Thank you for purchasing this Esco Biological Safety Cabinet. Please read this manual thoroughly to familiarize yourself with the many unique features and exciting innovations we have built into your new equipment. Esco provides many other resources at our website, www.escoglobal.com, to complement this manual and help you enjoy many years of productive and safe use of your Esco products.

Warranty Terms and Conditions

Esco products come with either a 1, 2 or 3 year limited warranty, depending on the product purchased, beginning on the date of shipment from any Esco international warehousing location. To determine which warranty applies to your product, refer to the appendix below.

Esco's limited warranty covers defects in materials and workmanship. Esco's liability under this limited warranty shall be, at our option, to repair or replace any defective parts of the equipment, provided if proven to the satisfaction of Esco that these parts were defective at the time of being sold, and that all defective parts shall be returned, properly identified with a Return Authorization.

This limited warranty covers parts only, and not transportation/insurance charges.

This limited warranty does not cover:

- Freight or installation (inside delivery handling) damage. If your product was damaged in transit, you must file a claim directly with the freight carrier.
- Products with missing or defaced serial numbers.
- Products for which Esco has not received payment.
- Problems that result from:
 - External causes such as accident, abuse, misuse, problems with electrical power, improper operating environmental conditions.
 - Servicing not authorized by Esco.
 - \circ ~ Usage that is not in accordance with product instructions.
 - Failure to follow the product instructions.
 - Failure to perform preventive maintenance.
 - Problems caused by using accessories, parts, or components not supplied by Esco.
 - Damage by fire, floods, or acts of God.
 - $\circ \quad \mbox{Customer modifications to the product}$
- Consumables such as filters (HEPA, ULPA, carbon, pre-filters) and fluorescent / UV bulbs.
- Esco is not liable for any damage incurred on the objects used on or stored in Esco equipment. If the objects are highly valuable, user is advised to have in place independent external preventive measures such as connection to a centralized alarm system.

Factory installed, customer specified equipment or accessories are warranted only to the extent guaranteed by the original manufacturer. The customer agrees that in relation to these products purchased through Esco, our limited warranty shall not apply and the original manufacturer's warranty shall be the sole warranty in respect of these products. The customer shall utilize that warranty for the support of such products and in any event not look to Esco for such warranty support.

Esco encourages all users to register their equipment online at www.escoglobal.com/warranty or complete the warranty registration form included with each product.

ALL EXPRESS AND IMPLIED WARRANTIES FOR THE PRODUCT, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES AND CONDITIONS OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE LIMITED IN TIME TO THE TERM OF THIS LIMITED WARRANTY. NO WARRANTIES, WHETHER EXPRESS OR IMPLIED, WILL APPLY AFTER THE LIMITED WARRANTY PERIOD HAS EXPIRED. ESCO DOES NOT ACCEPT LIABILITY BEYOND THE REMEDIES PROVIDED FOR IN THIS LIMITED WARRANTY OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, ANY LIABILITY FOR THIRD-PARTY CLAIMS AGAINST YOU FOR DAMAGES, FOR PRODUCTS NOT BEING AVAILABLE FOR USE, OR FOR LOST WORK. ESCO'S LIABILITY WILL BE NO MORE THAN THE AMOUNT YOU PAID FOR THE PRODUCT THAT IS THE SUBJECT OF A CLAIM. THIS IS THE MAXIMUM AMOUNT FOR WHICH ESCO IS RESPONSIBLE.

These Terms and Conditions shall be governed by and construed in accordance with the laws of Singapore and shall be subject to the exclusive jurisdiction of the courts of Singapore.

Technical Support, Warranty Service Contacts

USA: 1-877-479-3726 Singapore: +65 65420833 Global Email Helpdesk: support@escoglobal.com Visit http://www.escoglobal.com/ to talk to a Live Support Representative Distributors are encouraged to visit the Distributor Intranet for self-help materials.

