## FCC Warning

This equipment has been tested and found to comply with the requirements for a Class A digital device, pursuant to Part 15 of the FCC Rules. These requirements are designed for reasonable protection against harmful interference when the equipment operating in a commercial environment. This equipment can generate and radiate electromagnetic energy and, if not installed and used in accordance with this guide, may cause significant interference with radio communication. Operation of this equipment in a residential area is likely to cause interference to household appliances, in which case the user will be required to amend at his or her own expense.

## **CE Mark Warning**

This is a Class A product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate preventive measures.

## Disclaimer

Contents in this manual are subject to changes without prior notice.

## About this User's Manual

This **User's Manual** aims at helping users to know the key features of **Ether-FSH2400R Fast Ethernet Switch** and to install it in a **10/100BASE-TX Fast Ethernet Local Area Network (LAN)**.

# Product Overview

## Introduction

## Windows Remote Management software

Conventionally, configuring a switch's smart management will require users to attach the computer (serial or printer port) directly to the switch's console port. With Ether-FSH2400R's in-band management capability, users can configure the switch through the Ethernet network. The included Windows management software provides a very simple point-and-click interface to set all the functions. Users can even backup settings to be restored in the future. Best of all, the management utility can configure several switches using the same utility.

The Ether-FSH2400R loses its management settings after power off. You must restore the settings from the utility program. However, if you requirement the settings to remain inside the switch after power off, please choose the Ether-FSH2400RS which has built-in MPU(memory management unit) to store the settings.

## **Management Features**

The Ether-FSH2400R is equipped with many practical management functions.

#### Per-port bandwidth control

allow limiting the outgoing and incoming bandwidth separately for each port.

#### **Central Switch management:**

• Configure several switches at the same time.

#### 802.1Q tag VLAN

enables VLAN assignment across different switches.

#### **VLAN** filter

provide controls to let single-cast, multi-cast, or broadcast traffic to pass between VLANs.

#### **Quality of Service**

for multimedia applications: the 802.1p compliance provide priority traffic management based on port, vlan-tag, or TCP/IP TOS information.

#### Link aggregation

The LACP(Link Aggregation Control Protocol) increase the uplink speed by allowing several ports(Trunk Group) to link between the switches. The switch allows up to 7 trunk groups in 2 or 4 ports. Please make sure that switches on both side are setup for the trunking function.

#### **IGMP Snooping**

■ for IP multicast group management

#### **Broadcast Storm control**

■ prevents the broadcast traffic from overflowing the network.

#### Loop detection

- alert the user when there is a loop formed inside the network on the front panel LED.
- The management software's diagnostic function even report which ports the loop occurs.

#### Port setting

setting port speed and duplex mode, flow control

For Detail information on management functions, please refer to Chapter 5 "Management Software Guide".

## In-Band and Out-of-Band Management

In-Band and Out-of-Band managements are the two distinct methods for switch management.

**In-Band management** that includes WinSmart, Web, Telnet, and SNMP allows users to configure the switch through the Ethernet network.

**Out-of-Band management** means managing the switch outside of the switch's Ethernet network. Console Port management is the most common type of out-of-band management. Out-of-Band management requires the switch to be physically attached to a computer through a RS-232, USB, or Parallel port.

The Ether-FSH2400R is equipped with WinSmart In-band management. It uses the unique RRCP protocol that enables the included Windows utility to manage the switch inside the LAN. However; since it does not use IP protocol, it cannot be managed remotely from the Internet.

## What is VLAN?

### **Defining VLAN**

What is VLAN? Since VLAN solutions and implementations are still very vendor-specific, to define precisely what VLANs will certainly arouse controversy. Nevertheless, most would agree that a VLAN can roughly be equated as a broadcast domain. More specifically, VLANs can be seen as a group of end stations, perhaps on multiple physical LAN segments, which are not constrained by their physical location and can communicate as if they were on a common LAN.

