> - In order to ensure you are accessing all the latest updates to OAMS please clear your cache and browsing history in your internet browser (Instructions for how to do this in Chrome and Mozilla are attached).

What's changed?

ID	Category	Description
PROD-1797	Bug fix	When a Point of Contact record is being edited by more than one user, the system will only allow changes to be saved by the user that had saved their changes first.
PROD-1814	Bug fix	Corrects an issue where the "Advisor" field setting was being defaulted to the current user and not retaining previous selections when editing dashlets.
PROD-1501	Bug fix	Corrects an issue where clicking on "Date Sent" in the Emails screen did not sort emails.
PROD-1493	Bug fix	Addresses a minor display issue where a blank space was appearing after students' names on the "Watchlist" page.
PROD-1505	Bug fix	Addresses a display issue where the "Notification" header title was not displaying in the "My Watchlist Notifications" dashlet.
PROD-1495	Enhancement	Field validation has been added to the "Email" field on the Advanced Search screen. When inputting an email address, the system will first verify that a valid email address format was used before allowing a search. Note: Wildcard email searches can still be performed by using an asterisk following any character in the email (i.e. name@*).

Known bugs and requests

The following list includes items that the OAMS team has identified but has not yet implemented. The team appreciates your patience as we continue assessing defects and targeting fixes and enhancements for future releases.

ID	Category	Description
PROD-1494	Bug fix	Wrong unit emails displayed after changing unit in Emails browser
PROD-1486	Bug fix	Format of Home Page changes intermittently
PROD-1500	Bug fix	Document names are inconsistent in display panels
PROD-1498	Bug fix	Additional tool bar appears in the PoC details page
PROD-1502	Bug fix	The GG file upload does not overwrite existing data in the Go Global Program

How to send bug/change requests

Please visit http://support.as.it.ubc.ca/SupportRequest and complete the ticketing form. SIS Support will review defect reports and change requests, prioritizing and assigning them for resolution, as appropriate.

The most current version of the OAMS online user manual with all the up to date changes is now available at:
