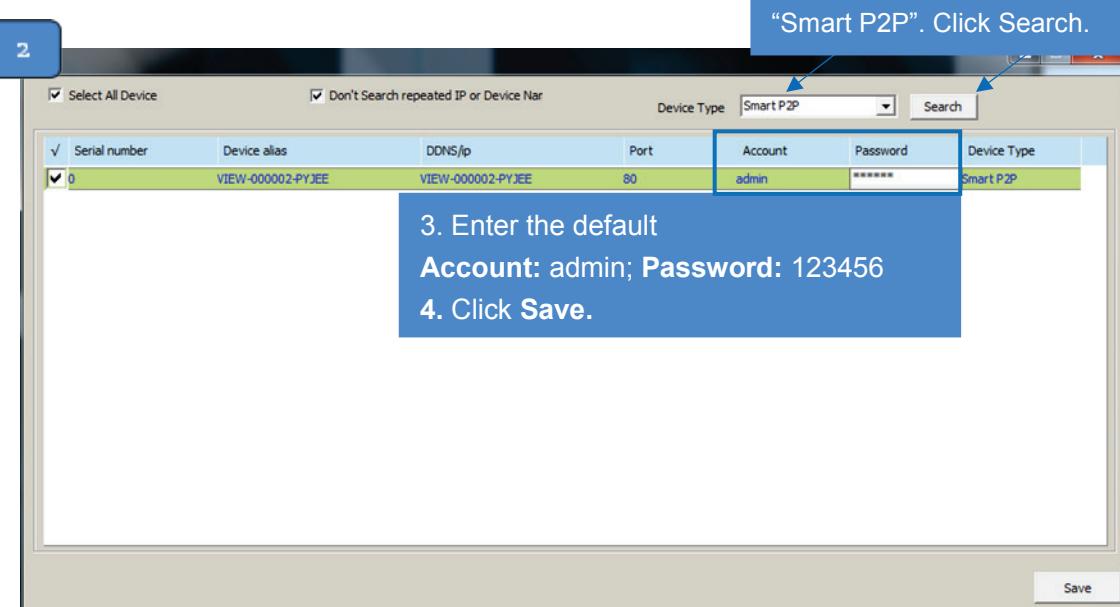

1. Select **Add device manually** to edit device information.
2. Find your Camera.
3. Edit device information. NOTE: Textboxes with an asterisk (*) must be filled out. (We suggest logically naming your Camera(s) for easy identification in the **Camera list**.)
When the first Camera is added, it will occupy the first row. When another Camera is added, it will occupy the second row in the list. As Cameras are added, they will appear in their corresponding order on the camera list.
4. Double click the Camera name to start watching live video on the corresponding channel.

Setting Up Video

This section details how to set up your Camera(s).

Basic Camera Controls

You can control the image, audio, PTZ (pan, tilt, zoom) and other options while you are watching the video via the functions below.

	Speaking
	Listening
	Snapshot
	Record and status display record manually; scheduled record
	Image Setting You can control resolution and brightness/contrast  <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;"> Note: If the video doesn't run smoothly due to bandwidth restrictions, you can lower the resolution for better streaming. </div>
	PTZ Control  Cruise vertically, horizontally and center.

Local Menu Setup

The screenshot shows the SHIELDeye SmartCam software interface with the following components:

- Top Bar:** Displays the date and time (2014-04-09 10:56:23) and includes a toolbar with various icons.
- Device List:** A table showing device configurations:

	Play All Devices in the List		Stop All Devices in the List
	Eyeplayer is video playback		Multiple Image Window
	Device Log records video history		Full Screen Mode
- System Setting:** A section containing the "System Setup" dialog box.
- Trigger Alarm:** A blue callout box with the text: "Three (3) setting options that activate only during motion detection." It points to the "Trigger Alarm" section in the System Setup dialog.
- File Browse:** A blue callout box with the text: "Select where to save videos." It points to the "Save Path for Snapshot and Record file" field in the System Setup dialog.
- Play Automatically After Reboot:** A blue callout box with the text: "Auto-connect and play the Cameras in device list after the software is rebooted." It points to the "Play automatically after reboot" checkbox in the System Setup dialog.
- Record Plan:** A blue callout box with the text: "Create a customized recording schedule. See ‘Recording Strategy.’" It points to the "Record Strategy" dialog box.
- Record Strategy Dialog:** A detailed view of the "Record Strategy" dialog box, showing:
 - A table of existing strategies.
 - A main configuration area with fields for "Strategy name" (Play2014-04-09102122), "File Duration" (60 Minute), and "Setup Time" (grid-based schedule).
 - An "Action" section with two radio button options:
 - Sustain Recording, Stop record when the disk is only 1GB space!
 - not enough 1GB space, cover earliest file to continue record!
 - A "Time Period" section with a grid for selecting specific days and hours.
 - Buttons for "Delete" and "Save".

Camera WiFi Setup

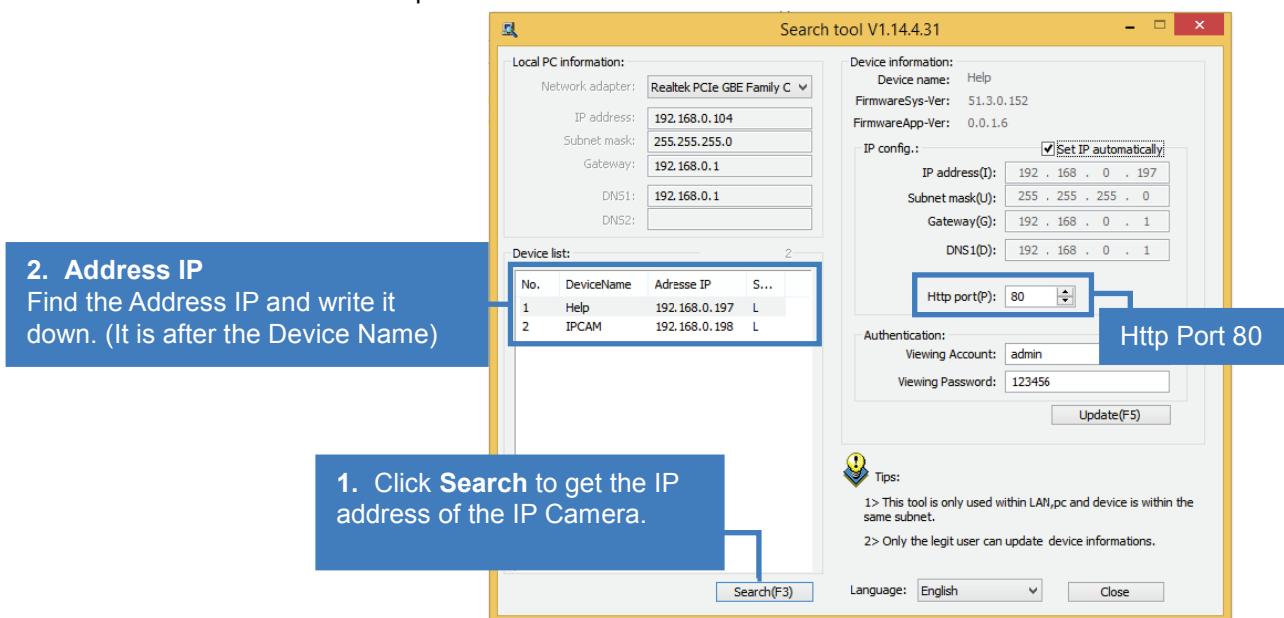

So, you have successfully installed the Camera and have been able to view what you want over the network, but now you want to avoid the cable running down the hallway. You could set up your IP Camera wirelessly! Before start your wireless setup, please check that your wireless router works, and remember to connect your router, desktop and the IP Camera according to page 6. There are two ways to create your wireless connection.

Note: Wireless viewing only works if your wireless network locates the IP Camera. If the wireless signal is weak, the video may be disruptive. To ensure a strong signal and reception, we suggest you connect using the Ethernet network cable.