Product Appendix, Warranty Listings

Biological Safety Cabinets, Laminar Flow Cabinets, HEPA-Filtered Cabinets (except Streamline brand)	The warranty periods for BSC may vary by country. Contact your local distributor for specific warranty details.
Laboratory Fume Hoods	1 year limited.
Ductless Fume Hoods	3 years limited for Ascent Opti's, 5 years for Ascent Max's.
Cleanroom Equipment	1 year limited.
Laboratory Ovens and Incubators	1 year limited.
CO ₂ Incubators	2 years limited.
Containment/Pharma Products	2 years limited.
Ultralow Temperature Freezer	3 years limited. 60 months on Compressor.

The warranty period starts two months from the date your equipment is shipped from Esco facility for international distributors. This allows shipping time so the warranty will go into effect at approximately the same time the equipment is delivered to the user. The warranty protection extends to any subsequent owner during the warranty period. Distributors who stock Esco equipment are allowed an additional four months for delivery and installation, providing the product is registered with Esco. User can register product online at www.escoglobal.com/warranty or complete the warranty registration form included with each product.

Policy updated on 12th Apr 2011 (This limited warranty policy does not apply to products purchased before 12th Apr 2011)

Introduction

1. Products Covered

Esco Class II Biological Safety Cabinet						
Model Electrical Rating 1.2 meters (4 feet) 1.8 meters (6 feet)						
Streamline	220-240 V AC, 50Hz, 1Φ	SC2 – 4A1	SC2 – 6A1			
	110-130 V AC, 60Hz, 1Φ	SC2 – 4A2	SC2 – 6A2			
	220-240 V AC, 60Hz, 1Φ	SC2 – 4A3	SC2 – 6A3			

2. Safety Warning

- Anyone working with, on or around this equipment should read this manual. Failure to read, understand and follow the instructions given in this documentation may result in damage to the unit, injury to operating personnel, and / or poor equipment performance.
- Any internal adjustment, modification or maintenance to this equipment must be undertaken by qualified service personnel.
- The use of any hazardous materials in this equipment must be monitored by an industrial hygienist, safety officer or some other suitably qualified individual.
- Before you process, you should thoroughly understand the installation procedures and take note of the environmental / electrical requirements.
- In this manual, important safety related points will be marked with the symbol.
- \land
- If the equipment is used in a manner not specified by this manual, the protection provided by this equipment may be impaired.

3. Limitation of Liability

The disposal and / or emission of substances used in connection with this equipment may be governed by various local regulations. Familiarization and compliance with any such regulations are the sole responsibility of the users. Esco's liability is limited with respect to user compliance with such regulations.

4. European Union Directive on WEEE and RoHS

The European Union has issued two directives:

• Directive 2002/96/EC on Waste Electrical and Electronic Equipment (WEEE) This product is required to comply with the European Union's Waste Electrical &

Electronic Equipment (WEEE) Directive 2002/96/EC. It is marked with the following symbol:

Esco sells products through distributors throughout Europe. Contact your local Esco distributor for recycling/disposal.

• Directive 2002/95/EC on Restriction on the use of Hazardous Substances (RoHS)

With respect to the directive on RoHS, please note that this hood falls under category 8 (medical devices) and category 9 (monitoring and control instruments) and is therefore exempted from requirement to comply with the provisions of this directive.

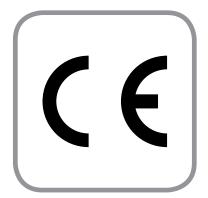

vi

Declaration of Conformation

In accordance to EN ISO/IEC 17050-1:2010

We, Esco Micro Pte. Ltd. of 21 Changi South Street 1 Singapore, 486777 Tel: +65 6542 0833 Fax: +65 6542 6920

declare on our sole responsibility that the product:

Category	: Class II Biological Safety Cabinet
Brand	: Streamline
Model	: SC2-4A1, SC2-6A1

in accordance with the following directives:

2006/95/EEC	: The Low Voltage Directive and its amending directives
92/31/EEC	: The Electromagnetic Compatibility Directive and its amending
	directives

has been designed to comply with the requirement of the following Harmonized Standard:

Low Voltage	: EN 61010-1:2010
EMC	: EN 61326-1:2006 Class B
Design/	: EN 12469 (2000) Class II Biological Safety Cabinet
Performance	
Criteria	

More information may be obtained from Esco's authorized distributors located within the European Union. A list of these parties and their contact information is available on request from Esco.

