

Blueball First Class Sandvox Designs

Overview and Usage Tips For Blueball First Class Sandvox Designs

Thank you for purchasing one of our original Sandvox Designs bundle.

Below we have listed various sections of information to help you maximize the use of your Blueball Design Sandvox Design(s) as you use it with Sandvox to produce your new web site.

If you see something we can do to make your experience better when using our design with Sandvox to create your web site, or have a suggestion, please let us know!

Contents

1 - Blueball First Class Designs Information - **IMPORTANT - PLEASE READ!

2 - Browsers supported by our designs

1. Blueball First Class Designs Information and Tips

How to install your Blueball First Class designs:

After you download your Blueball First Class designs bundle file you will need to double click on it to unzip the file. In the Blueball_First Class_v1 folder you will find 6 individual Blueball First Class Sandvox design files that end with the extension .svxDesign.

To install each Blueball First Class design you need to double click on each design file and the design will be automatically installed into Sandvox. By default all third party designs are installed into Sandvox's Application Support folder. After you finish installing your designs, you MUST restart Sandvox before your newly installed designs will appear in the design preview area at the top of the Sandvox work window.

Your First Class design bundle includes:

- 6 different Blueball First Class 960px wide Sandvox designs.
- 1 Blueball First Class readme manual pdf file.
- 1 layered Photoshop CS3 image file to use to create your own custom "Stamp" banner images with with a built-in layer mask included to help position your image into the stamp area.
- Built-in @font-face custom font style for the Title line of text, the H2 headline, and the blockquote area text (requires Sandvox Pro to add into your page text).

Adding Your Own Custom Banner Images Into The First Class Design Layout

The Blueball First Class designs allow you to easily add your own banner image into your First Class design's page layout. The custom banner image is placed into the "#title" div area's background in the top area of the page under the title and title paragraph/slogan lines of text above the content and sidebar areas.

***IMPORTANT - Your custom banner image must be sized exactly as noted below!**

Banner image size - 940px wide by 175px tall

We recommend saving your custom banner image as a 72 ppi resolution sRGB jpg image file with a 70% to 100% quality setting using the "save for web" function/feature (if available) in your image editor. **Make sure there are no spaces in your image file name!**

After creating your new banner image, open up the Site Inspector window, click the Media tab and then drag your image into the box labeled "Banner" or use the "Select" button to choose your custom banner image, and your new banner image will replace the default image used in the design automatically.

Logo Image

The logo image is placed in the #title div area over the image area in the stamp graphic to the right of the Title and Title Paragraph lines of text above the banner image. Doing it this way allows Sandvox users without access to an image editor like Photoshop or Pixelmator to easily add their own image into the stamp area to personalize their banner image area quickly with minimal effort.

The logo image size is 216px wide by 130px tall. Your logo or photo image file must be that exact size or it will not display correctly in the design layout. Be sure it is set to a 72 ppi resolution, in sRGB or RGB color mode, and saved as a jpg or png file. We recommend using the "save for web" feature in your image editor with quality settings between 55% to 80% saving it to a .jpg file format. **If this sounds too technical, just make sure you crop your image down to the size noted above before you select it with the logo placement feature in Sandvox's site inspector window.**

Nav Menu Usage Tips - Important!

The nav menu layout used in the Blueball First Class theme allows you to have a large amount of pages included in it. **The nav menu will wrap to multiple lines of nav menu items if needed increasing in height automatically for you.**

The individual nav menu names for your pages will only display in a single line of text and will not wrap to 2 lines themselves, so we recommend keeping your page names as short as possible to make it easier for viewers of your site to navigate through your pages..

Color Hexcodes Used In The Blueball First Class Designs

Blue: #006190

Brown: #6A3501

Green: #226F3F

Orange: #EA6313

Purple: #7A3676

Red: #CB2016

Title and Title Paragraph Text Length

Title Text - You can use multiple lines of text for the Title in this design layout. We recommend limiting it to no more than 2 lines of text with 1 line recommended if you have several subtitle lines of text in the Title Paragraph area below the Title. Also it needs to be left aligned.

Title Paragraph Text - You can use multiple lines of text for the Title Paragraph (subtitle) area in this design layout. We recommend limiting it to no more than 3 lines of text with 2 lines recommended if you have 2 Title lines of text in the Title are. Also it needs to be left aligned.

Using Images With Sidebar Pagelets

When placing images into Sidebar Pagelets and Callouts, the First Class design will automatically resize your images to fit using the default sizing we have specified in the First Class design's plist file. You do not need to resize your image files. This will be done automatically for you.