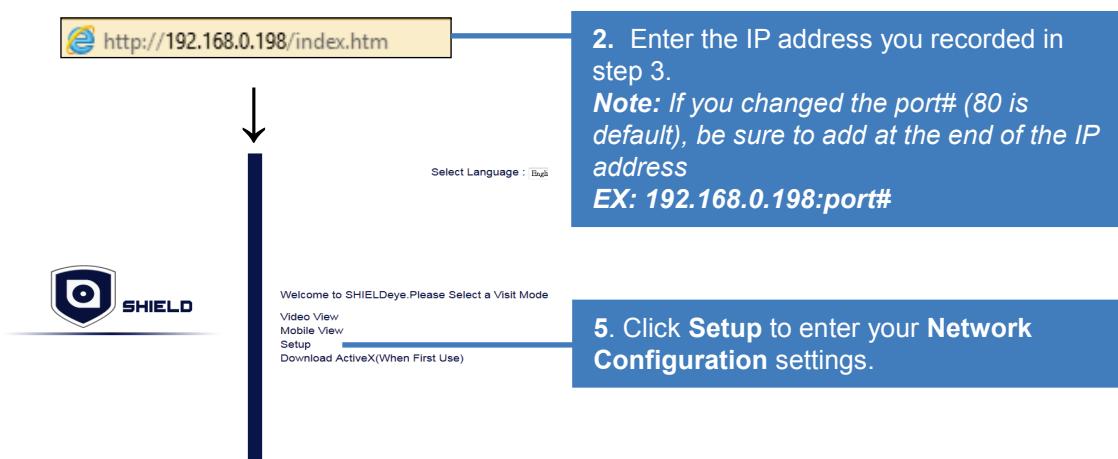

Connecting Through PC & Web Interface

To set up this wireless connection, you need to enter the **Web Interface**. To get into the Web Interface, you need to know the **IP address of your IP Camera**. Follow these steps to get the IP address.

1. Find **SearchTool.exe** in the Installation CD.
2. Double click **SearchTool.exe** and you will see the image below.
3. Click **Search** and you can see the IP address of your device in the device list, and write down the IP address for further setup.

4. Open your Internet browser and type the IP address into the browser bar. This will take you into the **Web Interface**. Choose your language and browser to enter.

5. Click **Setup** to take you to the **Network Configuration** page. After entering the Setup, click **Network** on the left.

6. You can either choose **Dynamic IP Address** to enable DHCP protocol or **Fixed IP Address** (a static IP that you manually input. This IP address is provided by your ISP. Also, input the **HTTP Port** (as shown), **RTSP Port: 554** as default.

The screenshot shows the SHIELDeye SmartCam user interface. On the left, there is a sidebar with the following menu items:

- VIEW
- MEDIA
- NETWORK** (highlighted)
- Network (highlighted)
- Wifi
- Remote Access
- Onvif Settings
- ALARM
- ADVANCED
- SYSTEM

On the right, there are two configuration windows:

LAN Settings

- IP Configuration Type: Fixed IP Address (selected)
- IP Address: 192.168.23.121
- Subnet Mask: 255.255.255.0
- Gateway: 192.168.23.1
- DNS Configuration Type: Manual DNS
- Primary DNS: 192.168.23.1
- Secondary DNS: 0.0.0.0

Port Settings

6. Select your network configuration. Choose **Dynamic IP Address** to use the DHCP protocol. Choose **Fixed IP Address** (Static IP). Enter the IP address provided by your ISP and HTTP Port as shown below.

Enable Wireless: On Off

7. Select WiFi to connect the IP Camera by **Search**. Enter the password of the WiFi into **Key**. **Click Apply**.

8. Click **Check** to test the wireless set.

Key: **[REDACTED]**
Re-Type Key: **[REDACTED]**
Check Wireless Set: **Check**

Apply **Cancel**

- NOTE:
1. When the device is connected by both WiFi and wired LAN, it will connect to the wired network first.
 2. If users enable Dynamic IP Address and use DHCP to obtain IP address automatically, the IP address will change when the router restarts. This could cause wireless failure. We recommend using Static IP and DDNS settings to avoid this loss.

Connecting by iPhone or Android Devices

Go to the Apple App Store or Google Play, **search** for SHIELDeye, and **download** it for free. Start watching live Camera videos from your mobile device.

Make sure you download the latest version of the SHIELDeye app. The following images are captured from the iOS version of the mobile app. You may notice a slight layout difference in the Android version of the app, but otherwise they both behave in the same manner. Newer app versions may be released since the printing of this manual.

Installing SHIELDeye

App Store

1. Go to Apple Store or Google Play Store.
2. Search SHIELDeye. (Type the entire “SHIELDeye” to get the best result.)
3. Tap to download the free application.

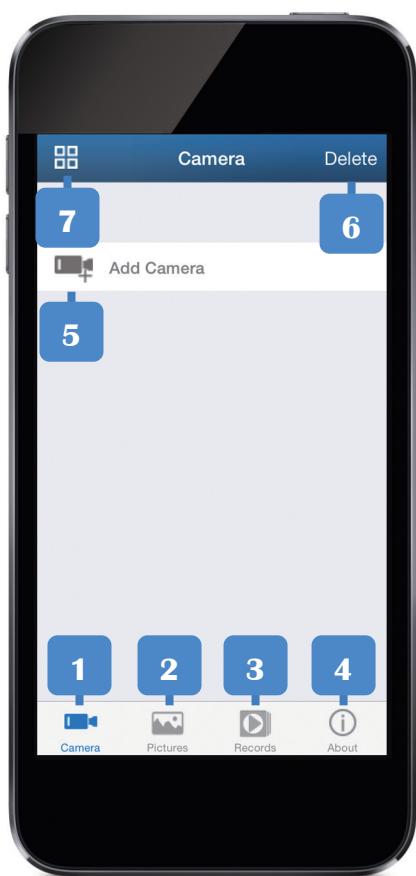

QR Code

1. Take your smartphone and Scan the QR code on the bottom of the IP Camera.
2. Follow the prompts. Remember the default **username**: “admin” and **password**: “123456”.