There are several ways to define VLAN membership: port grouping, frame tagging, MAC-layer grouping, network-layer grouping, IP multicast grouping, etc. **Ether-FSH2400R** utilizes port-grouping (port-based VLAN) for the implementation of VLAN in your network.

#### Port-based VLAN

**Ether-FSH2400R** Fast Ethernet Switch fulfills the initial VLAN implementation as defining VLAN membership by groups of switch ports. Port grouping is the most common method of defining VLAN membership, and its configuration is straightforward. But, when a user moves from one port to another, it takes a network manager to manually reconfigure VLAN membership.

With manual VLAN configuration, both the initial setup and all subsequent moves and changes are controlled by the network administrator, enabling a high degree of control. Also moving users manually with VLANs may actually be easier than moving users across router subnets.

### **Table Maintenance via Signaling**

When an end-station broadcasts its first frame, the switch resolves the end-station's attached port with its VLAN membership in cached address tables. As VLAN membership changes, these address tables can be manually updated by a system administrator at a management console.

### 802.1q VLAN Standard

In March, 1996, the IEEE 802.1 Internet-working Subcommittee completed the initial phase of investigation for developing a VLAN standard. The standard, known as 802.1Q, represents a major milestone in enabling VLANs to be implemented. Since the rapid deployment of LAN switching from around 1995, the shift toward LAN switching as a replacement for local/departmental routers, or even shared media devices (hubs) is just accelerating for now.

## What is Priority Queuing?

Priority Queuing is a method of ensuring that high priority traffic gets delivered efficiently, even when during bursts of high traffic load. In this way, traffic such as voice data and video (services which are streaming) are prioritized, helping steady picture and sound quality.

Ether-FSH2400R allows 2-level (*High/Normal*) Priority setting by any of the three types of *priority frames operations*: TCP/IP TOS, VLAN tag or per Port *priority frame operation*.

The QoS setting for priority *per port* means that all packets received by the port will be priority frames; **Ether-FSH2400R** can also judge the priority of frames by checking the specific bits of *VLAN tag* or *TCP/IP TOS/DS* included in the frame format. **Ether-FSH2400R** will judge the priority of frames by checking the specific bits recorded in the type field of packet format to ensure the VLAN or TCP/IP TOS/DS status of packets, then set the threshold of VLAN or TCP/IP TOS/DS to declare the priority of packet.

If you have any plans to implement network telephony or any sort of video conferencing, streaming video/audio or any real-time applications on your network you will need **Ether-FSH2400R** for priority queuing. Its benefit is to dramatically improve the quality of priority services on the network. If priority queuing is not implemented then the quality of these services will depend entirely on the loads on your network. If network traffic is high, the service will not work properly.

## **Product Features**

- Standard Compliance
  - IEEE 802.3 10Base-T Ethernet
  - IEEE802.3u 100BaseTX standard
  - IEEE 802.3u Nway auto-negotiation
  - IEEE802.3x flow control for full duplex, back-pressure for half-duplex
  - IEEE 802.1p/Q tage VLAN and QoS
  - IEEE 802.3ad link aggregation

#### • Hardware Feature

- 24 x 10/100Base-TX Nway ports
- Auto MDI/MDI-X function
- Store-and-Forward architecture
- Non-blocking wirespeed switching architecture
- o 8K MAC address
- 2.5Mbit Embedded memory Buffer.
- o 8.8 Gbps Throughput
- Shared frame buffer with starvation control
- o LEDs
  - Power, Loopdetect, DIAG
  - Link/ACT, FDX/COL, 100M
- Dimensions: 432 × 180 × 44 mm, 19" rack mountable
- Weight: 2.7 kg
- Built-in power supply: 100~240 VAC, 50 ~ 60 Hz, 0.4A, 10 Watts max.

