LISTED

Installation

TOOLS REQUIRED
Phillips Screwdriver   Wire Cutters   Pliers   Step Ladder
1 Unpack and inspect fan carefully to be certain all contents are included. (See exploded view parts lists.)
2 Before you begin installing the fan, Switch power off at Service panel and lock service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
3 Before installing this fan make sure the outlet box is properly installed to the house structure. To reduce the risk of fire, electric shock, or personal injury, mount to outlet box or supporting system acceptable for fan support. (Mounting must support at least 35 lbs.)
4 Install mounting brackets to outlet box in ceiling using the screws and washers provided with the outlet box.

5 Feed motor lead wires through downrod/canopy assembly and insert downrod into motor yoke. Next, insert clevis pin through yoke and downrod and secure with cotter pin. (see Inset) Tighen both yoke set screws to further secure downrod.
Cotter Pin
Clevis Pin
Set Screws
6 Carefully lift fan assembly onto mounting bracket. Rotate fan so that the notch on the ball engages the ridge in the mounting bracket. This will allow hands-free wiring.

Ball Notch
Ridge

CANADIAN MOUNTING SYSTEM INSERT
1

Cotter Pin

Clevis Pin

Set Screws

Feed motor lead wires through downrod/canopy assembly and insert downrod into motor yoke. Next, insert clevis pin through yoke and downrod and secure with cotter pin. (see Inset) Tighen both yoke set screws to further secure downrod.

2

Safety Cable
Mounting Bracket

While the fan assembly is still on the ground thread the safety cable through the mounting bracket.

3

Set screw

3" lag screw

plain washer
safety cable

Lift fan assembly and install the safety cable directly to the building structure using the 3″ lag screw and plain washer provided. Before proceeding to the the next step make sure that the cable is properly installed and will support the fan weight. Make sure the screw washer and safety cable are installed using the order pictured above.
4

Install mounting brackets to outlet box in ceiling using the screws and washers provided with the outlet box.

5

Ball Notch
Ridge

Carefully lift fan assembly onto mounting bracket. Rotate fan so that the notch on the ball engages the ridge in the mounting bracket. This will allow hands-free wiring. For wiring instructions please refer to page 4 step #7.

CANADIAN SAFETY TIPS

WARNING: MOUNT ONLY TO AN OUTLET BOX MARKED ACCEPTABLE FOR FAN SUPPORT

All set screws must be checked and retightened where necessary before installation.

Installation

Note:

After installation, please refer to operation, maintenance and troubleshooting sections in this manual. If your fan is packaged with a light kit or if you wish to install a separately purchased light kit, please refer to the insert sheet titled: Light Kit Installation

---

7 Standard wiring option

House   Fan

Black ▬▬▭   ▬▬▬ Black

* Attach blue wire only if attaching light kit with fan

White ▭▬   ▭▭ Blue *
Green ▨▨▨   ▭▭ White
                 ▭▭ Green(Downrod)
                 ▭▭ Green(Bracket)

Secure with twist-lock wire connectors (included)

For pullchain controls, follow diagram above. Make sure that all exposed wiring is secured inside wire nuts. Note: Wires from house may vary in color and may not include ground wire. After wiring is conplete, gently push wires into junction box with wire nuts pointing upward. Refer to point 3 of safety tips.

---

8 Wiring option with wall speed control

Light Switch
Fan Switch

Wall
Control

For control of fan and optional light from wall location, follow diagram above. NOTE: A professional electrician is recommended for this type of installation.

9

Raise the canopy up and align the two holes in the canopy with the two holes in the hanger bracket. Secure with two 5/32 x 1/2″ screws provided.

---

10 COMBO-BLADE

Combo-Blades feature two high quality finishes on one blade. Select the one that best complements your decor, or change the style with just a flip of the blade.

11

Fiber washers

Attach blade brackets to blades using the blade bracket screws and washers provided.

12

To gain access to the blade bracket attachment holes remove the switch housing cover by unscrewing the three screws. Gently slide the cover off.

