

SOLAR HOUSE NUMBER

info@missolar.com
made in China

User's Manual

INSTALLATION

- 1) Choose a location where solar panel could receive full and most sunlight during daytime. Shadow will effect the recharge of battery inside the house number.
- 2) There should be no other light source shining on the top of solar house number at night. otherwise the solar house number may not light up.
- 3) Fix the solar house number on a wall. (Refer to Fig.1) Snap units together through the grooves to form your complete address number.

OPERATION

- 1) To start operation, pull out the plastic strip from battery cabinet (as shown in figure 2) The house number will turn automatically during the night.
- 2) The operating hours of the solar house number at night can vary from a few hours to through out the night depending on the number of hours of sunlight received during the day.

INSERT DIGIT SHEET (Refer to fig.3)

Insert digit sheet, each unit has digit sheets from 0 to 9 and A,B,C

NOTE: Before inserting, please remove the transparent films from the sheets

REPLACING THE BATTERIES (Refer to fig.4)

For best results, replace the battery every 6-12 months.

- 1) Open the cover of battery compartment and take out old battery.
- 2) Put in a new rechargeable alkaline battery in correct position.
- 3) Close the cover.

CAUTION: DO NOT DISPOSE OF BATTERY IN FIRE.

TROUBLE SHOOTING

If your solar light does not turn ON at dusk, despite following to the above instructions, please check the following steps:

- 1) Make sure that other light sources are not shining on the lamp.
- 2) Ensure the solar house number is not in the shade during the day.
- 3) Make sure the plastic strip has been pulled out.
- 4) Check that the batteries is installed correctly.

MAINTENANCE

Clean the solar panel regularly with a damp cloth to guarantee optimum performance of the solar panel. If any deposit on the solar panel, please clean it with alcohol liquid softly (do not use any other type of solvents) Otherwise, the solar panel performance will be affected. Please also be careful not to apply too much pressure on the panel while cleaning.

Important Notice To Users

The operating hours of the solar lamp during the night depends on the solar charge received during the day.

On a bright sunny day, the solar lamp may operate for more than 8 hours during the night, whereas on a cloudy day, it may operate for a few hours only. During winter, and especially when there is hardly any sunshine, the solar lamp may not operate at all.

We recommend that the battery in the solar lamp be taken out for charging electrically by the NiMH (not RAM) charger for use during winter. When the lamp is not being used for more than a month, remove the battery and store them separately.

STORAGE:

When the lamp is not being used for more than a month, remove the batteries and store them separately.
