Wholehog 3 v2.0 Release Notes
Current version: 2.0 (1201) October 16, 2006

New Features

Version 2.0 (build 1201)

Connectivity

This release focuses on network connectivity between products of the Wholehog 3 family. The Wholehog 3 console as well as Hog 3PC now use the same version and build numbers. Hog 3PC and the Hog iPC are now be able to connect to the Wholehog 3 console and vice versa.

Hog 3PC DP and IOP Support

The Hog 3PC software (stand alone and Hog iPC) now connects directly with DPs and IOPs in the same manner as the Wholehog 3 console. This functionality allows an unlimited number of DMX universes from all Wholehog 3 products.

Wings Manager

Playback and Expansion wings must now be configured within the Wing Manager. Auto configuration is no longer supported, however the new interface simplifies the addition and removal process.

Expansion Wing

Support for the new Expansion Wing allows connection of multiple expansion wings, and also includes a rework of the Wing Management interface.

Network Adaptor Selection

When using Hog 3PC stand alone or on a Hog iPC, you are now able to select the active network adaptor in the Control Panel/Network pane. See the on-line help or User Manual for instructions.

Updated User Manual

The Wholehog 3 User Manual has been updated regarding networking, Hog 3PC, and visualizer support. Many other sections have also been edited and revised to reflect recent software changes.

Spanish Language User Manual

A Spanish language version of the on-line help has been added.

Hog 3PC Support for MSD and Capture

All Wholehog 3 systems now support direct visualization with ESP Vision, WYSIWYG, MSD, and Capture.

Note:

Hog 3PC Control Panel Network Settings

Adjusting network settings such as IP settings in the **Control Panel/Network** window will alter the network settings of your Windows Operating System.

Wholehog 3 v2.0 (Build 1201) Bug Fixes
Bug Fixes as of October 16, 2006

4131	Error on merging show
5011	Incorrect NIC selection on windows platform
6251	Memory/Resource Leak during playback for extended uptime
6863	DTLB in malloc() during show load
7998	Wing desklight illumination problems
8249	LIVE @ (level) causes desktop to crash
8273	Playbase for Master Failure error when selecting a List from the List Directory with and without GUARD on
8339	No library for the Coemar Regoled
8448	Hog 3PC: Front Panel GUI Encoder resolution problems
8588	No libraries for the Elektralite 'my' series fixtures.
8696	Cues do not follow Fader values when already crossfading
8758	Encoder wheels causing jumpy color and gobo output
8978	Hog iPC - can not beacon superwidget from Control Panel
9046	Add Network Compatibility with console and PC versions
9131	Virtual Faders Option only working for 1-8
9168	Action of Go When Looping: "Stop At Next" damages the loop
9216	Add library for JB Lighting VaryLED 384
9217	Add library for JB Lighting Varyscan P6
9218	Add library for JB Lighting Varyscan P3
9232	Scrolling Editor Window Croaker
9273	active cuelists are halted when a DP is reset and begins loading show data
9281	Can not enter symbols from keyboard
9284	Color FX encoder requires too many encoder turns
9328	clicking on buttons in autoupdate causes network error
9347	Config Panel doesn't come back after exiting LTC and FP tests
9351	Add library for Martin Wizard
9355	Add link to missing Manuals in console code
9384	Recalling Palettes on client Hog iPC is messy can cause crash
9413	Manual Backup during Auto-backup causes show file corruption
9431	Recording Cuelist over a Scene on the same fader kills desktop .
9433	Studio Command has extra control setting
9445	Right Click in Cuelist window can crash Hog 3PC
9465	v1.3.8.9 Hog3 iso CD does not autorun
9467	Enable Hog 3PC connectivity with all Nodes (DPs, IOPs, etc)
9469	Cannot change iPC network (TCP/IP) settings
9470	Hidden main playback bar when loading a show
9488	PC should include ob and iop bin files from BRANCH_v1-3-8