Running the SHIELDeye App

Understanding the SHIELDeye App

1. **Camera:** View Camera list and some Camera functions.
2. **Pictures:** View snapshots taken by the phone from the video feed.
3. **Records:** View video feed and storage card in remote Camera.
4. **About:** Check the installed app version.
5. **Add:** Add new Cameras.
6. **Delete:** Delete the Cameras from the Camera list.
7. **Grid:** Multiple viewing screens (up to 4 channels).

Camera

Pictures

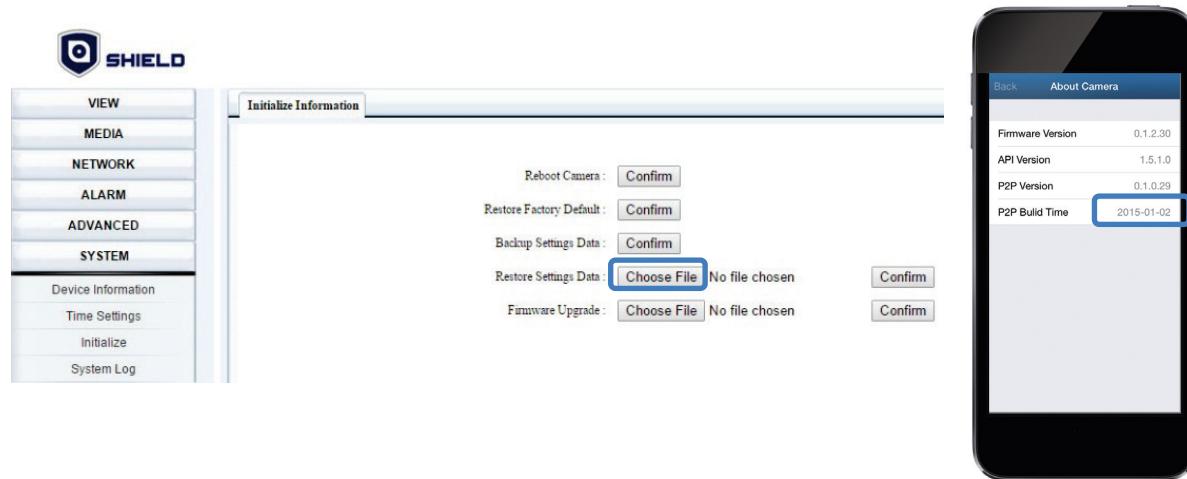

Records

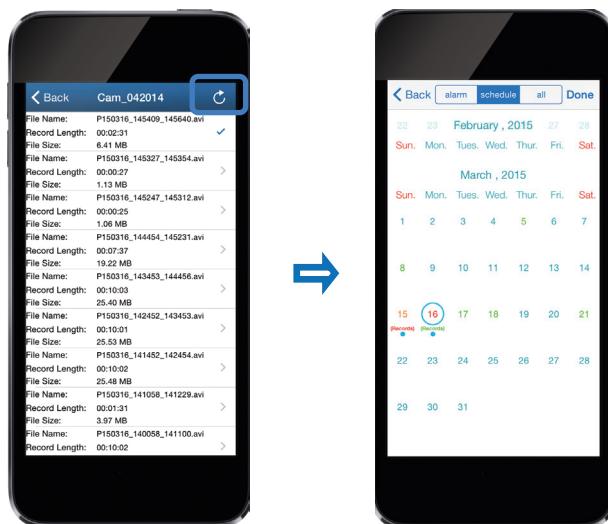

About

Viewing videos on your IP camera by smartphones

Before using the **Recorder** function, please help to update the "P2P Build Time" to be 2015-01-02 through the Web interface.

1. Tap **Records** and you can view the videos on your mobile devices under **Local**, and view the videos in the TF card (microSD Card) of the camera under **Remote**. And click the name of the camera to enter.