- Smart Remote Managements:
  - Windows Remote Management Software
  - Configure several switches on one program
  - Management through Ethernet network
  - o Configuration of
  - o Bandwidth Control
    - Separate Tx and Rx speed limit control for each port
    - 128Kbps, 256Kbps,
       512Kbps, 1Mbps,
       2Mbps, 4Mbps, 8Mbps
       option
  - o VLAN
    - Up to 32 VLAN groups, up to 24 ports per VLAN group
    - Port based or 802.1Q tag VLAN
    - Ingress rule for ingress filtering control
    - Unicast Inter-VLAN control
    - ARP Broadcast Inter-VLAN control
    - IP Multicast Inter-VLAN control
  - 802.1p Prority: 2-level , Port Based, IP Based(TOS), VLAN TAG(TCI)
  - o 802.3ad Link Aggregation: 7

• Safety/EMI: meet UL, FCC, CE, Korea EMI standard Trunk groups in 2 or 4 ports

- IGMP Snooping for IP multicast group management
- Broadcast Storm Control to limit broadcast traffic
- Status on bandwidth utilization, byte count, packet count, MIB counter
- Loop detection LED on the front panel
- Diagnostic software detects
   Trunking and Loop fault
- Port speed, Duplex Mode, Flow Control

# **2** Preparation before Installation

## **Unpack the Package**

Before you begin the installation of **Ether-FSH2400R** Fast Ethernet Switch, make sure that you have all the necessary accessories that come with your package. Follow the steps below to unpack your package contents:

- 1. Clear out an adequate space to unpack the package carton.
- 2. Open the package carton and take out the contents carefully.
- 3. Put back all the shipping materials such as plastic bag, paddings and linings into the package carton and save them for future transport need.

After unpacking and taking out the entire package contents, you should check whether you have got the following items:

- ☑ Ether-FSH2400R Fast Ethernet Switch
- $\boxtimes$  One AC power cord
- ☑ Rack-mounting kit (screws and mounting brackets)
- Support CD-ROM (The PDF version of this *User's Manual* can be found within)

If any of these above items is missing or damaged, please contact your local dealer for replacement.

Fig. 2-1 Package Contents

## The Front Panel

The front panel is where you can find the twenty-four 10/100Mbps station ports and the LED indicators. For the technical specifications of the ports, please refer to *Appendix A, Product Specifications* for detailed information. For information concerning LED indicators, please refer to *Chapter 4, LED Indicators*.

## **The Rear Panel**

The rear panel is where you can locate the power switch and AC power connector.

### **Power Switch**

You can turn the power switch on /off to activate/deactivate the Switch. To turn on the Switch, press the switch to the ON position. To turn off, press the switch to the OFF position.

### **AC Power Connector**

This is a three-pronged power connector where the power cord should be attached. Just plug the female end of the power cord into the connector, and the male end of the power cord into an AC power outlet. The switch supports an input voltages ranging from  $100 \sim 240 V_{AC}$  @ 50~60 Hz.

2 Preparation before Installation

Fig. 2-3 Rear Panel

# **3** Installation of the Switch

## **Quick Installation**

**Ether-FSH2400R** Fast Ethernet Switch is fully compliant with 10/100BASE-TX Fast Ethernet standards.

### **5 Steps to Quick Installation**

Step 1. Power on the Switch.

*Step 2.* Connect network devices to the Switch: connect either workstation, server, switch, bridge or router to the station port (10/100BASE-TX), using 100 ohm unshielded twisted pair (category 5 UTP) or shielded twisted-pair (STP) cable.

*Step 3.* **Install the Management software:** Please refer to chapter 5 for detail instruction on how to install and configure the management software.

## **Rack Mounting**

**Ether-FSH2400R** Fast Ethernet Switch can also be mounted on a standard size 19-inch rack, which can in turn be placed in a wiring closet with other equipments.

Before you can mount the switch on the rack, first you must attach the mounting brackets on both sides of the switch with screws, and then mount it as a unit on the rack.

