1. Introduction

The Wireless Subscriber Gateway is deployed in a Wireless broadband service network for high-speed access the Internet. The Wireless Subscriber Gateway can immediately recognize new users on the network (and remember returning users) and redirect their browser to a proprietary Web page. That is to say, user needn't change their network configuration to access the Internet, just plug and play.

The product is a freestanding or wall-mounted unit with five Ethernet ports (WAN and LAN), a serial port for external device application. After the initial setup and network configuration is established, a network administrator through a Web management interface easily manages the product.

The two models to provide a variety of access numbers at same time to accommodate different needs of customers:

- 20 access account
- 100 access account

1-1 Package Contents

Please inspect your package. The following items should be included:

- One Wireless Subscriber Gateway
- Two antennas
- One AC Power Adapter for Wireless Subscriber Gateway
- One CD containing user's manual, installation guide
- Two screws for wall-mount
- One UTP Ethernet/Fast Ethernet cable (Cat.5 Twisted-pair)
- One Mini Account Generator Printer
- One AC Power Adapter for mini account generator printer
- One RJ-11 to DB25 male connector cable (1.8m)

If any of the above items are damaged or missing, please contact your dealer immediately.

1-2 Features

Plug and Play - Support All Network Configurations

The Wireless Subscriber Gateway provides instant Internet access by using your own notebook PC without the hassle of configuration setting. This innovative sophisticated design enables instant Internet access wherever traveling may take you. Easy to use plug-and-play access to broadband networks.

Note:

The "PnP" Function only can be used with TCP/IP-based Network.

Seamless Email Handling with Email Server (SMTP) Redirection

The Wireless Subscriber Gateway will redirect subscriber's original message of E-mail according to SMTP rules and sent it out via the specified SMTP server. This function could help subscribers to send E-mail via the local SMTP server when their default SMTP server is out of work or don't allow connecting from Internet.

Remote Configuration

The administrator can access this system by using web browsers such as Netscape Navigator or Microsoft Internet Explorer. This system allows a remote user to view and/or modify system configuration via Internet.

HTTP Proxy Support

Supports common proxies acting as a proxy server. This function could help subscribers without changing proxy settings to eliminate support calls related to client proxy settings.

Home Page Redirection

The Wireless Subscriber Gateway enables solutions providers to redirect subscribers to a portal web site of their choice. This allows the solution provider to generate online advertising revenues and increase business exposure.

Support VPN (Virtual Private Network)

The Wireless Subscriber Gateway can allow subscriber to create VPN networks using the Internet as the medium for transporting data.

V-LAN

The Wireless Subscriber Gateway can avoid sharing data within the wireless or wired LAN group. That is the best solution for HotSpot security. Nobody will allow his computer's data to be shared to anyone else. We can also provide Port-Based V-LAN via our equipped four 10/100Mbps auto-negotiating Ethernet ports.

Secure HTML Login Page (SSL)

We use Secure HTML Login Page through SSL to protect username and password while LAN users login. That enables security authentication within the network.

WEP Data Encryption

WEP (Wireless Equivalent Privacy) ensures the wireless data security and help prevent unauthorized access. We support 64bit, 128bit and 256bit.

Watchdog

The feature enables the Wireless Subscriber Gateway to keep working by resetting system itself once the device crash down.

Built-in Accounting/Authentication System

Provides **No-backend-RADIUS-server** Internet Service Provider to have Integrated Solution for rapid deployment.

1-3 Precautions

- Never remove or open the cover. You may suffer serious injury if you touch these parts.
- Never install the system in the wet locations.
- Use only the original fitting AC power adapter otherwise there is a danger of severe electrical shock.
- Avoid exposing the Wireless Subscriber Gateway to direct sunlight or another heat source.
- Choose a well-ventilated area to position your Wireless Subscriber Gateway.

1-4 Outlook

Figure 1-1 Wireless Subscriber Gateway Outlook

1-4-1 Top Panel

The top panel of the Wireless Subscriber Gateway is shown below.

Figure 1-2 Wireless Subscriber Gateway Top Panel

LEDs Indication

LED	State	Description
Power	Off	The Wireless Subscriber Gateway is not receiving electrical power.
	Green	The Wireless Subscriber Gateway is receiving electrical power.
WAN	Green	The WAN port is used to connect your xDSL or Cable modem.
	Green (Blinking)	Data is in transmitting and receiving on WAN port.
LAN (1-4)	Green	A port has established a valid 10/100Mbps network connection.
	Green (Blinking)	10/100Mbps traffic is traversing the port.
	Off	Port has not established any network connection.
Wireless	Green	The Wireless Subscriber Gateway has established a valid wireless connection.
	Green (Blinking)	The Wireless connection is active.
Status	Off	The Wireless Subscriber Gateway status is defective.
	Green	The Wireless Subscriber Gateway status is complete.
	Green (Blinking)	During firmware upgrades, this status LED will blink.

1-4-2 Rear Panel

The rear panel of the Wireless Subscriber Gateway is shown below.

Figure 1-3 Wireless Subscriber Gateway Rear Panel

1. Power Jack:

Used to connect the external power supply with the Wireless Subscriber Gateway device.

2. LAN Port:

The rear panel supports four auto-sensing RJ-45 ports and all ports can be auto-switched to MDI-II connections. The LAN ports used for linking hosts or other networking device. The individual port can be either connected to 100BaseTX networks or 10BaseT networks. When connecting to a 100BaseTX network, the ports operate at 100Mbps in half-duplex mode or 200Mbps in full-duplex mode. When connecting to a 10BaseT network, the ports operate at 10Mbps in half-duplex mode or 20Mbps in full-duplex mode.

3. WAN Port:

One Ethernet port used for linking xDSL or Cable Mode

4. Device Port

Used to connect the Mini Account Generator Printer.

1-4-3 Left Side Panel

The left side panel of the Wireless Subscriber Gateway is shown below.

Figure 1-4 Wireless Subscriber Gateway Left Side Panel

1. Reset Button:

The Wireless Subscriber Gateway has a reset button at the left side panel of the device. For some circumstances you might need to reset the Wireless Subscriber Gateway device.

1-5-2 Software Specifications

Plug and Play Internet Access

This function can accommodate all network configuration, including DHCP, DNS, HTTP Proxy and dynamic and static IP address assignments. That is, whenever a subscriber login, the Wireless Subscriber Gateway automatically translates their computer's network settings to provide them with seamless access to the broadband network. Subscribers no longer need to alter their computer network configuration settings.

Note:

The "PnP" Function only can be used with TCP/IP-based Network.

Seamless Email Handling with Email Server (SMTP) Redirection

The Wireless Subscriber Gateway will redirect subscriber's original message of E-mail according to SMTP rules and sent it out via the specified SMTP server. This function could help subscribers to send E-mail via the local SMTP server when their default SMTP server is out of work or don't allow connecting from Internet.

DHCP Function

The Wireless Subscriber Gateway will follow RFC2131 that is designed to supply dynamic IP addresses.