2. The videos will appear by the latest time. You can also filter the videos by dates by clicking

Setting Up the SHIELDeye App

Before operating your Camera(s) with your smartphone, you must first register the Camera(s) with the app.

Adding a Camera via Smartphone

There are three (3) methods to add Cameras:

- (1) Search Camera in LAN (2) Scan ID
- (3) Add Manually

1. **SEARCH.** Use When Phone and IP Camera are Connected to Same WiFi Network. Click Search. Tap the DID of the Camera and Finish according to steps 4 and 5.

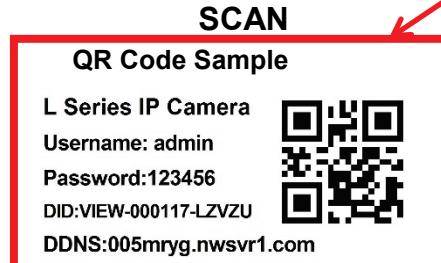

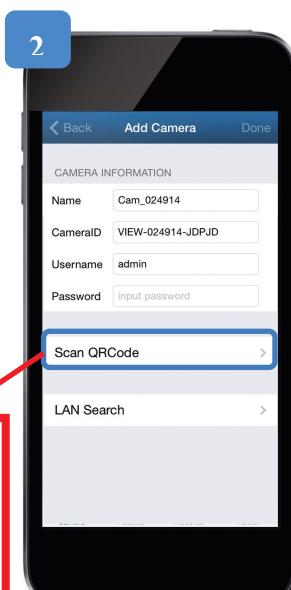

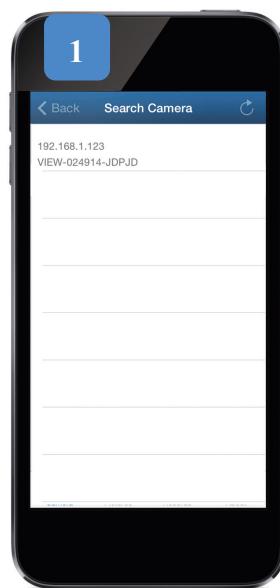

Note if you have more than one Camera in your network, set each one up separately.

2. **SCAN.** Use When Phone and IP Camera are Connected to Different WiFi Networks. Simply tap Scan ID, use your smartphone's Camera to scan the QR code sticker you will find on the bottom of the Camera. This automatically populates the DID box with the Camera's DID. Then just follow steps 4 and 5 to complete.

3. **MANUAL.** Use When You Prefer to Add the IP Camera Manually. Tap in the boxes and type the Camera's DID in the DID box carefully. NOTE: The DID is case sensitive.