13

Shipping stabilizer tab

Remove plastic shipping stabilizer tabs from motor, if present. The screws, washers and motor pads are pre-installed to the blade holders. Attach blade assembly to motor by tightening first screw one turn, then tighten second screw securely. Then, go back and tighten first screw securely.

14

After attaching blade; reinstall the switch housing using the three screws previously removed.

15

Switch Housing

Decorative Cap

Tab

Unscrew counterclockwise
CAUTION: **Make sure power is off.** If you purchase a light kit for your fan and would like to install onto your fan start by unscrewing the switch housing cap and tab from the switch housing. Feed the black and white wires of the light kit through the hole in the decorative cap and the hole in the switch housing.

16

Switch Housing

Screw clockwise

Decorative Cap
Light kit fitter

Screw the light fitter back through the decorative cap into the switch housing hole. Connect the black wire from the light kit to the blue wire from the fan marked for light kit. Connect the white wire from the light kit to the white wire from the fan marked for light kit. Re-attach switch housing to fan.

If you have difficulty operating your new ceiling fan, it may be the result of incorrect assembly, installation, or wiring. In some cases, these installation errors may be mistaken for defects. If you experience any faults, please check this Trouble Shooting Chart. If a problem cannot be remedied, or you are experiencing difficulty in installation, please call our Customer Service Center at the number printed on your parts list insert sheet.
Warning: Before servicing or cleaning unit, Switch power off at Service panel and lock service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

TROUBLE	SUGGESTED REMEDY

1. If fan does not start:

1. Check main and branch circuit fuses or circuit breakers.
2. Check line wire connections to fan and switch wire connections in switch housing.
3. Check to make sure the dip switches from the transmitter and receiver are set on the same frequency.
4. Make sure forward/reverse switch is firmly in up or down position. Fan will not operate when switch is in the middle.
5. Make sure that shipping stabilizer tabs have been moved from motor (see step #13).
CAUTION: Make sure main power is turned off.

2. If fan sounds noisy:

1. Check to make sure all screws in motor housing are snug (not over tightened).
2. Check to make sure the screws which attach the fan blade holder to the motor are tight.
3. Check to make sure wire nut connectors in switch housing are not rattling against each other or against the interior wall of the switch housing.
4. If using an optional Ceiling Fan Light Kit, check to be sure the screws securing the glassware are finger tight. Check to be sure light bulb is tight in socket and not touching glass shade(s). If vibration persists from glass, remove glass and install a 1/4″ wide rubber band on glass neck to act as an insulator. Replace glass and tighten screws against rubber band.
CAUTION: Make sure main power is turned off before entering switch housing.
5. Some fan motors are sensitive to signals from Solid State variable speed controls.
DO NOT USE a Solid State variable speed control.
6. Allow "break-in" period of 24 hours. Most noises associated with a new fan will disappear after this period.

3. If fan wobbles:

Figure 1

Figure 2

1. Make sure that the ridge of the canopy engages the notch in the downrod ball.
2. Check that all blades are screwed firmly into blade holders.
3. Check that all blade holders are tightened securely to motor.
4. Make sure that canopy and mounting bracket are tightened securely to ceiling junction box and junction box is mounted firmly to ceiling joist.
5. Most fan wobble problems are caused when blade levels are unequal. Check this level by selecting a point on the ceiling above the tip of one of the blades. Measure this distance from blade tip to ceilng. Keeping measure within 1/8", rotate the fan until the next blade is positioned for measurement. Repeat for each blade. If all blade levels are not equal, you can adjust blade levels by the following procedure. To adjust a blade tip down, insert a washer (not supplied) between the blade and blade holder at the screw closest to the motor. To adjust a blade tip up, insert washer (not supplied) between the blade and blade holder at the two screws farthest from the motor. Reverse the position of the washer if blades mount from top of blade.
6. If blade wobble is still noticeable, interchanging two adjacent (side by side) blades can redistribute the weight and possibly result in smoother operation.

4. If light does not work:

1. Check wire from fan to make sure it is connected to hot wire from house.
2. Check for loose or disconnected wires in fan switch housing.
3. Check for loose or disconnected wires in light kit.
4. Check for faulty light bulbs.
CAUTION: Make sure main power is turned off before entering switch housing.