HTTP Proxy Support

Supports common proxies acting as a proxy server. This function could help subscribers without changing proxy settings to eliminate support calls related to client proxy settings.

Various WAN Connections

The Wireless Subscriber Gateway provides alternative WAN connection such like PPPoE, PPTP Client, DHCP Client or Static IP for service provider to establish their service networking.

Support VPN (Virtual Private Network)

The Wireless Subscriber Gateway can allow subscriber to create VPN networks using the Internet as the medium for transporting data.

V-LAN

The Wireless Subscriber Gateway can avoid sharing data within the wireless or wired LAN group. That is the best solution for HotSpot security.

Built-in Simple Authentication and Accounting System

The Wireless Subscriber Gateway provides simple authentication and accounting system.

Support VPN (Virtual Private Network) Pass through

VPN PPTP / IPsec pass through provides users who want to run his VPN or secure tunneling client software to connect to his company VPN Server via Wireless Subscriber Gateway.

WEP Data Encryption

WEP (Wireless Equivalent Privacy) ensures the wireless data security and help prevent unauthorized access. We support 64bit and 128bit and 256bit.

Remote Browser-based Configuration and management

The administrator can access this system by using web browsers such as Netscape Navigator or Microsoft Internet Explorer. This system allows a remote user to view and/or modify system configuration via Internet.

Watchdog

The feature enables the Wireless Subscriber Gateway to keep working by resetting system itself once the device crash down.

Syslog

This function allow network administrator to monitor the usage status of subscribers from remote site. Administrator could set up a syslog server to receive the log that consist of Current logged-in subscribers information send by Wireless Subscriber Gateway within interval time.

2. Installation

The followings are instructions for setting up the Wireless Subscriber Gateway. Refer to the illustration and follow the simple steps below to quickly install your Wireless Subscriber Gateway.

2-1 Wall-Mounting

The Wireless Subscriber Gateway can be wall-mounted on a wall by applying the two mounting brackets on screws.

Figure 2-1 Wall-Mounting Bracket - Bottom of Wireless Subscriber Gateway

Please refer to the following instructions for mounting a Wireless Subscriber Gateway on a wall or other surface.

1. Install two screws on a wall according to the relative positions shown below.

Figure 2-2

2. Hang Wireless Subscriber Gateway on the wall by sliding the two screws in the mounting brackets.

Note: If the screws are not properly anchored, the strain of the cables connected to the Wireless Subscriber Gateway rear panel connectors could pull out the Wireless Subscriber Gateway from the wall.

2-2 Connecting the antennas

The Wireless Subscriber Gateway provides two antenna connectors on the rear of the unit.

Figure 2-3 Antenna Connectors

2-3 Installation Requirements

Before installing the Wireless Subscriber Gateway, make sure your network meets the following requirements.

System Requirements

The Wireless Subscriber Gateway requires one of the following types of software:

- Windows 95/98/NT/2000/XP
- Any TCP/IP-enabled systems like Mac OS and UNIX (TCP/IP protocol installed)
- Standard phone line for xDSL modem
or
Coaxial cable for Cable modem
- Web Browser Software (Microsoft I.E 4.0 or later version or Netscape Navigator 5.0 or later version)
- One computer with an installed 10Mbps, 100Mbps or 10/100Mbps Ethernet card
- UTP network Cable with a RJ-45 connection (Package contents)

Note: Prepare twisted-pair cables with RJ-45 plugs. Use Cat.5 cable for all connections. Make sure each cable not exceed 328 feet (Approximately 100 meters).

ISP Requirements

Verify whether your ISP use fixed or dynamic IP. If it is a fixed IP, be sure to get the IP from your ISP. For dynamic IP, which is mostly used, the PC will get the IP automatically whenever it hooks up on the modem.

Dynamic IP

- Dynamic IP Setting

Fixed IP

- Your fixed IP address for the Wireless Subscriber Gateway
- Your subnet mask for the Wireless Subscriber Gateway
- Your default gateway IP address
- Your DNS IP address

PPPoE

- Your user name from your ISP
- Your password from your ISP

PPTP

- PPTP Server IP Address from your ISP
- PPTP Local IP address from your ISP.
- PPTP Local IP subnet mask from your ISP.
- Your user name from your ISP
- Your password from your ISP

Your PC Requirements**The Static IP settings for the PC**

- Your PC's fixed IP address
 - Your PC's subnet mask
 - Your PC's default gateway IP address
 - Your PC's primary DNS IP address
-
-

Note:

1. The gateway's default IP address setting is "10.59.1.1".
 2. The gateway's default subnet mask setting is "255.0.0.0".
-

The Dynamic IP settings for the PC

We recommend that you leave your IP settings as automatically assigned. By default, the Wireless PnP Subscriber Gateway is a DHCP server, and it will give your PC the necessary IP settings.

2-3 Getting Start

1. Place the Wireless Subscriber Gateway and Mini account generator printer on a flat work surface.
2. Connect the DB-25 connector of printer cable into the device port on the rear of the Wireless Subscriber Gateway.
3. Plug the other end of the printer cable into the RJ11 port of the mini account generator printer. Check that the mini account generator printer status LED lights.
4. Ensure that your modem and computer are both switched on.
5. Use the supplied cable to connect the Wireless Subscriber Gateway's WAN port to the modem. Check that the Cable/xDSL Status LED lights.
6. Connect your computer to one of the 10/100 LAN ports on the Wireless Subscriber Gateway. Check that the LAN Port Status LED lights.
7. Configure the further parameters via a web browser.

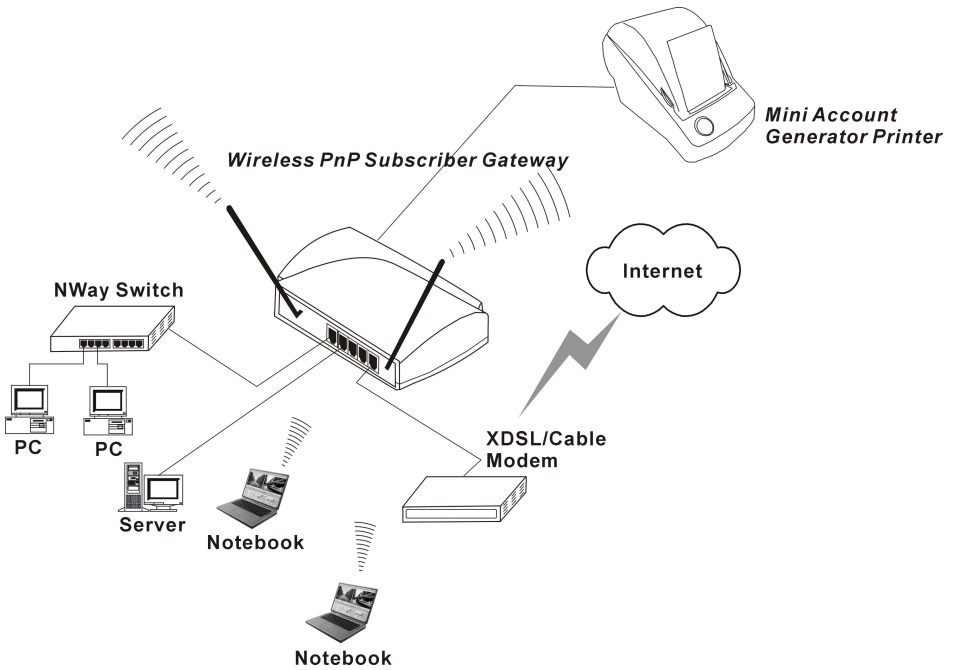

Figure 2-1 Wireless Subscriber Gateway Connection

3. Configuring the Wireless PnP Subscriber Gateway

3-1 Setting Wizard

Step 1: Start your browser, and then enter the factory default IP address **10.59.1.1** in your browser's location box. Press Enter.