To mount the unit on a rack, please follow the steps below:

- Step 1. First, align the holes on the bracket with the holes on both side of the switch.
- Step 2. Insert screws into the holes and then fasten the bracket on one side of the switch with a screwdriver.
- Step 3. Repeat Step 1 and 2 to fasten the bracket on the other side of the switch.
- Step 4. Mount the unit on the rack and align the notches on both brackets with mounting holes on the rack, and then secure the unit with suitable screws.

#### Fig. 3-1 Fastening the brackets on the switch

Fig. 3-2 Attaching the Switch to a 19-inch rack

## **Desktop Installation**

**Ether-FSH2400R** Fast Ethernet Switch has four rubber pads attached on each corner of its underside. These pads serve as cushionings against vibration and prevent the switch from sliding off its position. They also allow adequate ventilation space when you place the switch on top of another device.

#### Fig. 3-3 Desktop installation

• The location you choose to install your switch and the way you configure your network may greatly affect its performance.

## **Installation Site Preparation**

You can mount **Ether-FSH2400R** Fast Ethernet Switch either on desktop or on a 19-inch rack. If you plan to mount the switch on desktop, please choose a steady, level surface in a well-ventilated area that is free from excessive dust. In any case, the installation site chosen for your switch has to comply with the following requirements:

- The surface where you want to mount the switch must be able to sustain at least 2.7 kg.
- Do not place heavy objects on top of the switch.
- The location must preferably be free from excessive dust, away from heat vent, hot-air exhaust and direct sunlight.
- The switch should not be placed near large electric motors or other strong electromagnetic

#### 10 Ether-FSH2400R Fast Ethernet Switch User's Manual V1.0

sources. As a reference, the strength of the electromagnetic field on site should not exceed the (RFC) standards for IEC 801-3, Level 2(3V/M) field strength.

- The air temperature in the location should be within a range of 32 to 122 °F (0 to 55°C).
- The relative humidity in the location should not exceed 95% non-condensing humidity.
- The distance between the RJ-45 port and the standard network interface should not exceed 100 meters.
- Adequate space should be allowed in front of all the ports, so that each port is easily accessible for cable connections.

## **Cabling Guide**

#### For 100BASE-TX and 1000Base-T ports

The 24 RJ-45 station ports require Cat. 5 twisted-pair UTP/STP cable for connection. When configuring within the 10/100BASE-TX cabling architecture, the cable distance should be within 100m.

The following table summarizes the cable requirement for 10/100/1000BASE-TX connection:

10BASE-T	100 ohm Category 3, 4, 5 UTP/STP cable
100BASE-TX	100 ohm Category 5 UTP/STP cable

#### Auto MDI/MDI-X function

The SNMP-FSH2400R is equipped with Auto-MDI/MDI-X function, which allows you to use straight-thru cable even when connecting to another switch/hub. Simply use the straight-through cable for all types of 10/100BASE-TX connections, either to a PC or to a networking device such as other hub or switch.

Connection Specification	10 /100Base-TX Ports
Interface	RJ-45
Cable to Use	
To an end station	Straight-through twisted-pair cable
To a hub/switch	Straight-through twisted-pair cable
Maximum Distance	100 meters

Table 2-2 Cabling type for 10/100BASE-TX and 1000Base-T

#### Making your own UTP/STP cable

The twisted-pair cable provided an eight-pin plug at each end that mate with the twisted-pair port on

the adapter and with a RJ-45 wall jack. If you are marking your own interface cables to use as dedicated network wiring or as extension cables, please follow the guideline below:

- Each UTP/STP cable contains eight wires in either 568A or 568B color scheme (please see Fig 2-7). The wires are twisted in pairs to reduce cross talk and various signal noises.
- □ Each pairs composed of one positive wire and one negative wire. The positive are marked by stripe color while the negative are marked by solid color. A pair of wires is composed of one stripe and one solid wire of the same color.
- □ There are four pairs of wires, they are in group of {1 and 2}, {3 and 6}, {4 and 5}, {7 and 8}. Please see Fig 2-8 for diagram.
- When making a cable, make sure the correct pairs of wire are twisted together before inserting into the jack. Incorrect twisted pair will cause the cable to malfunction or signal degradation over short distance.
- □ A straight-thru cable have jacks on both end following the same color scheme.
- □ A cross-over cable have jacks on both end following the opposite color scheme (one 568A and one 568B)
- □ While 10/100Base-TX only use the first 2 pairs of wires (1+2, 3+6). However, please still make sure all 4 pairs are twisted and insert into the jack in correct order.