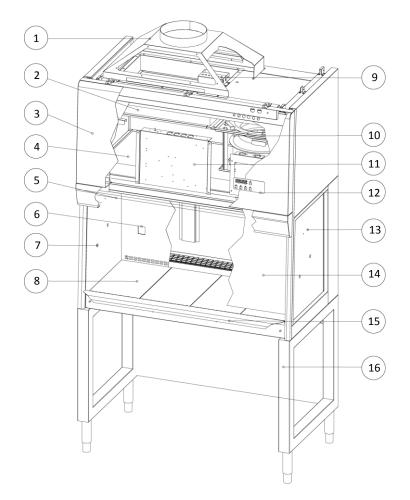

XQ Lin Group CEO, ESCO

This Declaration of Conformity is only applicable for 230V AC 50/60Hz units

viii

Chapter 1 - Product Information

1.1 Quick View

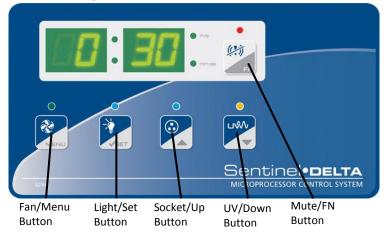

- 1. Exhaust collar (optional)
- 2. Exhaust HEPA filter
- 3. Hinged front panel
- 4. Downflow ULPA filter
- 5. Fluorescent lamps
- 6. Electrical outlet
- 7. Service fixture provision
- 8. Stainless steel multiple tray
- 9. Sensor box
- 10. Blower
- 11. Electrical panel
- 12. ESCO Sentinel Delta Microprocessor Control
- 13. Standard IV Bar Retrofit Kit Provision
- 14. Tempered glass sliding sash window
- 15. Powder coated armrest
- 16. Leveling feet support stand (optional)

2

2.1 Sentinel Delta Control System

Fan/Menu Button

- Turns on and off the fan in normal condition.
- Serve as MENU (cancel) button in MENU mode.

Light/Set Button

- Turns on the lamp in normal condition.
- Serves as SET button in MENU mode.

Socket/Up Button

- Turns on/off the electrical socket (retrofit kit) in normal condition.
- Serves as UP button in MENU mode.

UV/Down Button

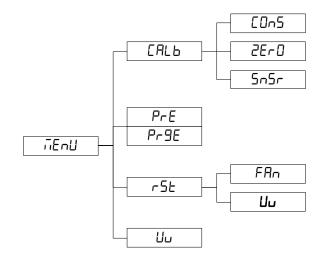

- Turns on/off the UV lamp in normal condition.
- UV can only be turned on when both fan and light are off.
- Eyes and skin should not be exposed to direct UV light.
- UV light should not be relied upon as the sole decontaminating agent.
- Check the UV interlock regularly for correct operation.
- Serves as DOWN button in MENU mode.

Mute/FN (Function) Button

- Turns on/off audible alarm.
- **Mute/FN + Fan/Menu** to access MENU mode from normal condition, or exit MENU mode to normal condition. MUTE/FN and FAN/MENU buttons need to be pressed concurrently.

2.2 Menu Options

2.2.1 [ALb (CALB)

Press LIGHT/SET button to enter the CALIBRATION (CALB) menu. Use FAN/UP or LIGHT/DOWN button to move through the available options: SET TEMPERATURE CONSTANT (CONS), ZERO AIRFLOW SENSOR (ZERO), and CALIBRATE AIRFLOW SENSOR (SNSR).