Figure 3-1 Web Browser Location Field (Factory Default)

Step 2: The Wireless Subscriber Gateway configuration tools menu will appear. In the Username and Password field, type the factory default user name (**admin**) and password (**admin**). If you want to setup the device quickly, select **Setting Wizard** and click **Get Started** button; otherwise, select **Advanced Setup** for special configuration settings and click **Get Started** button.

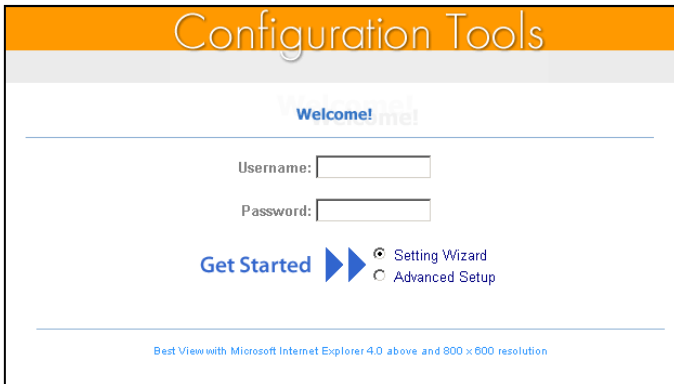

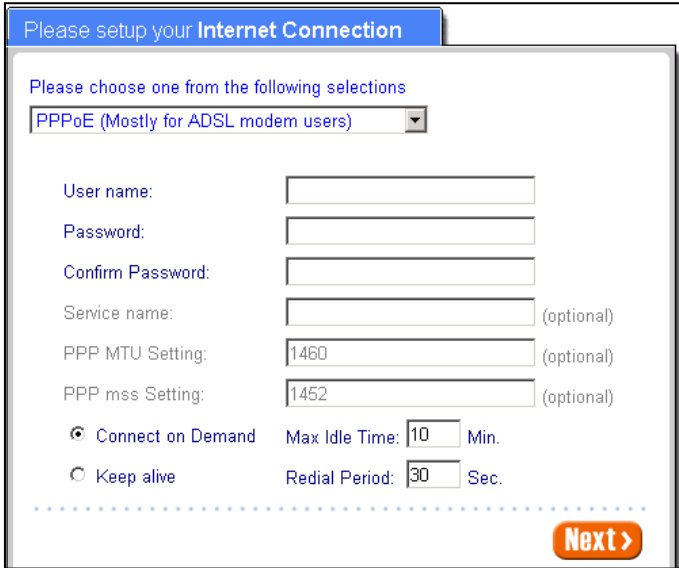

Figure 3-2 Setup Wizard Screen

Note:

- ☞ If you would like to change the password please see Step 9.
- ☞ Username and Password can consist of up to 20 alphanumeric characters and are case sensitive.
- ☞ If for some reason your password is lost or you cannot gain access to the Wireless PnP Subscriber Gateway Configuration Program, please press the reset button to load the device to manufacturer defaults.
- ☞ If the Wireless Subscriber Gateway doesn't send packet in 20 minutes, the Wireless Subscriber Gateway wills logout automatically.
- ☞ Proxy needs to set disable first when administrator accesses admin UI.

Step 3: Internet Connection Setting

Please setup your **Internet Connection**

Please choose one from the following selections

PPPoE (Mostly for ADSL modem users) ▼

User name:

Password:

Confirm Password:

Service name: (optional)

PPP MTU Setting: (optional)

PPP mss Setting: (optional)

Connect on Demand Max Idle Time: Min.

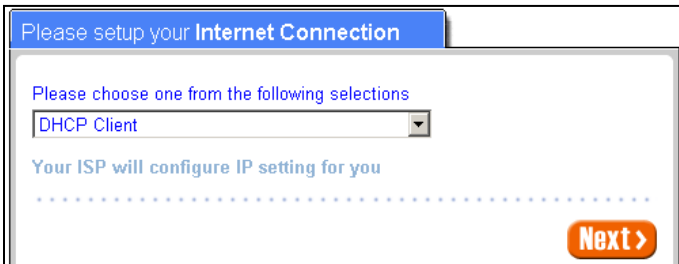

Keep alive Redial Period: Sec.

Next >

Figure 3-3 Internet Connection Setting Screen

● DHCP Client

The device can work as a DHCP client. This allows the device to obtain the IP address and other TCP/IP settings from your ISP. If your xDSL/Cable comes with this feature, please enable Use DHCP Client.

Please setup your **Internet Connection**

Please choose one from the following selections

DHCP Client ▼

Your ISP will configure IP setting for you

Next >

● **Static IP Setting**

Figure 3-5 Internet Connection Setting Screen—Static IP Setting

Item	Description
IP Address	An IP address for the xDSL/Cable connection (provided by your ISP)
Subnet Mask	An IP address (provided by your ISP)
Default IP Gateway	The default IP Gateway address for the xDSL/Cable connection (provided by your ISP).
Primary DNS Server	A primary DNS server IP address for the xDSL/Cable connection (provided by your ISP).
Secondary DNS Server	A secondary DNS server IP address for the xDSL/Cable connection (provided by your ISP). If the primary DNS Server IP were not available, meanwhile, Secondary DNS Server IP would start in the same time.

● PPPoE

Figure 3-6 Internet Connection Setting Screen—PPPoE Setting

Item	Default	Description
User Name	Empty	The user name of your ISP account. The user name can consist of up to 80 alphanumeric characters and is case sensitive.
Password	Empty	The user password of your ISP account. The password can consist of up to 80 alphanumeric characters and is case sensitive.
Service name	Empty	Your ISP will provide the service name.
PPP MTU Setting	1460	MTU (Maximum Transfer Unit) specifies maximum transmission unit size.
PPP mss Setting	1452	MSS (Maximum Segment Size) specifies maximum segment size.

