PARENTAL CONTROL USER MANUAL

INDEX

WHAT IS THE MYMAGA HOME SCREEN?

mymaga home screen is an application launcher with parental control features that provides the Administrator the potentiality to manage and to restrict its users to applications that have been previously approved. mymaga home screen also prevents the users from downloading new applications or surf the web without having the Administrator's permits first. With its built-in micro browser, the users will only be allowed to surf on the approved web sites without the possibility to surf on others that have not been approved.

FIRST LOGIN
ADMINISTRATOR

The first time you turn on the mymaga home screen you are presented with the login menu. By default there is a built-in Administrator account. With that account you can manage all the functionalities available on mymaga home screen[1].
Press on the Administrator user to login for the first time.

Swipe from right to left to open the hidden menu and swipe from left to right to close it.

1. Open picture album
2. Open configurations menu
3. Log Off
4. Internet quick launch

2.5.3 INTERNET QUICK LAUNCH

Using the Internet Quick Launch, the Regular User can easily access the Internet with micro browser.

The micro browser is a web browser specially developed to allow the users to access the internet only surfing on the web pages allowed by the Administrator. If the user only has access to google.com he will not be able to open other website, for ex. yahoo.com. However, he is able to open all websites inside Google™ domain, for ex. mail.goooge.com.

2.6 APPLICATION'S MANAGEMENT

### 2.6.1 CHANGE APPLICATIONS/WEBSITE PERMISSIONS
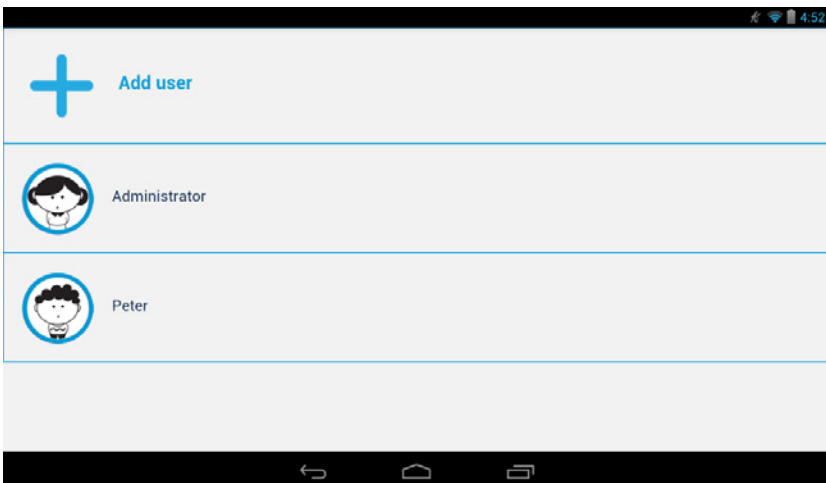

After signing-in with the Administrator account and accessing the configurations menu, click on the Regular User you want to define the applications/websites access.
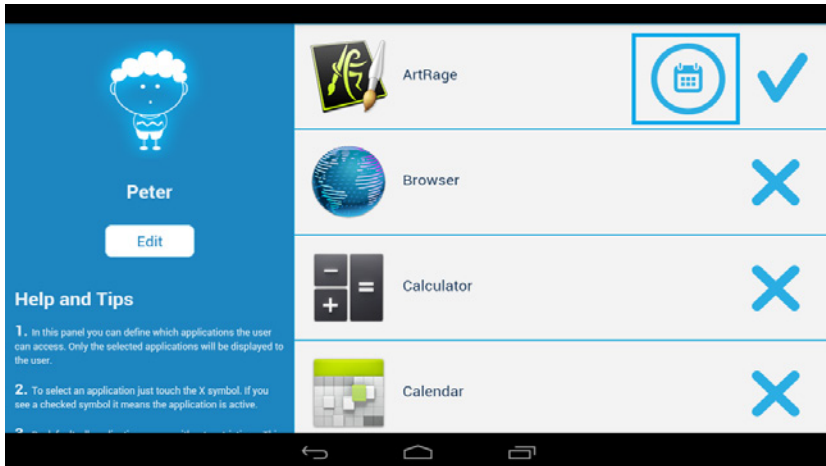

In this panel you can define which applications the Regular User can access. Only the selected applications will be displayed to the user. If you click on the 'Calendar' icon you will be able to change the application schedule.