Once calibration is properly performed, airflow velocity will be displayed when fan is on, and airflow alarm will be triggered if it drops below pre-defined fail point. If calibration has not been performed or done wrongly, airflow velocity won't be displayed; instead "FAN ON" message will be displayed.

2.2.2. PrE Pr9E (PRE PRGE)

Press LIGHT/SET button to enter PRE PURGE TIMER (PRE PRGE) menu. Pre purge time allows system (fan and airflow sensor) to be stabilized before user has full access to the BSC. By default, pre purge timer is set to 3 minutes, and can be set between 0 to 15 minutes.

2.2.3 -5t (RST)

Press LIGHT/SET button to enter RESET HOUR METER (RST) menu. Fan hour meter or UV hour meter is reset back to 0 by choosing FAN HOUR METER (FAN) or UV HOUR METER (UV) respectively.

2.2.4 Uu (UV)

Press LIGHT/SET button to enter the UV TIMER (UV) menu. UV timer allows control system to switch off the UV light automatically after a fixed period. By default UV timer is set to 0, and UV must be manually switched off after switching on. UV timer can be set between 0 to 99 minutes.

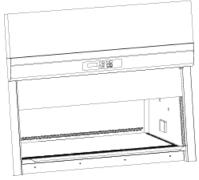

2.3 Alarms and Warnings

BSC uses alarms to indicate that the condition inside the BSC is not safe for the operator, so check the LCD display to understand the cause of these alarms. The most common alarm is the SASH ALARM that indicates that the sash is neither at the normal operating height nor at fully closed position (UV mode) – this condition can easily be corrected by putting the sash at the appropriate operation position.

4

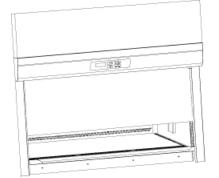

3.1 Sash Window Operation

3.1.1 Sash Window State

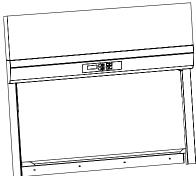

Sash is fully open

- ✓ Blower can be active
- ✓ Fluorescent lights can be used
- Unsafe working condition

Sash is in safe position

- ✓ Blower can be activated
- ✓ Fluorescent lights can be used
- ✓ Safe working condition

Sash is fully closed

- ✗ Blower can't be activated
- × Fluorescent lights unusable

3.1.2 Using Sash Window

- The sash window should be fully closed when the cabinet is not in use. This helps keep the work zone interior clean.
- The sash window should always be in the normal operating height at all times when the cabinet is in use. Even if the cabinet is left unattended, but the blower is on, the sash window should never be moved from the normal operating height, unless during loading or unloading of materials/apparatus into the cabinet.
- The alarm will be activated whenever the sash window is moved from the normal operating height.
- Whenever the sash window is moved to the correct height from a higher or lower position, the light will automatically be turned on as a signal to the user.
- The sash window may be opened to its maximum position for the purpose of loading/unloading of materials/apparatus into the cabinet. When the sash window is fully opened, the alarm sound may be muted by pressing MUTE button but, will be automatically sounded again after 5 minutes to remind the user that it is not safe to work in the cabinet and the light will be turned on to facilitate cleaning.

3.2 Starting and Shutting Down the BSC

3.2.1 Turning on the BSC

- 1. Raise the sash to the indicated normal operational height (READY state). The lamp will turned on when this height is reached.
- 2. Turn on the fan by pressing the FAN button. Input the Fan PIN if asked (if PIN ≠ 0000). This will start the warm up procedure (default: 3 minutes). All buttons are diabled during warm up period.
- 3. The BSC is ready for work.