Item	Default	Description
Connect on Demand and Max Idle Time		
Connect on Demand	Enable	You can configure your Wireless Subscriber Gateway to cut your connection with your ISP after a specified period of time (Max Idle Time). If you have been disconnected due to inactivity, Connect on Demand enables your Wireless Subscriber Gateway to automatically re-establish your connection as soon as you attempt to access the Internet again. If you wish to activate Connect on Demand, click the radio button. If you want your Internet connection to remain, click the radio button of keep alive. The Max Idle Tim maximum value is 65535 minutes.
Max Idle Tim	10 Minutes	
Keep alive and Redial Period		
Keep alive	Disable	This option keeps your PPPoE enabled Internet access connected indefinitely, even when it sits idle. The Redial Period maximum value is 65535 seconds.
Redial Period	30 Seconds

Item	Default	Description
PPTP Local IP Address	Empty	A PPTP local IP address for the xDSL/Cable connection (provided by your ISP).
PPTP Local Subnet Mask	Empty	A PPTP local IP address for the xDSL/Cable connection (provided by your ISP).
PPTP Server IP Address	Empty	A PPTP server IP address for the xDSL/Cable connection (provided by your ISP).
User name	Empty	The user name of your ISP account. The user name can consist of up to 80 alphanumeric characters and is case sensitive.
Password	Empty	The user password of your ISP account. The password can consist of up to 80 alphanumeric characters and is case sensitive.
Connection ID/Name	Empty	Connection ID or connection name.
PPP MTU Setting	1460	MTU (Maximum Transfer Unit) specifies maximum transmission unit size.
PPP mss Setting	1420	MSS (Maximum Segment Size) specifies maximum segment size.
Connect on Demand and Max Idle Time		
Connect on Demand	Enable	You can configure your Wireless Subscriber Gateway to cut your connection with your ISP after a specified period of time (Max Idle Time). If you have been disconnected due to inactivity, Connect on Demand enables your Wireless Subscriber Gateway to automatically re-establish your connection as soon as you attempt to access the Internet again. If you wish to activate Connect on Demand, click the radio button. If you want your Internet connection to remain, click the radio button of keep alive. The Max Idle Tim maximum value is 65535 minutes.
Max Idle Tim	10 Minutes	
Keep alive and Redial Period		
Keep alive	Disable	This option keeps your PPTP enabled Internet access connected indefinitely, even when it sits idle. The Redial Period maximum value is 65535 seconds.

Step 4: Wireless Setting

This page allows you to define ESSID, Channel ID and WEP encryption for wireless connection.

Figure 3-8 Wireless Setting Screen

Item	Default	Description
ESSID	Wireless	The ESSID is the unique name that is shared among all points in a wireless network. It is case sensitive and must not exceed 32 characters.
Channel	1	The channel ID for wireless connection.
WEP Key	Disable	Disables or set the use of the WEP algorithm. Enabling the security can protect your data while it is transferred from one station to another. The Wireless Subscriber Gateway supports 64-bit, 128 bit or 256 bit WEP encryption. Enter 5 characters for ASCII 64-bit WEP Key. Enter 13 characters for ASCII 128-bit WEP Key. Enter 29 characters for ASCII 256-bit WEP Key.

Step 5: E-mail Server Setting

Wireless Subscriber Gateway allows an extra Email server parameter to forward the subscriber's E-mail.

Please setup your **E-mail Service**

Do you provide E-mail server for SMTP Redirect Service ?

Yes, I allow guests to send e-mail as usual even if their configured mail server is unavailable or behind a corporate firewall

Please enter E-mail (SMTP) server's IP address or Domain name

No

< Back **Next >**

Figure 3-9 E-mail Service Setting Screen

Item	Default	Description
Email Server Redirect	Yes	Disables or enables email server redirect function. To prevent some subscriber's original Email server may protect by firewall or NAT network. Wireless Subscriber Gateway provides an extra Email server parameter to forward the subscriber's Email. The Wireless Subscriber Gateway not only forwards the subscribers' E-mail via other E-mail server but also changes the SMTP header. The recipient of your E-mail sees the message as if you sent it from your local Internet Service Provide, not form the hotel or other place.
Email Server IP address or Domain name	Empty	Before setting this field, please make sure the E-mail sever relay function is opened. It must not exceed 50 characters.

Step 6: Authentication Service Setting

Please setup your **Authentication Service**

Do you need to authenticate users ?

Yes, The users need to be authenticated before access Internet

No, The users can access Internet without authentication

< Back **Next >**

Figure 3-10 Authentication Service Setting Screen

Step 7: Printer Setting

There are two different choices, one is exclusive printer, and the other is non-exclusive printer. Exclusive printer is a portable thermal printer that is integrated with Wireless Subscriber Gateway to press one button to generate accounts and receipt immediately without PC operating. Non-exclusive printer can use the PC Web-based browser to print out user account.

Please setup your **Account Generator**

Do you have "Exclusive Printer" connected ?

Yes
I can use the button on the **exclusive printer** to create account and print out the account information without PC operating

No
I can use the **PC web-based browser** to create account and print out the account information with PC-connected printer

< Back **Next >**

Figure 3-11 Printer Setting Screen

Step 8: Account Generator

● **Exclusive Printer**

Please setup your **Account Generator**

Accounting Setting for Exclusive Printer

Figure 3-19 Account List

Note:

1. Delete: To delete an existing user account.
2. The maximum user account entry is 512.

Step 9: System Setting

In the Username and Password field, type the factory default user name (**admin**) and password (**admin**). Click **Apply and Restart** button.

Please setup your **System Setting**

Please be sure to change your password:

Username:

Password: Confirm:

Please set system date and time:

Date: 2002/01/01 Time: 14:28:31

Allow remote management from Anywhere

Figure 3-20 System Setting Screen

Item	Default	Description
Username	admin	The user name of administrator. The user name can consist of up to 80 alphanumeric characters and is case sensitive.
Password	admin	The user password of administrator. The password can consist of up to 80 alphanumeric characters and is case sensitive.
Confirm		The password of administrator for confirmation.
System date/time		Define the system date and time.
Allow remote management from	Anywhere	This function allows remote user to management the device.

Note:

☞ After change the settings, please click **Apply and Restart** button to update the new settings and restart the device.

3-2 Advanced Setup

3-2-1 Express Setup

The Express Setup screen enables you to configure basic settings related to accessing the Internet.

Express Setup

Cable/xDSL ISP Setting	<input type="radio"/> DHCP Client (Mostly for Cable modem users or Local Area Network) <input checked="" type="radio"/> Static IP Setting (Mostly for advanced Local Area Network environment) <p style="font-size: small; margin-left: 20px;">Your ISP requires you to input IP setting</p> IP Address: <input style="width: 150px;" type="text" value="192.168.100.91"/> Subnet Mask: <input style="width: 150px;" type="text" value="255.255.255.0"/> Default IP Gateway: <input style="width: 150px;" type="text" value="192.168.100.1"/> Primary DNS Server: <input style="width: 150px;" type="text" value="168.95.1.1"/> Secondary DNS Server: <input style="width: 150px;" type="text"/> <input type="radio"/> PPPoE (Mostly for ADSL modem users) <input type="radio"/> PPTP (Mostly for Europe ADSL modem users)
Wireless	ESSID: <input style="width: 150px;" type="text"/> Channel: <input style="width: 50px;" type="text" value="11"/> WEP: <input checked="" type="radio"/> Disable <input type="radio"/> Mandatory WEP Key Setting

Figure 3-21 Express Setup Screen

Note:

☞ After change the settings, please click **Apply and Restart** button to update the new settings and restart the device.