2.6.2 APPLICATION SCHEDULE
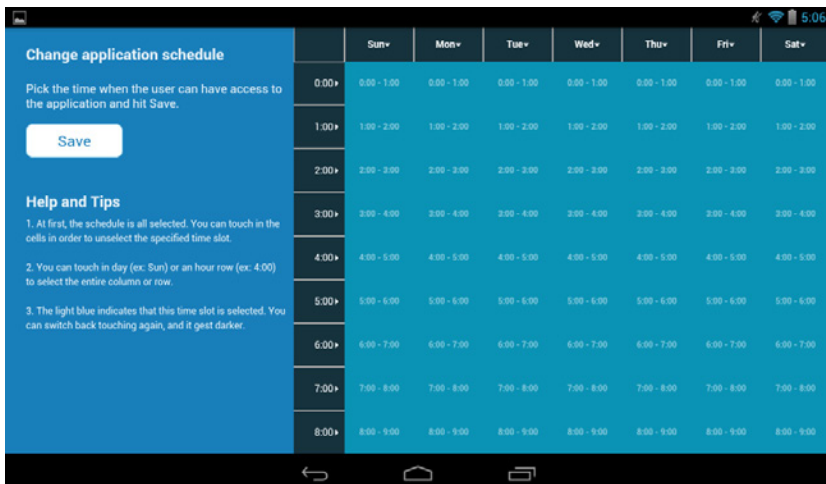

Pick the time when the user can have access to the application and hit save.

2.7 ALLOW ACCESS TO WEBSITES/APPLICATIONS

When the Regular User tries to access a website, the system will check if the website was previously approved by the Administrator. If not, the Regular User will not be able to navigate on the referred website. However, if the content is blocked the Administrator will be able to approve it.