Class II Biological Safety Cabinets

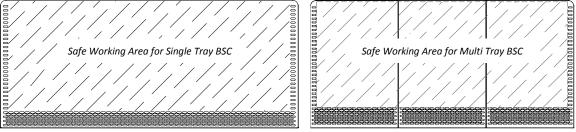

3.2.2 Turning off the BSC

- 1. Turn off the fan by pressing the FAN button. Input the Fan PIN if asked (if PIN ≠ 0000). This will start the post purge procedure (default: 0 minute). All buttons are diabled during post purge period.
- 2. Lower the sash to the fully closed position (the display will show UV MODE). The sash can be lowered immediately after turning off the fan as it will not interrupt the post purge procedure.
- 3. Turn on the UV lamp (when present) to decontaminate the work area by pressing the UV button. Leave the UV lamp on to make sure the decontamination is done effectively. The UV lamp can only be turned on after the post purge procedure is finished.

3.3 Working in the BSC

- Surface-decontaminate the work area (work surface, back and side wall, UV lamp, electrical outlet, service fixture and the inner surface of the sash window) before and after using the BSC.
- Allow the BSC to purge any contaminant by allowing the blower to operate at least 3 minutes before and after using the BSC.
- Surface-decontaminate any item (including your arms) or apparatus with appropriate disinfectant before entering or exiting the work area.
- Place the waste container (containment bag, pippete discard pans, etc.) inside the BSC work area.
- Place all items and apparatus in the safe working area.

- Minimize room activity (personnel movements, closing and opening of doors, etc.) since these external airflow disturbances may adversely affect the BSC's internal airflow, thereby possibly impairing the containment capabilities of the BSC.
- Ensure that the sash is at normal operating height (READY state) before starting any experiment.
- Ensure the front and back air grilles are not obstructed by your arms or any other objects.
- Work as far inside the BSC as possible at least 150 mm (6 inches) behind the front air intake grille.
- While working in the BSC, move your hands slowly and in a controlled manner. Rapid movements may disrupt the air barrier, allowing contaminants to escape or enter the BSC.
- The use of Bunsen burner inside the work zone is not recommended. However if the use of Bunsen burner is unavoidable, place the burner in the right side of the work zone.
- Place aerosol-generating instruments as far inside the BSC as possible and at least 150 mm (6 inches) from clean items/materials.
- Place air turbulence generating equipment such as centrifuges, blenders or sonicators towards the back of the BSC. Stop other work while any of this equipment is in operation.
- As far as possible, it is recommended that the BSC be operated continuously in order to achieve optimal containment and cleanliness. Airflow studies have shown that once the fan has been switched off, air from the BSC may escape due to the thermal currents from inside the BSC.

3.4 Working Ergonomics

On most occasions, you would most likely be operating the BSC in sitting rather than standing posture. There are some obvious advantages of the sitting posture:

- The physiological energy cost and fatigue involved in sitting are relatively less
- Sitting posture provides the body with a stable support
- However, sitting position has some drawbacks too:
 - The working area available is fairly limited

- There is a potential risk of being constrained in the same posture for a long time
- Sitting posture is one of the most stressful postures for one's back

Therefore you should pay careful attention to the following guidelines in order to achieve comfortable and healthy working conditions:

- Always ensure that your legs have enough legroom.
- Keep your lower back comfortably supported by your chair. Adjust the chair or use a pillow behind • your back whenever necessary.
- You should place your feet flat on the floor or on a footrest. Don't dangle your feet and compress your thighs.
- You should keep varying your sitting position throughout the day at regular intervals so that you are never in the same posture for too long.
- Observe the following precautions with respect to your eyes:
 - Give your eyes frequent breaks. Periodically look away from the work area and focus at a 0 distant point.
 - 0 Keep your glasses clean.
- Arrange the items/apparatus frequently used in your work in such a way that you can minimize the physical strain involved in handling them.
- Exercise regularly

The BSC's noise emission has been tested and found to be in compliance with EN 12469, ISO 4871 and NSF/ANSI 49 which is important to ensure health and comfort for the operator.

Ergonomics accessories available with Esco include:

- Armrest padding •
- Lab chair
- Footrest

Please contact your local distributor or Esco for more information.