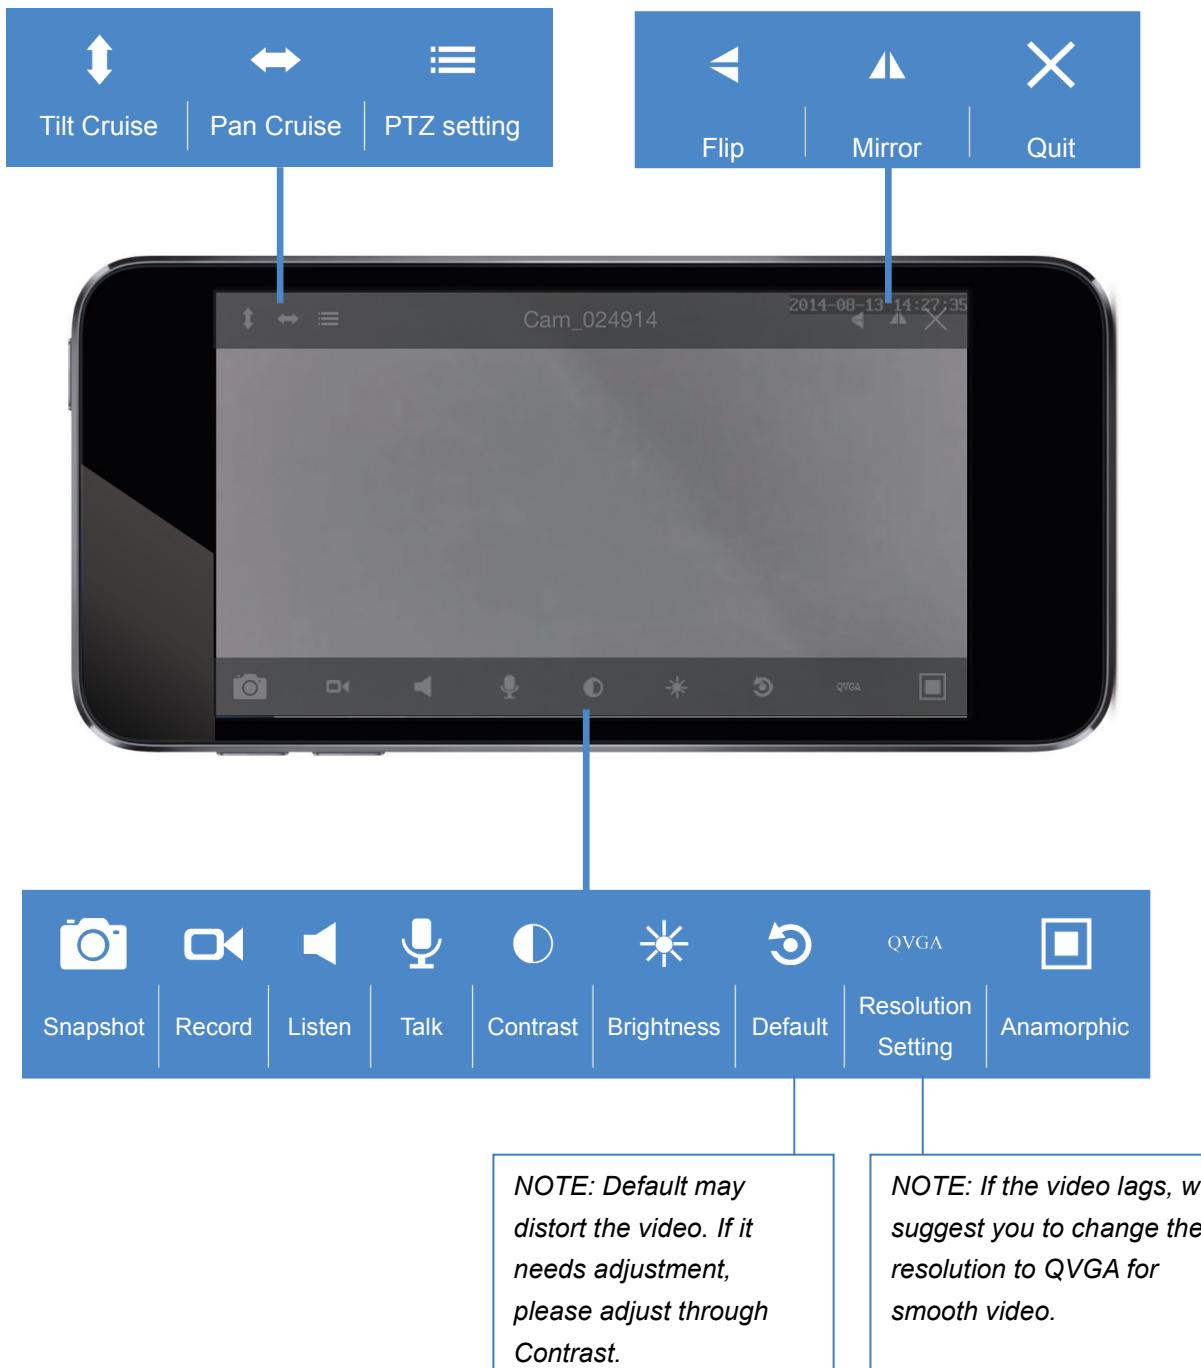

Enter the Camera's password (default is **123456** but we recommend you change this using the software on your PC as soon as possible).

Tap the Name box and create a logical name to help identify it easily. When you're finished, tap back to the Camera List screen.

Limitations of SHIELDeye App - you can't record videos and there is no split screen display. For these, you have to use the Windows software.

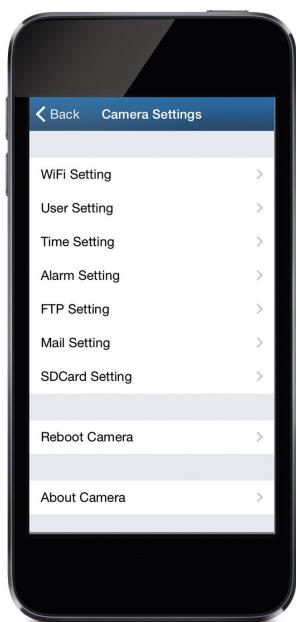

Introducing SHIELDeye App

Advanced Settings

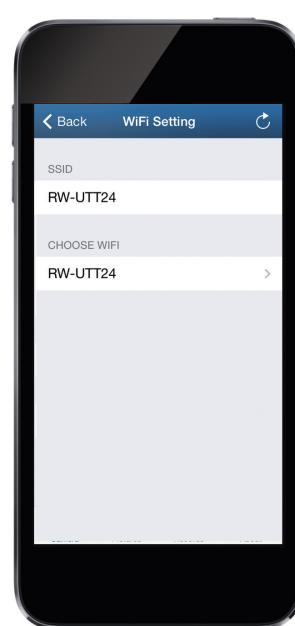

Camera Settings

This is the main screen for accessing various Camera and software settings.