Cable/xDSL ISP Setting

Express Setup	
Cable/xDSL ISP Setting	<p> <input type="radio"/> DHCP Client (Mostly for Cable modem users or Local Area Network) <input checked="" type="radio"/> Static IP Setting (Mostly for advanced Local Area Network environment) </p> <p>Your ISP requires you to input IP setting</p> <p> IP Address: <input type="text" value="192.168.100.91"/> Subnet Mask: <input type="text" value="255.255.255.0"/> Default IP Gateway: <input type="text" value="192.168.100.1"/> Primary DNS Server: <input type="text" value="168.95.1.1"/> Secondary DNS Server: <input type="text"/> </p> <p> <input type="radio"/> PPPoE (Mostly for ADSL modem users) <input type="radio"/> PPTP (Mostly for Europe ADSL modem users) </p>

Figure 3-22 Cable/xDSL ISP Setting

● DHCP Client

The device can work as a DHCP client. This allows the device to obtain the IP address and other TCP/IP settings from your ISP. If your xDSL/Cable comes with this feature, please enable Use DHCP Client.

<input checked="" type="radio"/> DHCP Client (Mostly for Cable modem users or Local Area Network)
--

● Static IP Setting

<input checked="" type="radio"/> Static IP Setting (Mostly for advanced Local Area Network environment)	
Your ISP requires you to input IP setting	
IP Address:	<input type="text"/>
Subnet Mask:	<input type="text"/>
Default IP Gateway:	<input type="text"/>
Primary DNS Server:	<input type="text"/>
Secondary DNS Server:	<input type="text"/>

Figure 3-24 Static IP Setting Screen

Item	Description
IP Address	An IP address for the xDSL/Cable connection (provided by your ISP)
Subnet Mask	An IP address (provided by your ISP)
Default IP Gateway	The default IP Gateway address for the xDSL/Cable connection (provided by your ISP).
Primary DNS Server	A primary DNS server IP address for the xDSL/Cable connection (provided by your ISP).

Item	Description
Secondary DNS Server	A secondary DNS server IP address for the xDSL/Cable connection (provided by your ISP). If the primary DNS Server IP were not available, meanwhile, Secondary DNS Server IP would start in the same time.

● PPPoE

PPPoE (Mostly for ADSL modem users)

Your ISP requires you to input username / password

Username:

Password:

PPP MTU Setting:

TCP MSS Setting:

Service Name: (option)

Connect on Demand Max Idle Time: Min.

Keep alive Redial Period: Sec.

Figure 3-25 PPPoE Setting Screen

Item	Default	Description
User Name	Empty	The user name of your ISP account. The user name can consist of up to 80 alphanumeric characters and is case sensitive.
Password	Empty	The user password of your ISP account. The password can consist of up to 80 alphanumeric characters and is case sensitive.
Service Name (Option)	Empty	Your ISP will provide the service name.
PPP MTU Setting	1492	MTU (Maximum Transfer Unit) specifies maximum transmission unit size.
PPP mss Setting	1452	MSS (Maximum Segment Size) specifies maximum segment size.

Item	Default	Description
Connect on Demand and Max Idle Time		
Connect on Demand	Enable	You can configure your Wireless PnP Subscriber Gateway to cut your connection with your ISP after a specified period of time (Max Idle Time). If you have been disconnected due to inactivity, Connect on Demand enables your Wireless Subscriber Gateway to automatically re-establish your connection as soon as you attempt to access the Internet again. If you wish to activate Connect on Demand, click the radio button. If you want your Internet connection to remain, click the radio button of keep alive. The Max Idle Tim maximum value is 65535 minutes.
Max Idle Tim	10 Minutes	
Keep alive and Redial Period		
Keep alive	Disable	This option keeps your PPPoE enabled Internet access connected indefinitely, even when it sits idle. The Redial Period maximum value is 65535 seconds.
Redial Period	30 Seconds	

● **PPTP**

PPTP (Mostly for Europe ADSL modem users)

Your ISP requires you to input username / password / PPTP setting

PPTP Local IP Address:

PPTP Local Subnet Mask:

PPTP Server IP Address:

Username:

Password:

PPP MTU Setting:

TCP MSS Setting:

Connection ID/Name: (option)

Connect on Demand Max Idle Time: Min.

Keep alive Redial Period: Sec.

Figure 3-26 PPTP Setting Screen

Item	Default	Description
PPTP Local IP Address	Empty	A PPTP local IP address for the xDSL/Cable connection (provided by your ISP).
PPTP Local Subnet Mask	Empty	A PPTP local IP address for the xDSL/Cable connection (provided by your ISP).
PPTP Server IP Address	Empty	A PPTP server IP address for the xDSL/Cable connection (provided by your ISP).
User name	Empty	The user name of your ISP account. The user name can consist of up to 80 alphanumeric characters and is case sensitive.
Password	Empty	The user password of your ISP account. The password can consist of up to 80 alphanumeric characters and is case sensitive.
Connection ID/Name	Empty	Connection ID or connection name.
PPP MTU Setting	1460	MTU (Maximum Transfer Unit) specifies maximum transmission unit size.
TCP mss Setting	1360	MSS (Maximum Segment Size) specifies maximum segment size.
Connect on Demand and Max Idle Time		
Connect on Demand	Enable	You can configure your Wireless Subscriber Gateway to cut your connection with your ISP after a specified period of time (Max Idle Time). If you have been disconnected due to inactivity, Connect on Demand enables your Wireless PnP Subscriber Gateway to automatically re-establish your connection as soon as you attempt to access the Internet again. If you wish to activate Connect on Demand, click the radio button. If you want your Internet connection to remain, click the radio button of keep alive. The Max Idle Tim maximum value is 65535 minutes.
Max Idle Tim	10 Minutes	
Keep alive and Redial Period		
Keep alive	Disable	This option keeps your PPTP enabled Internet access connected indefinitely, even when it sits idle. The Redial Period maximum value is 65535 seconds.

● **Wireless Setting**

This page allows you to define ESSID, Channel ID and WEP encryption for wireless connection.

Figure 3-27 Wireless Setting Screen

Item	Default	Description
ESSID	Wireless	The ESSID is the unique name that is shared among all points in a wireless network. It is case sensitive and must not exceed 32 characters.
Channel	1	The channel ID for wireless connection.
WEP	Disable	Disables or enables the use of the WEP algorithm. Enabling the security can protect your data while it is transferred from one station to another.

● **WEP Key Setting**

Figure 3-28 WEP Key Setting

Item	Default	Description
WEP	Empty	The Wireless Subscriber Gateway supports 64-bit, 128 bit or 256 bit WEP encryption.
Mode	HEX	Options: HEX (Hexadecimal) and ASCII (American Standard Code for Information Interchange).