Using Images In Sandvox and The Blueball First Class Designs

Since Sandvox by default will currently resize your image files in the content area down to 320px wide if they are wider than that originally and down to 640px in width on the single photo page, any Sandvox user has been limited on how they can adjust and use larger images in the site page content area.

Your Site Page Image Sizes Will Be Displayed The Full Width Of The Content Area With The Sidebar Showing By Default If Wider Than The Content Area Width.

We have increased the image sizing for the content area images to better utilize the available content area width in the Blueball First Class designs. In other words, the image width is set to fill up the available content area width (less 15px) with the sidebar showing instead of being restricted to just the Sandvox default maximum 320px width. We have also increased the image width sizing to better fill up the content area width on single image pages typically used in a photo album collection too.

(Continued next page...)

***NOTE: You may have to refresh your page view in the Sandvox work window to force Sandvox to resize your images that are affected by this built-in image scaling in the Blueball First Class info.plist file.**

Working With Sandvox's Default Sizing - For new and average Sandvox users we recommend you create your own images at the final display size, and drag and drop them into position on your site pages. This will also keep your site file size down to a minimum. Be sure your images are set at a 72 ppi resolution, and in sRGB color mode. Sandvox does not yet support png file transparency so be sure to flatten your image files before saving them. Or you can let Sandvox resize them and not do any image file creation. Either way will work but be sure to open the preferences window and set your final image output quality levels if you are letting Sandvox crop and reduce your original image files.

We've Arranged Our main.css File Code Into Groups For Easier Modification By Advanced Sandvox Users

If you open the main.css file you will see that the css code in our file is arranged in groups by areas of the design layout. We designed it this way to make it easier for advanced Sandvox users who want to "tinker under the hood" and customize the css some.

BE SURE TO MAKE A BACKUP COPY OF YOUR DESIGN BEFORE ATTEMPTING ANY MODIFICATIONS OF THE CSS CODE!

***NOTE!!! We do not recommend modifying the css code in this design unless you are well versed and familiar with css styling and coding.** Modifying the css code could break the display functionality of the design in your Sandvox site. Any modifications are at the sole risk of the user and Blueball Design does not guarantee the performance of any Blueball Sandvox Design which has been altered or modified and we cannot be held liable if problems arise from your modifications.

If you have questions on how to modify the css code elements used in this theme, post them on the Sandvox Yahoo user group at: <http://tech.groups.yahoo.com/group/sandvox/>

Another very helpful resource is available from Karelia Software for doing simple modifications to your Sandvox design at: http://docs.karelia.com/z/Quickly_modifying_existing_designs.html

We Offer Great Support Before and After Your Design Purchase

Blueball Design has become known for our great customer support with our Rapidweaver Theme users over the past 5-1/2 years and now offer the same support to our Sandvox Design users. If you have a question, please submit it to us using our contact form page. Our Technical Support policy is listed below.

(Continued next page...)

Technical Support

Technical support will be limited to questions and problems specifically associated with unaltered designs in normal conditions. We do not have the resources to offer free Sandvox technical support or to provide training on how to use Sandvox.

We also cannot provide support for modified themes or graphics. We will be glad to assist you with modified design questions as time permits, but recommend you post questions in our Blueball Sandvox forum or in the Sandvox Yahoo groups.

You are responsible for adding or editing your web site's content. A complete and very helpful on-line Sandvox user manual with videos and tutorials can be found at: <http://docs.karelia.com>.

We do offer support relating to our design products and encourage you to report any bugs or problems you have with one of them. We also welcome any questions you may have about one of our Sandvox design products.

We Offer Sandvox Design Modification Services

Blueball Design offers Sandvox Design modification services starting from \$40 and up. If you are wanting to change your color scheme, add in a new image, adjust the sizing of certain items, change the font styles, etc., please email us what you are wanting and we'll be happy to help you out with your Sandvox design mod. We do not do "one off" custom Sandvox designs at this time.

A Final Word On Our Sandvox Designs

We believe that web design should be clean, simple, unique, professional and straightforward in functionality and design. Our Sandvox Designs will be developed following this mission statement. By keeping image use in the layout to a minimum our Sandvox Designs will produce sites that publish quicker and download faster for your site viewers, and will offer more stable display functionality in all the major browsers.

2. Browsers Supported By Our Blueball First Class Design.

The Blueball First Class Designs have been tested and will display correctly on the following browsers: Safari (Mac/PC), Firefox (Mac/PC), Chrome (Mac/PC), and Internet Explorer 6, 7, and 8 (PC). This covers approx. 98% ± of the internet browser market. We do not support MAC Internet Explorer 5.2 or test our designs on Opera, or Camino at this time.