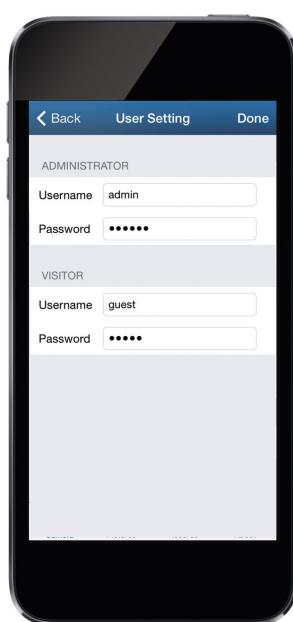

WiFi Setting

Search for an available WiFi SSID connection to link the phone and IP Camera.

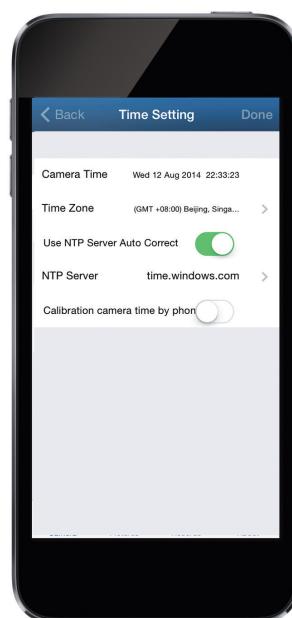

User Setting

Configure accounts with usernames and passwords.

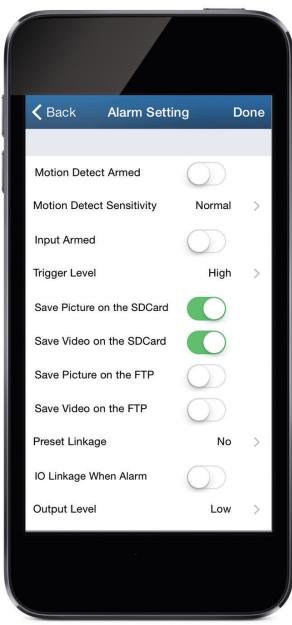

Time Setting

Calibrate the Camera's local time and time zone.

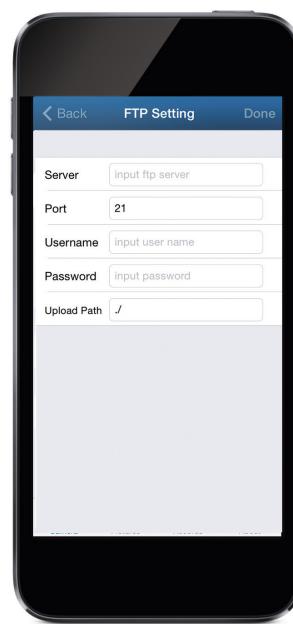

Alarm Setting

Adjust Motion Detect settings and other actions and notifications here.

FTP Setting

Input and store server and port information here. (You must have information on-hand before you start.)

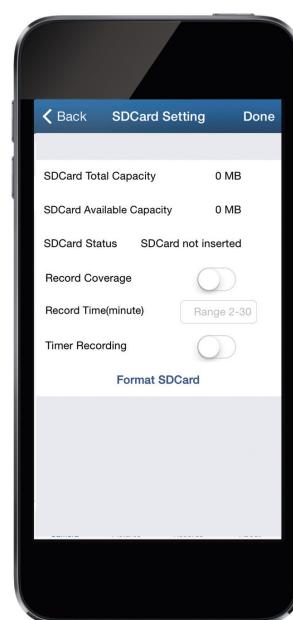

Mail Setting

Set up email accounts of the sender and receiver here before using mail alarm.

SDCard Setting

Find out how much storage is remaining in your memory card. Get information from the Camera's SD card here.