3.5 UV Lamps

The UV light is a germicide and virucide. Even at the minimum acceptable irradiance in a BSC – 40 μ W/cm² (US Department of Health and Human Services et. al., 2000), it would only take 12.5 minutes to reach 30,000 μ W/cm2 (1 W = 1 J/sec), which has been listed as germicidal for spore forming organism. Unlike many other type of decontamination agent, UV light doesn't leave any residue. The decontamination action stops upon de-energizing of the lamp.

However, due to the short wavelength, the UV light does not penetrate well. Thus UV light can only be used to effectively disinfect the work area of an empty BSC. For any container stored inside the BSC's work area, the UV radiation will only disinfect the outer surface of the material, leaving the inner surface and the content inside the material untouched.

- UV light decontamination method may be used before and after working with vegetative organisms and viruses. However, it should not be the sole decontamination agent; the use of chemical decontamination agent is still encouraged.
- Minimize the material inside the BSC's work area during the process of UV light decontamination. A direct interaction with UV light can degenerate plastic- or rubber-based material and can cause other hazard.
- Make sure that the BSC sash is in the fully closed position and the interlock is working properly before activating the UV lamp. Avoid direct contact with skin and eyes as UV light is classified as a probable human carcinogen.
- The UV lamp should be activated for around 60 minutes to work effectively. Use the UV timer feature to easily control the period of decontamination (UV timer is disabled by default). Leaving the UV lamp on for over 60 minutes or even overnight is not recommended because it shortens the lifespan of the lamp. The UV lamps used in Esco BSC have a lifespan of 2,000 hours.

- The UV lamp should be cleaned of any dust and dirt weekly and changed annually to ensure its effectiveness.
- The use of UV lamp in BSC has been explicitly discouraged in all major international standards and recommendations.

3.6 Decontamination and Disinfecting Agents

- For stainless steel surfaces, all common disinfecting agents except chlorine-based ones are suitable.
- For powder coated surfaces, all common disinfecting agents are suitable. However, the BSC has been specifically evaluated for use with the following:
 - 1N hydrochloric acid
 - 1N sodium hydroxide
 - o 1% quaternary ammonium compound
 - o 5% formaldehyde
 - o 5,000 ppm hypochlorite
 - o 2% iodophor
 - o 5% phenol
 - o 70% ethyl alcohol
- Depending on the contaminant involved at the time of operating the BSC, there are various other types of disinfecting agents that may be used. The following table outlines the effectiveness of various disinfecting agents against the different types of contaminants.

usinect	ing agents a	gainst the u	шегент туре		iniants.			
Decontaminant	Glutaral- dehyde	Peroxide/ Paracetic acid/ Acetic acid	Chlorine Dioxide	Chlorine	lodophor	Alcohol	Phenolic	Quaternary Ammonium Compounds

(1) protected from light and air

+ = effective, +/- = results may vary, blank = not effective

Decontamination

Decontamination may frequently be carried out by means of formaldehyde fumigation or using other decontamination agents, such as chlorine dioxide or hydrogen peroxide. Decontamination process should only be carried out by trained personnel.

In any of the following eventualities, the user should ensure that the BSC has been properly decontaminated, keeping in mind the nature of the pathogens used:

- At the time of moving/relocating the BSC
- At the time of changing the type of work being carried out in the BSC
- Before accessing contaminated areas for servicing, for example filter replacement

9

10

4.1 Scheduled Maintenance

Proper and timely maintenance is crucial for trouble free functioning of any device and your Esco BSC is no exception to this rule. We strongly recommend that you follow the maintenance schedule suggested hereunder in order to obtain optimal performance from your Esco BSC.

