1.0 Introduction

The DX series is a digital loudspeaker management system designed for the touring or fixed sound installation markets. The absolute latest in available technology is utilized with 32-bit (40-bit floating point) processors and high performance 24-bit Analog Converters. The high-bit DSP prevents noise and distortion induced by truncation errors of the commonly used 24-bit fixed-point devices. A complete set of parameters include I/O levels, delay, polarity, 6 bands of parametric EQ per channel, multiple crossover selections and full function limiters. Precise frequency control is achieved with its 1 Hz resolution. Inputs and outputs can be routed in multiple configurations to meet any requirement. The DX series can be controlled or configured in real time on the front panel or with the intuitive PC GUI accessed via the USB or RS485. Software upgrade for CPU and DSP via PC keeps the device current with newly developed algorithms and functions once available. Multiple setup storage and system security complete this professional package.

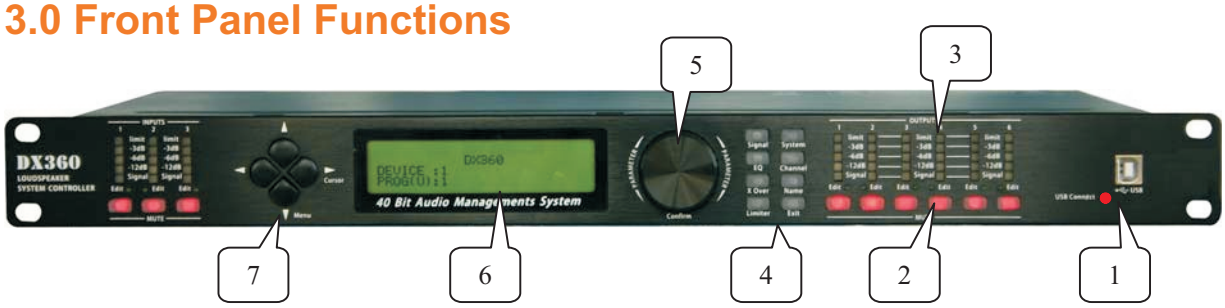
3.0 Front Panel Functions



1. **USB** – a standard Type B USB connector. Proper device driver must be installed prior to usage. The red LED will come ON for indicating USB cable connected

2. **Mute keys (Edit Mode)** – Mute/Unmute input and output channels. When an input/output channel is muted, a red LED will come ON for indication. When **Mute** key is pressed for 1 second, it selects the corresponding channel for Editing, the LCD menu display the editing channel and is acknowledged by a green LED above the button's. The last modified menu will be displayed on the LCD. While the Mute key (Editing green light ON) is hold down, multiple channels can be linked or unlinked by pushing the desired channels. This eases programming for same parameters across multiple channels. Multiple Inputs (except Channel 1) can be linked together and multiple outputs can be linked together. Inputs and Outputs are linked separately.

3. **Peak Level LED** - Indicates the current peak level of the Signal: Signal, -12dB, -6dB, -3dB, Over/Limit. The Input **Over** LED references to the device's maximum headroom. The Output **Limit** LED references to the threshold of the limiter.

*the 2nd (-3dB) LED will light up when limiter is functioning
*the 1st (LIMIT) LED will light up if signal is overloaded

4. "One Touch" easy access menu keys - There are 8 menu keys for
*Signal - Gain/POL (Phase) /Delay,
*EQ – PEQ Equalizer,
*X'over (Crossover)
*Limiter – THRESH, ATTACK, RELEASE
*System – Load, Store or Erase programs
*Channel - Input Mix
*Name (Channel name) - for each input/output channel.
*Exit – exit control for main system.

5. **Rotary Thumb Wheel** - Changes parameter data values and press to confirm the changes. The wheel has travel velocity sensing which ease large incremental data modifications according to the speed dialed. To confirm the setting press the wheel one time.

6. **LCD** – 4 line x 32 letters for showing all the necessary information to control the unit.

7. Cursor control- 4 ways Cursor control.

4.0 Rear Panel Functions

1. **Main Power** - Connects via a standard IEC socket. A compatible power cord is supplied with the unit. The voltage input is 110V/240VAC, 50-60Hz.

2. **Main Fuse** - T2.5A-250V. Slow blow type.

3. **Power switch** - Controls power On/Off.

4. **RS485** – Let remote control the device's up to 1000M and connect devices in serial up to 250 sets

5. **XLR input and outputs -** Separate 3-pin XLR connectors are provided for each audio input and output. The device's output stage employs the balanced impedance topology. All I/O conn ectors have pin 1 as ground (shield), pin 2 as + and pin 3 as -.

5.0 Powering Up the Device

- After powering up the unit, the following initialization screen is displayed on the LCD:
- The initialization process takes about 8 seconds and during that period the unit boots and displays the device model and firmware version.
- After the initialization process is finished the DX displays its main screen:
- The screen shows the current program number and program name assigned to the unit. If the 2 fields are empty, it means that no program is assigned, the last data before previous power down is recalled instead.
- Now the DX is ready to operate.

Tips: Channel Linking – While holding down the Mute key for 1 Second and more than 1 channel from the same group (Output group) can be selected to link the channels together. The green LEDs above the **Mute** buttons are lit for the linked channels. Any modification of the data for the selected channel will be applied to the linked channels as well. To cancel the linking, simply deselect the desired channel if the Mute key is still pressed.

6.1 Input/Output menus

Each of DX input channels has a separate Mute key. Hold down the Mute key for 1 second then the Channel Edit menu can be used and the green LEDs above the Mute button are lit.

One Touch easy access setup button