Opening a Web Browser

Open a Web browser such as Internet Explorer (IE), Chrome, Firefox or Safari and type the Camera's IP address into the address bar. *Make sure your Camera is connected to the network, otherwise nothing will show*

- ☺ To find the IP address, you can use the **SearchTool_en.exe** in the CD to find it.
- If you're using IE and connecting to a Camera for the first time, you will need to download and install a plug-in. The IE browser plug-in is quite small and installation is fast. Your operating system and/or virus protection program may ask you for permission to run the file. Select the relevant options available to complete installation. *Restart your browser after installation.*

The “LiveWatch” UI

The LiveWatch UI on the Web browser is almost identical to the SHIELDeye software on the computer. New versions can create slight changes, but it operates the same. Some additional features such as vertical & horizontal patrolling are added.

Preset 1	Camera Angle Preset / Return (up to 8). You can select the angle of the Camera and click to store the angle. While you change the Camera, you can click and return to the original angle.
	Click for Horizontal Patrol
	Click for Vertical Patrol
	Press to Take Pictures
	Click to Record Videos
	Click to View SD Card
	Click to View Recordings
	Back to Home Page

Media Settings

Video Settings

Power Line Frequency : 50Hz ▾ We recommend using 60Hz for a stable frequency.

First stream

Resolution : 1280x720 ▾ Higher **Bit Rate** provides higher video resolution, but it also takes more bandwidth. Please set according to your network and storage recording size.

Bit Rate : 2048 kbps

Frame Rate : 25 fps Higher **Frame Rate** shows better videos but need larger storage.

Second stream

Resolution : 640x360

Bit Rate : 384 kbps

Frame Rate : 15 fps

Third stream

Resolution : 320x180

Bit Rate : 90 kbps

Frame Rate : 10 fps

Subject :

Message :
(The maximum length of 255 Characters)

Test Email settings : Please set parameters at first, and then test it.

Appendix

Connecting to a WAN

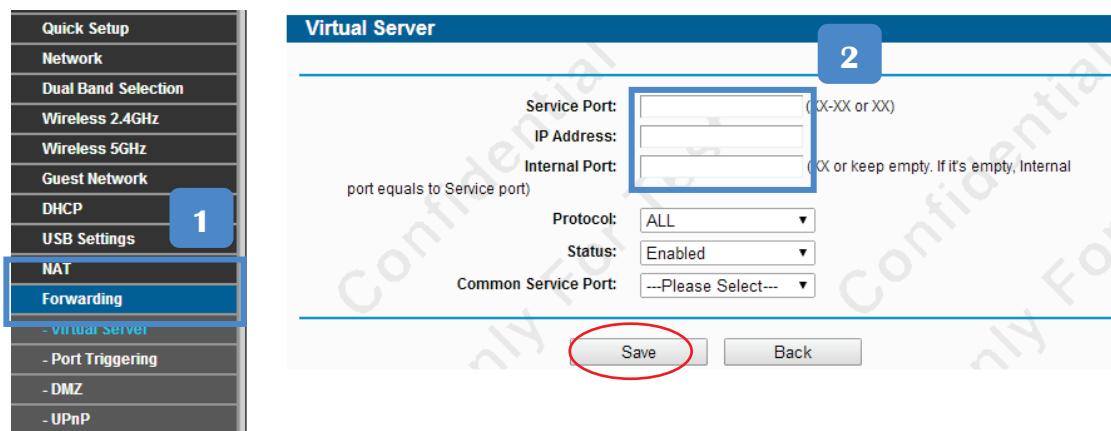

Using a WAN to connect the IP Camera to your desktop or notebook is one more way to provide flexible coverage. Instructions take place on your router, so settings and wordings will differ depending on wireless router models. If users only intend to view by smartphones or other mobile devices, we suggest users to follow instructions for mobile apps.

If you want to use the IP Camera on a desktop or laptop outside your local network, you must perform “port forwarding” on your **router**.

 192.168.xxx.xxx

Open your desktop or laptop you'll be using away from home. Find and Launch your router software. Get into your router settings by clicking **default gateway** in the **address box**.

Note: Different routers might have different interface displays, so the settings might be different. Please refer to the user manual of your router or consult with the router manufacturer.

1. Enter the advanced settings of your router, and Click on Port Forwarding (or Port Mapping/ Port Triggering) to enter Virtual Server. (For some routers, you can just choose Port Forwarding and start Step 2 below.)
2. Please designate the **Service Port** and **Internal Port** the same as **Http port** of your IP Camera. Then enter the IP Address of your IP Camera to IP address box. Please refer to earlier in this book, or you can use **SearchTool.exe**
3. Finish all the settings, and click **Save**. Now, you can visit the IP Camera via WAN by **xxx.xxx.xxx.xxx:Port#** (IP address: port#).