Item	Default	Description
WEP Key	1	<p>This selects which of the Keys the Wireless PnP Subscriber Gateway uses when it transmits. You can change the selected encryption key every now and then to increase the security of your network.</p> <p>Enter 5 characters for ASCII 64-bit WEP Key. Enter 10 characters for Hex 64-bit WEP Key. Enter 13 characters for ASCII 128-bit WEP Key. Enter 26 characters for Hex 128-bit WEP Key. Enter 29 characters for ASCII 256-bit WEP Key. Enter 58 characters for Hex 256-bit WEP Key.</p>

Figure 3-29 WEP Key Setting Save Screen

Note:

☞ After change the settings, please click **Apply and Restart** button to update the new settings and restart the device.

3-2-2 Advanced Setup

This section details the directions of configuring the Wireless Subscriber Gateway's advanced features, including:

1. System Configuration
2. WAN/LAN
3. Server
4. Authentication
5. Accounting
6. Login Page
7. Advertisement
8. Wall Garden
9. Syslog
10. Wireless

Note:

☞ After change the settings of device, please click **apply** button to save the new settings.

System

Define the Wireless Subscriber Gateway System configuration.

System	
System/Host Name	<input type="text"/>
Date/Time	Date: <input type="text" value="2002"/> / <input type="text" value="2"/> / <input type="text" value="24"/> (Year/Month/Day) Time: <input type="text" value="16"/> : <input type="text" value="10"/> : <input type="text" value="54"/> (Hour : Minute : Second) <input type="button" value="Get from my Computer"/>
Administrator Authorized Access IP Address	<input checked="" type="radio"/> Any <input type="radio"/> Specify <input type="text"/> ~ <input type="text"/> <input type="text"/> ~ <input type="text"/> <input type="text"/> ~ <input type="text"/> <input type="text"/> ~ <input type="text"/> <input type="text"/> ~ <input type="text"/>
Multicast Pass Through	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Allow remote user to ping the device	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
SSL Certificate	<input checked="" type="radio"/> Default <input type="radio"/> Customer Certificate
<input type="button" value="Apply"/>	

Figure 3-30 System Setting Screen

Item	Default	Description
System/Host Name	Empty	Some ISPs use Host Name to authenticate the user. The host name can consist of up to 40 alphanumeric characters.
Date/Time		
Date	YYYY/MM/DD	The system date of the Wireless Subscriber Gateway. The valid setting of year is from 2002 to 2035.
Time	HH:MM:SS	The system time of the Wireless Subscriber Gateway.
Administrator Authorized Access IP Address	Any	Options: Any and Specify.
Multicast Pass Through	Disable	This function allows for multiple transmissions to specific recipients at same time.
Allow remote user to ping the device	Enable	This function allows remote user to ping the Wireless Subscriber Gateway through Internet. Ping is normally used to test the physical connection between two devices, to ensure that everything is working correctly.

Item	Default	Description
SSL Certificate	Default	Option: default or customize certificate, These are two ways to create a certificate, one is purchase a certificate from a certificate authority (Ex. Verisign or Thawte), and another is creating a self-certificate (For example: Uses OpenSSL tool).

WAN/LAN

- Device IP (LAN IP) Setting

WAN / LAN Setting	
Device IP (LAN IP) Setting:	<p>The Device IP Address and Subnet mask settings</p> <p>IP Address: <input type="text" value="10.59.1.1"/></p> <p>Subnet Mask: <input type="text" value="255.0.0.0"/></p>

Figure 3-31 Device IP (LAN IP) Setting

Item	Default	Description
IP Address	10.59.1.1	The internal LAN IP address of your Wireless Subscriber Server Gateway.
Subnet Mask	255.0.0.0	The subnet mask of your Wireless Subscriber Gateway.

- WAN MAC Address

WAN MAC Address:	<input checked="" type="radio"/> Default <input type="radio"/> Change to: <input type="text" value="00"/> - <input type="text" value="00"/> - <input type="text" value="00"/> - <input type="text" value="00"/> - <input type="text" value="00"/> - <input type="text" value="00"/>
-------------------------	--

Figure 3-32 WAN MAC Address Setting

Item	Description
IP Address	The default MAC address is set to the WAN physical interface on device. If required by your ISP, fill in the MAC address of the network interface card in the change to field.

- WAN Port Mode

Please see the section Cable/xDSL ISP Setting in this chapter.

Server

Server Configuration	
Web Server	Web Server Port: <input type="text" value="80"/> (80, 8010 - 8060) <input type="checkbox"/> SSL Security
DHCP Server	<input type="radio"/> DHCP Disable <input type="radio"/> DHCP Relay <input checked="" type="radio"/> DHCP Server (Default) DHCP Server IP Address: <input type="text"/> DHCP Pool Start IP Address: <input type="text" value="10.59.1.2"/> DHCP Pool Size: <input type="text" value="253"/> (Max=1024) Lease Duration Minutes: <input type="text" value="1440"/>
Email Server Redirect	IP Address or Domain Name: <input type="text"/>
<input type="button" value="Apply"/>	

Figure 3-33 Server Configuration Screen

Item	Default	Description
Web Server	80	The web server port allowed range is 80 or 8010 to 8060 if administrator wants to remote access under NAT Network. For access the Wireless Subscriber Gateway system under NAT, please tab the “http://WAN Port IP Address: Port Number”. The function of remote access Internet.
DHCP Server	Enable	There are three types of DHCP Services. DHCP Disable—Disable the DHCP server function. DHCP Relay—Enable DHCP Relay function. DHCP Server—Enable DHCP Server function.
DHCP Relay	Empty	To route DHCP through an external server, the administrator needs to enable the DHCP relay and assign a valid DHCP server IP address.
DHCP Server IP Address	10.59.1.1	The IP address of DHCP relay server.
DHCP Pool Start IP Address	10.59.1.2	The DHCP Pool Start IP address. To set up the DHCP pool that is the same network with WAN port you just tab the WAN port IP address. If you want to set up a NAT DHCP pool please type the same network IP Address with NAT network as the DHCP server IP address.
DHCP Pool Size	253	The DHCP pool size range is 1 to 1024.
Lease Duration Minutes	1440	The DHCP lease time. The DHCP lease time range is 1 to 71582788 minutes.

Item	Default	Description
Email Server Redirect	Empty	To prevent some subscriber's original Email server may protect by firewall or NAT network. Wireless Subscriber Gateway provides an extra Email server parameter to forward the subscriber's Email. The Wireless Subscriber Gateway not only forwards the subscribers' E-mail via other E-mail server but also changes the SMTP header. The recipient of your E-mail sees the message as if you sent it from your local Internet Service Provide, not form the hotel or other place. Note: Before setting this sever, please make sure the E-mail sever relay function is opened. It must not exceed 50 characters.