NI-	Description of Task to Perform	Maintenance to be carried out every						
No.		Day	Week	Month	Quarter	1 Year	2 Years	
1	Surface decontaminate the work zone	v						
2	BSC power-up alarm verification	V						
3	Thoroughly surface decontaminate the drain pan		V					
4	Check the paper catch for retained materials		V					
5	Clean the exterior surfaces of the BSC			V				
6	Clean the sash window			V				
7	Check all service fixtures (where present) for proper operation			V				
8	Inspect the BSC for any physical abnormalities or malfunction				V			
9	Clean up stainless steel surfaces with MEK				v			
10	Re-certification					V		
11	Change UV Lamp (where present)					V		
12	Change the fluorescent lamps						V	

Cleaning the BSC

- Clean the work surface and walls with appropriate disinfectant agent and soap water afterward •
- Clean the sash window using an appropriate disinfectant agent and glass cleaner afterward •
- Use a damp cloth to clean the exterior surface of the BSC, particularly on the front and top in order to • remove dust that accumulated there
- Use clean water to finish the cleaning and wash away any residue of disinfectant agent, soap water • and glass cleaner
- For removing stubborn stains or spots on the stainless steel surface, make use of MEK (Methyl-Ethyl-• Ketone). In such cases, make sure that you wash the steel surface immediately afterwards with clean water and some liquid detergent. Use a polyurethane cloth or sponge for washing. Regularly cleaning the stainless steel surface can help you retain the attractive factory finish.

Test the audible and visual alarm

The simplest method by far would be to move the sash until the glass window is no longer in the sash ready or UV mode position.

Check the cabinet's functionality

- Check the BSC's mechanical functionality; ex: sash window lubricate if necessary
- Check the BSC's electrical functionality; ex: fluorescent lamp replace if necessary
- Check the BSC for any defect, repair immediately

Re-certification

All BSC must be re-certified annually by a certified engineer. See test report for recertification procedure.

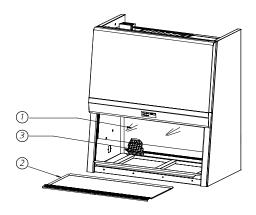

Accessing the paper catch

The purpose of accessing the paper catch is to remove any retained materials that might cause obstructions. Care must be taken as the area is contaminated.

Before opening the paper catch:

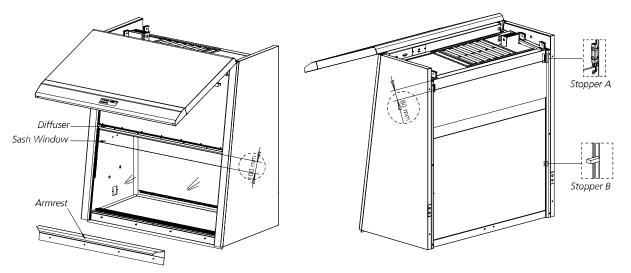

- Use appropriate personal protective equipment (PPE).
- Wipe down the interior of the BSC including the top and bottom surfaces of the work tray(s) while airflow is operating.
- If the interior cannot be wiped down, the BSC should be decontaminated

Accessing the paper catch

- 1. Turn the blower off. Then raise the sash to fully open position for easy access.
- 2. Remove the tray(s) to access the paper catch.
- The figure beside, points to the location of the paper catch. Locate and remove any material trapped. Be careful of any sharp objects that might be present. You might want to use a mirror to help you see better.

Sash cleaning procedure

- 1. Remove armrest
- 2. Lower the sash by continuously until the sash is in the lowest position and create a 10 cm opening between the sash and the diffuser
- 3. Open the front panel.
- 4. Slide your hand through the opening and clean the inner side of the sash using cloth and IPA 70%
- 5. After cleaning, push continuously until the sash is in the sash ready position
- 6. Close the front panel.
- 7. Reattach armrest

4.2 Maintenance/Service Log

It is good practice (and in some cases regulatory requirement) to maintain a log of all maintenance work carried out on your cabinet.

12

APPENDIX

LOG RECORD

Cabinet	:	
Serial Number	:	
Person in Charge	:	

- 1. This log record should be used by the operator to record any new agent/virus/bacteria/germs that has been introduced to the cabinet during its operation, problems encountered, etc.
- 2. Any decontamination procedure performed by either the user or the technician should be recorded down as well.
- 3. Please also record any major maintenance procedure performed by the service technician, for example: parts replacement, recertification, etc.