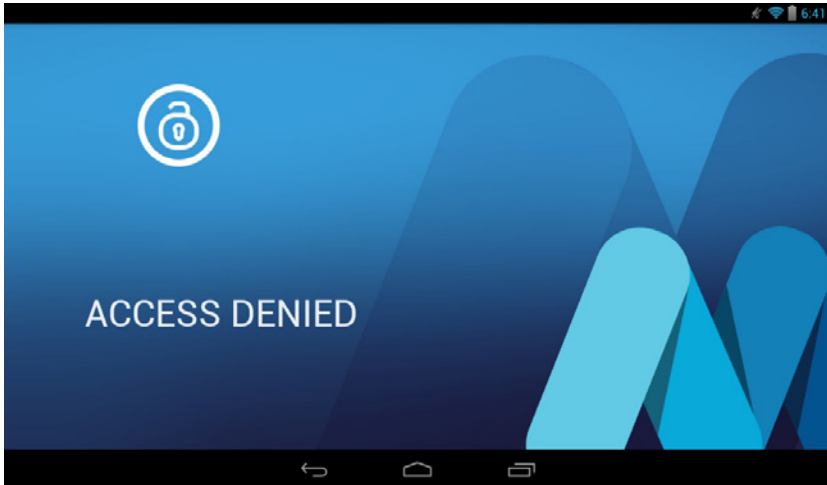

When the Regular User tries to access a forbidden website or application he/she will be prompted with an "Access Denied" screen. Clicking on the "lock" icon will open the Authorization Request.
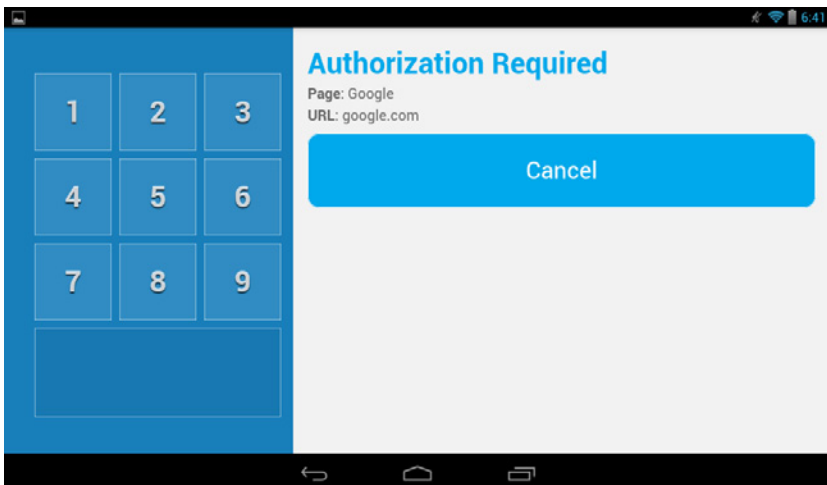

In this screen the Administrator will insert his password to give access to the selected website /application.

Note: If the Administrator does not have a password he/she will not be able to control the Authorization Requests.
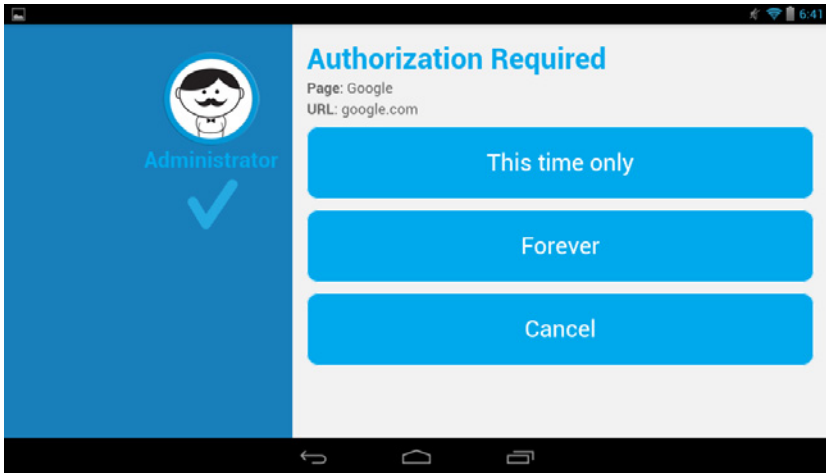

There are two types of authorizations.

This time only – used for Website access and Applications. With this option the Administrator will be able to choose for how long the user can use that application.

Forever – used only for Website access. With this option the Administrator will give access forever to that website.
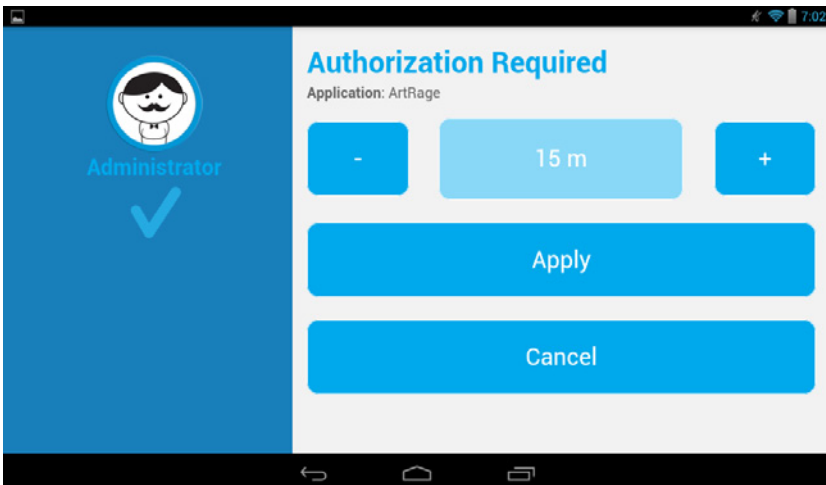

2.8 RESET PASSWORD

After selecting the user account, scroll down on the left side and click "Reset Password". The Administrator have the privileges to reset the passwords from any registered user.

2.9 CLEAR PASSWORD

If you insert a wrong password, tap on the password field to clear it.
