9. Power LED
10. eSATA port for connection to PC
11. eSATA port for connection to PC
12. DC IN for power adapter
13. Power switch

HDD copy instruction:
1. Do not connect USB interface to PC / MAC
2. Pease insert SOURCE hard disk into Slot 1. Any and every file system or content is supported.
3. Please insert DESTINATION hard disk into Slot 2. An empty, unformatted hard disk is recommended.
4. Please power on the unit and wait for about 10 seconds.
5. Press the CLONE button 2 times. The 4 LEDs will start flashing.
6. The copy progress will be displayed by steady shining LEDs at 25%, 50%, 75% and 100%. The copy process is finished if all 4 LEDs are shining steady. Now you can power of the unit and remove both hard disks.

NOTE:
The DESTINATION hard disk has to be same or larger size than the SOUCRE hard disk.
If Disk 2 is larger than Disk 1, e.g. Disk 1 has 250GB and Disk 2 has 750GB, after copy process has finished, there are 500GB unallocated at Disk 2. Please use the partition manager to allocate and format this part of Disk 2. The copy function allows cloning the SOURCE hard disk incl. boot sectors, data partitions or unallocated parts.

One Touch Button Backup Control

The FANTEC MR-CopyDU3 comes with a one touch backup button which will call the PC CloneEX Lite Backup software and instantly do backup file operation based on the settings made before.

HDD backup instruction:

Installation of backup software

Insert the CD and select "Setup.exe", to enter the installation menu.
Click "Install" for next step.
Select the path for installation and click "install".
After the installation is complete, click "ok" to exit.
The icon of PC CloneEX appears on the notify area. Double click the icon or right click to configure the PC CloneEX.
Note: The backup software only working at an USB port of a MS Windows computer.

Usage of backup software - main menu：

1. Fast Backup	2. File backup	3. File management
4. Setup	5. File backup key	6. Assign to the system arrange
7. Info	8. Help	

Fast File Backup

Click the "File Backup" or use the backup key directly, you only need one step and no complicated setup.

Connect the product to the PC and turn on the power.
Implement program PCClone EX Lite.
Enter the menu of Quick Launch.
Select option of File Backup.
Click "OK" once a dialogue box appears and the backup will start.
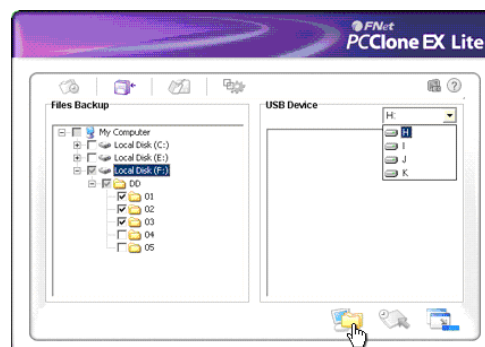

It is also possible to press the backup button to achieve the file backup. One push on the backup button and the file backup dialogue box appears. Press again to start the backup.
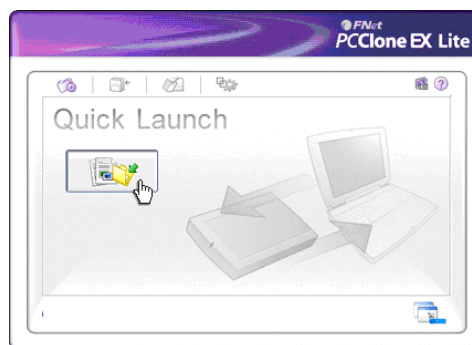

File backup menu

Setup the files for backup and then press the backup button to start (If there were more USB hard disks, you are able to select which one to store the files).
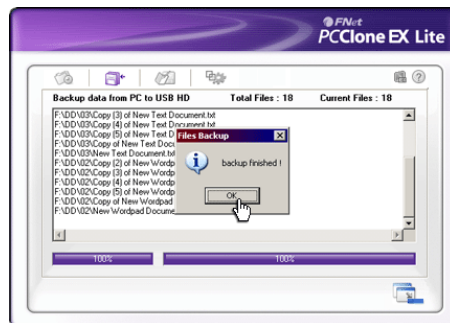

Click" OK" to confirm the backup：
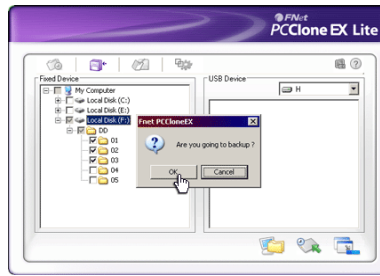

The system prompts the percent of the current progress.

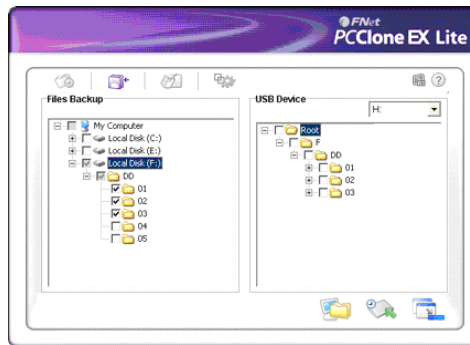

If the Backup is complete click "OK".

The system prompts as follows once the backup is complete.

Files

(PCClone EX completes the backup to the USB HDD)

USB Drive: If there were more than two hard disks connected to the PC, your are able to select which one to store the file.

There is a hidden folder" Fnet" under the root directory of USB disk and the data is stored in this folder. (Please don't delete this folder)

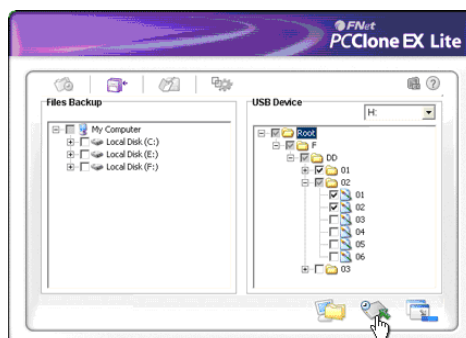

File recover

Connect the disk to the PC and then turn on the power
Enter PCClone EX menu.
Select File Backup option.
Select the target files or folder.

Select "Restore" and then click "OK" to start the recovery.

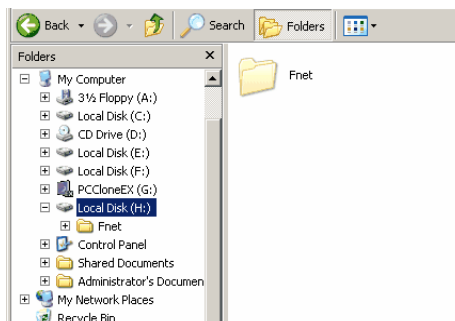

After the recovery is complete click "'OK".

Delete file backup

Enter the menu of File Backup.
Move the cursor to the windows of the USB Device, right click and then click "Delete selected file".

It is also possible to delete the hidden folder "FNet" under the root directory of the USB disk.

File management

The function of the File Manager is similar to the file management under Windows. It is possible to drag the files or folders between the left and right windows. After recovering the files, you are able to check, move or access the files in a very convenient way.