## **Connecting to Power**

**Ether-FSH2400R** Fast Ethernet Switch features a universal auto-select power supply unit, which allows a power connection to a wide range of input voltages from 90 to  $240V_{AC}$  @ 50 ~ 60Hz. To establish its power connection, simply plug the female end of the power cord into the power connector on the rear of the switch and the male end of the power cord into a suitable power outlet. Once you have correctly plugged in the power, you can then turn on the Power Switch to activate the switch.

Fig 3-13 Connecting the Switch to power outlet

### 4 LED Indicators

# **4** LED Indicators

Before connecting any network device to **Ether-FSH2400R** Fast Ethernet Switch, you should take a few minutes to look over this chapter and get familiar with the front panel LED indicators of your Switch.

## System LEDs

- **Power** (green) to indicate power on/off status
- **LoopDet** (yellow) to indicate network loop has formed inside the network. You can use the management program's diagnostic function to find out which port the loop occurs.
- **DIAG** (yellow) to indicate the power on self test (POST) fails status, which indicate a fault chip.

## **Station Port LEDs**

For port  $1 \sim port \ 24$ 

- Link/Act (green) to indicate linking status and activity
- FDX/Col (yellow) to indicate Full Duplex transmission mode and collision status
- 100 M LED (red) to indicate 100 Mbps speed

## LED Table

LED indicator	Color	Status	Meaning
System LEDs			
Power LED	Green	ON OFF	Power ON Power OFF
LoopDet LED	<ul> <li>Yellow</li> </ul>	ON OFF	Detect a loop even in the network Loop not detected
DIAG LED	• Yellow	ON OFF	POST has failed POST is O.K.
Station Port LEDs			
Link/Rx	• Green	ON Blinking OFF	Connection is made Transmitting/Receiving No connection is made
FDX/Col	<ul> <li>Yellow</li> </ul>	ON Blinking OFF	Full Duplex Collision ( <i>in half duplex</i> ) Half Duplex
100M	• Red	ON OFF	100Mbps speed 10Mbps speed

Table 4-1 System & Station Port LEDs

# **5** Management Software Guide

## Introduction

The OvisLink Windows remote management software allows user to configure the management function though the LAN port. It uses a specialized RRCP protocol and does not use the IP protocol. It operates inside the Ethernet network. The Ether-FSH2400R restore to factory's default setting after power off, user's settings must be restored from your PC's configuration file. If you need the user's setting to stay inside the switch's flash memory, please choose the Ether-FSH2400RS model..

## **Important Information**

- WinPCap application (included in the CD) must be installed before installing the management software
- The Ether-FSH2400R will lose its settings after power off. Therefore, please remember to save the configuration file for restoration. The configuration are named by the switch's MAC address
- Please make sure to press the "Update" button after changes
- The Ether-FSH2400R has no reset button, but it will restore to factory's default settings after power off. Therefore, please power off and on again to reset the switch.
- To restore the switch's settings. Load the configuration file from *system->load configuration* menu. Alternatively, you can set auto load configuration in the *option->auto load and detect* menu.
- The Ether-FSH2400R cannot change the authentication key, this function require a MPU.
- If the application says authentication failure and the authentication key is correct, please press "edit Switch Database" and clear all entries.

