Acer laptop with 3G Embedded modem: APN Setting Change Guide

This document shows step-by-step how to change the Access Point Name (APN) setting of your Acer laptop with 3G Embedded modem. This enables you to upgrade your **Optus Wireless Broadband** service to an **Optus Business Mobile Broadband** service.

This work instruction is for users of an Acer laptop with a 3G Embedded modem to access the Optus Business Mobile Broadband service. To access the service the APN setting must be changed from "connect" to "yesbusiness".

To change the APN setting on your laptop with a 3G embedded modem please following the steps outlined below:

Step 1: Open the Acer 3G connection manager

Step 2: Select "Show settings"

Step 3: Click inside the APN box and type yesbusiness then select “save”

Step 4: Select “connect”

You have now changed the APN setting on your laptop and will be able to connect to your new Optus Business Mobile Broadband service when ever you browse the Internet using your laptops web browser.

If you encountered any technical difficulties in following the above process please contact Optus Premium Managed Technical Support (PMTS) on 1300 130 765.
