CP-X10000 CP-WX11000 CP-SX12000

PROFESSIONAL SERIES INSTALLATION PROJECTORS

Uncompromising quality, flexibility of installation and extended product life are features on offer with our Professional Series Installation Projectors. Life of the product is extended considerably with virtually maintenance free inorganic LCD panels and polarizer filters. A wide lens shift and a wide variety of optional lenses provide greater range of movement and projection distances. This series also boasts superb quality with an impressive contrast ratio of 2500:1 (with Iris), a 10-bit digital signal processor and a high quality scaler chip on board.

Already renowned for its reliability, Hitachi unveils its most reliable and flexible Professional Series Installation Projector yet.

Reliability

High Performance Filter

Each of the Professional Series Installation Projectors features a highly efficient dust-resistant cooling system. This dramatically boosts reliability, resulting in an air filter that delivers over 10,000 maintenance-free hours. With its long-life and easy maintenance enhancements, this projector is ideal for use in retail, digital signage and other environments where the projector is in constant use.

Easy Replacement

Easy side and rear access to key components simplifies maintenance when replacements are necessary.

A side access panel allows for quick and easy filter replacement.

Performance

Heightened Picture Quality

Digital processing of the video signal is 10-bit from input to output, allowing smooth and natural graduations with 1024 shades of each RGB colour. In total, each model can create 1,074 billion colours. Additionally, with its on-board high performance chip and 2500:1 contrast ratio, picture quality is boosted even further.

Inorganic LCD Panels

Each model utilises three inorganic LCD panels that offer more resistance to light. This translates to longer operating life and enables installation of a stronger light source, achieving a greater level of brightness. Double speed drive coupled with LCD panels not only offers improved picture quality, but higher contrast as well.

Connectivity

Every conceivable connectivity option is covered with 2 x 15-pin Mini-D-sub, 1 x BNC (shared with component), 1 x DVI-D, 1 x HDMI (Digital RGB) as well as an RJ-45 network socket.

Installation

Wider lens shift

With Hitachi's lens shift technology, the image range of movement grows even wider. The projector can cover a total range of 2.7 screen areas vertically and 2.2 screen areas horizontally (it can shift up or down by 85% of the screen's height, and left or right by 60% of the screen's width). In auditoriums and convention halls with stationary screens, the projector can now be placed freely among any number of possible locations.

Brightness

The CP-X10000 projects at an impressive 7500 ANSI Lumens, providing sufficient performance in a variety of settings regardless of size or brightness.

Vertical projection

Images can be projected at 90 degrees up and down, opening up a whole new range of possible applications.

*If other lenses are used, Hitachi cannot guarantee 100% compatibility with the specification

Other Features

Mechanical shutter

The shutter mechanically blocks off light, acting as a valuable tool for any presentations.

Remote control with ID change function

The accompanying remote control comes with four ID buttons. When operating multiple projectors, each ID can be changed, preventing malfunction. In addition, focus, zoom and lens shift can be adjusted via the remote control.

OSD Menu design

All models feature a new OSD menu with an intuitive interface and sophisticated design. Various functions are easily differentiated by icons, and a horizontal slide bar makes for easy operation.

Security

Each projector is equipped with a security bar that allows easy attachment of a security chain. In addition, all three models incorporate convenience, security and connectivity options including MyScreen, My Memory, My Button, resolution presets, blackboard whiteboard and daytime modes. MyScreen PIN-Lock, Kensington slot, transition detector and a security LED assist security.

Network Bridge function RS-232C

The Network Bridge function allows for commands to be transmitted via its LAN port to another device connected to the RS-232C output, such as an external TV Tuner or control panel. Not only does this simplify and reduce cabling and installation costs, but having individual RS-232C inputs and outputs allows you to daisy chain multiple Professional Series Installation Projectors together.