Authentication

Authentication Configuration	
Authentication Type	<input type="radio"/> No Authentication <input checked="" type="radio"/> Proprietary
SSL Login Page Security	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
<input type="button" value="Apply"/>	

Figure 3-34 Authentication Setting Screen

Item	Default	Description
Authentication Type	Proprietary Authentication	Option: No Authentication or Proprietary Authentication. The Wireless Subscriber Gateway provides proprietary authentication, which is allowed service provider to build up an internet access business without any other authentication software like Radius Server.
SSL Login Page	Enable	Enables or disables SSL security of login page.

Accounting

- Web-based Account Generator Panel Setting

Web-based Account Generator Panel Setting			Preview / Operate
No.	Button name (Max. 12 characters)	Account Usage time	Charge (Decimals: <input style="width: 20px; border: none; border-bottom: 1px solid black;" type="text" value="2"/>)
Button 1	<input type="text" value="30 minutes"/>	<input type="text" value="30"/> minutes ▾	<input type="text" value="0.00"/>
Button 2	<input type="text" value="1 hour"/>	<input type="text" value="1"/> hours ▾	<input type="text" value="0.00"/>
Button 3	<input type="text" value="2 hours"/>	<input type="text" value="2"/> hours ▾	<input type="text" value="0.00"/>
Button 4	<input type="text" value="3 hours"/>	<input type="text" value="3"/> hours ▾	<input type="text" value="0.00"/>

Figure 3-35 Web-based Account Generator Panel Setting

Item	Default	Description
No.	Button1~Button 4	Button 1 to Button 4.
Button name	30Min/ 1hour/ 2hours/3hours	The button name can be specified text. The maximum character of the button name is 12.
Account Usage Time	30Min/ 1hour/ 2hours/3hours	Define each button's usage time.
Charge	0.00	Enter the amount of Internet service.

- Account Setting

Account Setting	
Expire time	Un-used account expires after <input type="text" value="12"/> hours

Figure 3-36 Account Setting Screen

Item	Default	Description
Expire time	12 hours	The expiration time valid range is 1 to 168 hours.

- Printout Setting

Please see the section “Customize Printout Text” in this chapter.

Login Page

For some Hotels or ISPs, they may hope to have a customize subscriber's login page to the users. This function helps they to realize the ideal. The page elements are including welcome image, background color, article etc. Certainly the administrator can decide to use only standard form. The Wireless Subscriber Gateway provides three different login page formats, including standard, advanced and frame format.

Login Page Customization															
<input checked="" type="radio"/> Standard															
<input type="radio"/> Redirect	Redirect Login Page URL Link: <input type="text"/> Code														
<input type="radio"/> Advanced	<table border="1"><tr><td>Welcome Slogan</td><td><input type="text" value="Welcome"/></td></tr><tr><td>Page Background</td><td><input checked="" type="radio"/> None <input type="radio"/> Background Color <input type="text" value="FFFFFF"/> View Color Grid</td></tr><tr><td>Article</td><td><div style="border: 1px solid gray; height: 40px;"></div></td></tr><tr><td>Article Text Color</td><td><input type="text" value="000000"/> View Color Grid</td></tr><tr><td>Article Background Color</td><td><input checked="" type="radio"/> None <input type="radio"/> <input type="text" value="FFFFFF"/> View Color Grid</td></tr><tr><td>Information</td><td><input type="text"/></td></tr><tr><td>Comments</td><td><input type="text"/></td></tr></table>	Welcome Slogan	<input type="text" value="Welcome"/>	Page Background	<input checked="" type="radio"/> None <input type="radio"/> Background Color <input type="text" value="FFFFFF"/> View Color Grid	Article	<div style="border: 1px solid gray; height: 40px;"></div>	Article Text Color	<input type="text" value="000000"/> View Color Grid	Article Background Color	<input checked="" type="radio"/> None <input type="radio"/> <input type="text" value="FFFFFF"/> View Color Grid	Information	<input type="text"/>	Comments	<input type="text"/>
Welcome Slogan	<input type="text" value="Welcome"/>														
Page Background	<input checked="" type="radio"/> None <input type="radio"/> Background Color <input type="text" value="FFFFFF"/> View Color Grid														
Article	<div style="border: 1px solid gray; height: 40px;"></div>														
Article Text Color	<input type="text" value="000000"/> View Color Grid														
Article Background Color	<input checked="" type="radio"/> None <input type="radio"/> <input type="text" value="FFFFFF"/> View Color Grid														
Information	<input type="text"/>														
Comments	<input type="text"/>														
<input type="radio"/> Frame	<table border="1"><tr><td>UP Frame</td><td>URL Link: <input type="text"/></td></tr><tr><td>Down Frame</td><td>Background Color <input type="text" value="FFFFFF"/> View Color Grid</td></tr></table>	UP Frame	URL Link: <input type="text"/>	Down Frame	Background Color <input type="text" value="FFFFFF"/> View Color Grid										
UP Frame	URL Link: <input type="text"/>														
Down Frame	Background Color <input type="text" value="FFFFFF"/> View Color Grid

URL Link (Up Frame)		The input format can be http://www.yahoo.com. The maximum character of the URL Link is 200.
Background Color (Down Frame)	FFFFFF	The down frame background can be specified color. For the background color format please views the color grid. The allowed format is Hexadecimal (RGB values of Red, Green, and Blue, where each component has a hexadecimal value of from 00 to FF. 000000 is black and FFFFFFFF is white.)

Advertisement

The system allow service provider to input 10 URL links for advertisement link purpose.

Advertisement URL Link	
This feature allows ISP to specify the advertisement URL link. The advertisement Web page will show on the browser when the subscribers start Network access.	
Frequency	<input checked="" type="radio"/> One Time Only <input type="radio"/> Multi-sending Interval <input type="text" value="0"/> Min(s)
URL Link 1	<input type="text"/>
URL Link 2	<input type="text"/>
URL Link 3	<input type="text"/>
URL Link 4	<input type="text"/>
URL Link 5	<input type="text"/>
URL Link 6	<input type="text"/>
URL Link 7	<input type="text"/>
URL Link 8	<input type="text"/>
URL Link 9	<input type="text"/>
URL Link 10	<input type="text"/>
<input type="button" value="Apply"/>	

Figure 3-45 Advertisement Setup

Item	Default	Description
Frequency	One time Only	The Frequency can be chosen One Time Only or Multi-sending. One Time Only means to send the advertisement link once after the subscriber Login. The Multi-sending means to send the advertisement link every interval minutes.
Interval	1	The value range is 1 to 60 (minutes).
URL Link 1~10	Empty	This function allows the administrator to input ten different websites in the table for advertisement. And these 10 websites will display to the subscribers at random when the subscribers login in the Wireless PnP Subscriber Gateway system. The input format can be "http://www.yahoo.com". The maximum character of the URL Link # is 200.

Wall Garden

We prepare three URL links that allows subscriber to access the specific Web pages even they didn't have a username or password. It's free trying and can use for advertisement.