## **Minimum system requirements**

To use Remote Management Application, it is necessary that your system include the following components:

#### Hardware

- Pentium class processor
- 32 MB RAM

#### Software

- Windows® 98 (Second Edition for non-English operating systems), WinME, WinNT 4.0 with Service Pack 6, Win2000, or WinXP
- WinPCap 3.0 (included in the CD)

## Installing the Software

Please follow the procedures below to install the management program into your Windows

- 1. Insert the OvisLink CD into your computer, the Product CD menu should show up automatically. If not, on the File Explorer, please click on "setup.exe" to begin.
- 2. Click on "ETHER/SNMP Series" and select the "Ether-FSH2400R"
- 3. Follow the instruction on screen to install the "WinPCap" and "The Remote Management Utility"
- 4. After you install Management Application on your computer, an application icon **RMT** is placed on the desktop.

## **Starting the Software**

- To start Management Application, go to the desktop and double click on the MT icon. (Or select "Start->Program ->RMT->RMT" from the Start menu)
- 2. You can select one network adapter. The adapters are displayed in the combo box.

3. The program will search for all WinSmart switches on the network and display them. The utility can configure only one switch at a time, if you have more than one WinSmart switch, please choose one to configure by pull down the "Selected Switch Mac" field.

*Note:* If your switch doesn't show up in the menu. Please reset the switch and press "update button".

**Note2:** The Ether-FSH2400R does not support the "Authentication Key" feature. Please do not change the authentication key. If you have changed the authentication key by accident and have difficult configuring the switch, please remove the RMT software using the Control Panel's Add/Remove program. Then re-install the Management Program again.

There are 4 major functions on the management screen "Status", "Configuration", "Security", and "Diagnostic". We will discuss them in the following sections. *Please make sure to save to the hardware after changes.* 

## **Status Functions**

Click on the Status Tab of the management screen will bring you the overview, port status, and MIB counter sub menus.

### **MIB Counter Submenu**

You can view the MIB counter about the RX, TX and Diagnostic Counter. Click the Diagnostic

#### 5 Management Software Guide

Counter column header, there are three object you can select, such as Drop count, CRC error count and Collision count.

	:: 00:4F:52:01:02:0A				
1 counter	ation   Security   Dia; Status   MIB Counter	gnostacs

16	0	nackate	0	nagkate	التى
	Packet Count Band	width Utilizatio			

#### **Byte Count Button**

You can set the unit of the RX and TC counter to Byte count.

#### **Packet Count Button**

You can set the unit of the RX and TC counter to Packet count.

#### **Bandwidth Utilization Button**

Displayed the per-port traffic utilization. It will set the TX, RX and Diagnostic Counter to utilization mode.

#### About Polling

- You can start counter by click the Start button, and click the Stop Button to stop.
- Clear Counter button is use to clear all MIB counters, it will reset the counters to 0.
- Polling interval button is used to set the time interval for the frequency of queried.

#### Port Status Submenu

You can view the port status of the switch that you select. The list box will show the status of port1, port2...,and port26. The port status includes port type, enabled status, link status, speed duplex, flow control, Tx bandwidth control, Rx bandwidth control, and trunk setting status.

	OK Cancel	]

**Select ports to config:** Please select a port to set settings

**Port Enable:** 

The default is to enable the port. Check the "Disable" if you want to disconnect the port

**Tx Bandwidth Control** 

Enable this function will restrict the given port's sending speed to the selected value.

#### **Rx Bandwidth Control**

Enable this function will restrict the give port's receiving speed to the selected value

#### **Speed Advertised**

Changing the speed and duplex mode of a given port.

## **Global Configuration Submenu**

Global Configuration is used to configure the global port control registers. Press the Refresh button to read the status of the registers. Press the Update button to set the registers as shown in this frame.

## **Diagnostic Function**

## **Fault Information**

Show some information likes Trunk Port Fault, Network Loop Fault Test, and Gigabit PHY existence report for Gigabit Port G1G2 (only Ether-FSH2402GT provide with G1G2 Gigabit Ports).