Wall Garden	
This feature allows subscribers to access the specific Web pages even they didn't have a username or password. We provide three URL links to use for free trying and can use for advertisement.	
Link 1	Prompt: <input type="text"/> Link Page: <input type="text"/>
Link 2	Prompt: <input type="text"/> Link Page: <input type="text"/>
Link 3	Prompt: <input type="text"/> Link Page: <input type="text"/>
<input type="button" value="Apply"/>

Figure 3-48 Syslog Configuration

Item	Default	Description
Syslog	Enable	Enables or disables the syslog server function.
Syslog on LAN		
Server IP Address	Empty	Enter in the IP address of the syslog server. The device will send all of its logs to the specified syslog server.
Server MAC Address	Empty	Enter in MAC address of the syslog server. The device will send all of its logs to the specified syslog server.

Item	Default	Description
Syslog on WAN		
Server 1 IP Address	Empty	Enter in IP address of the syslog server one.
Server 2 IP Address	Empty	Enter in IP address of the syslog server two.
Syslog Attribute		
Syslog Information	60 minutes	The log included system information would be sent according to specified interval time.
System Boot Notice		If device have been rebooted, the log would be sent.
Wireless Association Information	60 Minutes	A log included wireless associated users information would be sent according to specified interval time.
Logged-in Users	60 Minutes	A log included logged-in users information would be sent according to specified interval time.
Subscriber Trace		A log included subscriber login/logout time would be sent once after subscriber logout.
Account Create		A log would be sent if account were created.
Account Activated		A log would be sent if account were activated.

SSID Broadcast:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	

Default
Apply

Figure 3-49 Wireless Setting Screen

Item	Default	Description
Beacon Interval	200	This value valid range is 1 to 1000 indicates the frequency interval of the beacon.
RTS Threshold	2432	This value valid range is 256 - 2342. This setting determines the packet size at which the Wireless PnP Subscriber Gateway issues a request to send (RTS) before sending the packet. A low RTS Threshold setting can be useful in areas where many client devices are associating with the Wireless PnP Subscriber Gateway, or in areas where the clients are far apart and can detect only the Wireless PnP Subscriber Gateway and not each other.
Fragmentation Threshold	2346	This setting determines the size at which packets are fragmented. Enter a setting ranging from 256 to 2346 bytes. Use a low setting in areas where communication is poor or where there is a great deal of radio interference.
DTIM Interval	3	This setting, always a multiple of the beacon period, determines how often the beacon contains a delivery traffic indication message (DTIM). The DTIM tells power-save client devices that a packet is waiting for them. The DTIM Interval value valid range is 1 to 65535.
Transmission Rates	1-2-5.5-22 (Mbps)	The basic transfer rates should be set depending on the speed of your wireless network. The default setting is 1-2-5.5-22 (Mbps).
Preamble Type	Long Preamble	The preamble type is a section of data at the head of a packet that contains information the Wireless PnP Subscriber Gateway and client devices need when sending and receiving packets. The setting menu allows you to select a long or short preamble type.
Antenna Selection	Left Antenna	Select left antenna, right antenna or diversity antenna. Left Antenna— If your device has removable antennas and you install a high-gain antenna on the device's left connector, you should use this setting for both receive and transmit. When you look at the device's back panel, the left antenna is on the left. Right Antenna— If your device has removable antennas and you install a high-gain antenna on the device's right connector, you should use this setting for both receive and transmit. When you look at the device's back panel, the right antenna is on the right.

Item	Default	Description
Antenna Selection	Left Antenna	<p>Diversity antenna— This default setting tells the device to use the antenna that receives the best signal. If your device has two fixed (non-removable) antennas, you should use this setting for both receive and transmit.</p>
Authentication Type	Both	<p>Select open system, shared Key or both.</p> <p>Open System— Allows any device to authenticate and then attempt to communicate with the wireless subscriber gateway. Using open authentication, any wireless device can authenticate with the wireless subscriber gateway, but the device can only communicate if its WEP keys match the wireless subscriber gateway. Devices not using WEP do not attempt to authenticate with a wireless broadband router that is using WEP. Open authentication does not rely on a RADIUS server on your network.</p> <p>Shared Key— During shared key authentication, the wireless subscriber gateway sends an unencrypted challenge text string to any device attempting to communicate with the wireless subscriber gateway. The device-requesting authentication encrypts the challenge text and sends it back to the wireless subscriber gateway. If the challenge text is encrypted correctly, the wireless subscriber gateway allows the requesting device to authenticate. Both the unencrypted challenge and the encrypted challenge can be monitored, however, which leaves the wireless subscriber gateway open to attack from an intruder who calculates the WEP key by comparing the unencrypted and encrypted text strings. Because of this weakness, shared key authentication can be less secure than open authentication. Like open authentication, shared key authentication does not rely on a RADIUS server on your network.</p> <p>Both— With this setting stations can communicate with or without data encryption.</p>

Item	Default	Description
SSID Broadcast	Enable	<p>Enable— It allows devices that do not specify an SSID to associate with the wireless broadband router.</p> <p>Disable— Devices that do not specify an SSID (devices that are "broadcasting" in search of an access point to associate with) are not allowed to associate with the access point. With no selected, the SSID used by the client device must match exactly the wireless broadband router's SSID.</p>

- Default

This operation will load the default manufacturer configuration to the system. All this page (Wireless) configuration setup will be replaced by default settings.

If you would like to leave the configuration page, please click apply to exit.

Figure 3-63 Logout Screen

Appendix A RJ-45 Connector Description

RJ-45 Ethernet Port

The Wireless Subscriber Gateway RJ-45 Ethernet port can connect to any networking device that use a standard LAN interface, such as a Hub/Switch Hub or Router. Use unshielded twisted-pair (UTP) or shield twisted-pair (STP) cable to connect the networking device to the RJ-45 Ethernet port.

Depending on the type of connection, 10Mbps or 100Mbps, use the following Ethernet cable, as prescribed.

10Mbps: Use EIA/TIA-568-100-Category 3,4 or 5 cable.

100Mbps: Use EIA/TIA-568-100-Category 5 cable.

Figure A-1 RJ-45 Connector and Cable Pins

Note:

☞ To prevent loss of signal, make sure that the length of any twisted-pair connection does not exceed 100 meters.

Appendix B Regulations/EMI Compliance

FCC Regulatory Statement

Part 15-Class B compliant device

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including that which may cause undesired operation.

This equipment has been test and found to comply with the limits for a computing device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. The equipment and the receiver should be connected the outlets on separate circuits.
4. Consult the dealer or an experienced radio/television technician for help.

Changes or modification not expressly approved be the party responsible for compliance could void the user's authority to operate the equipment.

LIMITED WARRANTY

Wireless PnP Subscriber Gateway

What the warranty covers:

We warrant its products to be free from defects in material and workmanship during the warranty period. If a product proves to be defective in material or workmanship during the warranty period, we will at its sole option repair or replace the product with a like product with a like product. Replacement product or parts may include remanufactured or refurbished parts or components.