Ether-FSH2400R Remote Management Switch			
System Option Help Selected Switch Mac: 00:4F:52:01:02:0A (S) Status   Configuration   Security Diagno Fault Information   Device Reset   Script		1	
Trunk Port Fault Pass Trunk group	Network Loop Fault         Pass           Loop Fort Detected:		
GigaPHV1: Not exist GigaPHV2: Not exist	Refresh		

### **Device Reset**

The software reset will reset the system to the initial state. The MAC table and VLAN table data will be kept. All the current user configured values of internal registers will be kept. The EEPROM download will NOT be done again. But the system will restart the process of Auto Negotiation . The hardware reset will reset all the system at a initial state like the process of power on hardware reset.

## **Pull down Menus**

There are totally of 4 pull down menus at the top of the screen. We will explain the function of each one.

#### System menu

**Save and Load Configuration** You can save or load the configuration to a file.

**To save a file**, do one of the following: In the menu, click **System | Save Configuration .** 

Note: The configuration file are named by the switch's MAC address.

**To load a file**, do one of the following: In the menu, click **System | Load Configuration .** 

In the **Open File** dialog box, select a ".rrcp" file and click **Load**.

In the Setting Active Switch dialog box, select a switch you want to set, and click OK.

#### **Options menu**

#### **Hello polling**

The Management Application send hello packet to switches in the network, and this function is used to set the generation interval of hello control frame. To reduce unnecessary control frame traffic, a value of 2 seconds is recommended.

#### **Counter polling**

The Management Application send packet to read the counter registers, and this function is used to set the generation interval of these packets. To reduce unnecessary control frame traffic, a value of 6 seconds is recommended.

#### Auto Detect and Reload

The function allows the program to automatically load the configuration file and restore to the switch. This is recommend for Ether-FSH2400R users. Please check the "load application file automatically" to activate.

## Ether-FSH2400R Fast Ethernet Switch

## **Appendix A Product Specifications**

#### • Standard Compliance

- IEEE 802.3 10BASE-T Ethernet
- IEEE 802.3u 100BASE-TX Fast Ethernet
- IEEE 802.1q VLAN standard
- IEEE 802.1p Class of Service
- IEEE 802.1ad Link Aggregation
- ANSI/IEEE Std 802.3 NWay auto-negotiation
- Topology

Star

- Port Configuration
  - $24 \times 10/100$  BASE-TX Port
  - Auto MDI/MDI-X
- Data Rate
  - 10BASE-T Ethernet 10 Megabits/sec (half-duplex) 20 Megabits/sec (full-duplex)
  - 100BASE-TX Fast Ethernet 100 Megabits/sec (half-duplex)
    - 200 Megabits/sec (full-duplex)
- **Trunking**: up to 7 trunk groups in 2, 4, or 8 port group
- VLAN
  - Port Based
  - 802.1p Tagged VLAN
  - VLAN filtering rules
- **Priority (QoS) Types** 
  - VLAN based

• Humidity	< 95% (non-condensing)
• Safety / EMI Certificates	UL, TUV, VDE, FCC Class A, CE

## Appendix B Troubleshooting

This appendix contains specific information to help you identify and solve problems. If your switch does not function properly, please make sure it is set up according to the instructions on the manual.

If you suspect your switch is not connected correctly to your network, check the following points before you contact your local dealer for support.

- Make sure the Power is ON (Check the Power LED).
- Make sure the cable is connected properly on both ends.
- Make sure that the maximum cable length between switch and end node does not exceed 100 meters (for 10/100BASE-TX connection).
- Make sure that the maximum switch-to-hub/switch cable distance does not exceed 100 meters (for 10/100BASE-TX connection).
- Verify that the cabling type used is correct.
- Check the corresponding Link/Act, FDX/Col, 100M for signs of faulty connection. Check the status of the cable attachment. If the problem persists, try a different cable.
- Try another port on the Switch.
- Turn off power supply to the Switch. After a while, turn it on again to see if it resumes to its normal function.
- If you find out where the problem is but cannot solve it by yourself, or you simply cannot locate what is at fault, please contact your local dealer for technical support.
