INDEX......112

What's New?

The following table describes the sections updated to reflect the new and modified features on Xedio Dispatcher versions 4.1 and 4.2 (compared to Xedio Dispatcher version 4.0).

In the user manual, the icon has been added on left margin to highlight information on new and updated features.

Click the section number (or the description) in the table to jump directly to the corresponding section.

Section	Description
1.1 - 4.4.1	Possibility to import media from CANON Compact Flash drive.
1.2	Updated list of supported formats and codecs.
2.2	Updated hardware requirements.
3.4.1	Updated list of Parameter Profiles.
3.4.2	Updated list of Keyboard Profiles.
5.2.1	Storyboard metadata can be entered at storyboard creation.
3.3 - 4.3	Possibility to create metadata profiles for storyboards and edits.
5.2.1 - 5.2.2	Possibility to associate metadata profile values with a storyboard.
4.5.3 - 4.5.4	Possibility to associate metadata profile values with a media.
1.1 - 4.2 - 5.9 - 4.6.3 - 5.9.4	Export Tool: new export tools to export to file and to export to device
3.1.2	Possibility to create an export profile intended to export to Avid (Interplay or AAF).
3.1.2 - 5.9.3	Storyboard cut points are exported as logs if the Generate log sheet file or the Export logs as locators to Avid option has been selected.
5.2.1	Possibility to select the start timecode that will be taken into account during the storyboard export. This can be set at storyboard creation or edited later on.
5.9.5	Possibility to export clips or sub-clips to any type of export destination.

1. Introduction

1.1 PRODUCT DESCRIPTION

Xedio Dispatcher is a software product used for importing A/V files, rough-cutting and exporting rough-cuts to multiple destinations and formats.

Xedio Dispatcher automatically detects connected devices (such as CANON, P2, XDCAM or XDCAM EX devices), and instantly displays their contents. This allows immediate browsing of the media directly on the device, which speeds up the shoot selection, sub-clipping and/or fast rough-cut editing. Shoots, sub-clips and edits can also be instantly logged. Xedio Dispatcher also scans drives or folders upon user request and displays their content.

As soon as clips are displayed in Xedio Dispatcher, they are available to Xedio database and media server as growing clips, without waiting the end of transcoding process.

Once selected or created, the sub-clips and consolidated storyboards can be easily transferred from the device itself to any target such as EVS video server, media server (for example: SAN, XStore), or any type of storage. They can also be exported to a file that can be read by an external system or to an external device such as a tape recorder.

Simultaneous transfers to multiple destinations in multiple formats are supported thanks to Xedio on-the-fly SD/HD rewrapping & transcoding capabilities.

1.2 SUPPORTED FORMATS AND CODECS

The following tables provide information on the currently supported source and target codecs in proxy, SD and HD.

PROXY VIDEO CODECS

Supported codecs for source files	 Sony XDCAM proxy
	 Panasonic P2 proxy
	• MPEG-1 TS/PS
	• H.264 TS
Supported codecs for export	• MPEG-1 TS/PS
	• H.264 TS
	• JFIFF (Avid Proxy)

....

SD VIDEO CODECS

Supported standards	• PAL			
	• NTSC			
Supported codecs	• Sony XDCAM (DV25/DVCAM, MPEG-IMX 30/40/50)			
for source files	 Panasonic P2 (DVCPRO25, DVCPRO50) 			
	 QuickTime (movie & reference) (DV25/50, DVCPRO25/50) 			
	• MXF (DV25/50, DVCPRO25/50)			
	 AVI (DV25/50, DVCPRO25/50) 			
	• MPEG (MPEG-2 Long GOP)			
Supported codecs	• Long GOP MPEG (MPEG1, MPEG2)			
for export	 Sony XDCAM hi-res (IMX-D10 30/40/50) 			
	 Panasonic P2 hi-res (DV25, DVCPRO25, DVCPRO50) 			
	 AVI (DV25, DVCPRO25, DVCPRO50) 			
	 QuickTime (DV, DVCPRO25, DVCPRO50, IMX-D10 30/40/50, MJPEG) 			
	 Raw DV (DV, DVCPRO25, DVCPRO50) 			
	• EVS (DVCPRO50, MJPEG, IMX-D10 30/40/50)			
	 PCM (wav audio files) 			
	• WM9			
	• H.264 AVC (MP4, TS)			
	• MXF OP1A SMPTE (DVCPRO50)			
	 MXF OPAtom Avid (IMX-D10 30/40/50 and DVCPRO50) 			

HD VIDEO CODECS

Supported standards	• 1080i 50/59.94Hz	
	• 720p 50/59.94Hz	
Supported codecs	• Sony XDCAM (4:2:2, 4:2:0)	
for source files	• Sony XDCAM Ex	
	Sony XDCAM SxS	
	 Panasonic P2 (AVC Intra 50/100, DVCPROHD) 	
	• Canon XF (HD 4:2:0)	
	 QuickTime (movie & reference) (DVCPROHD, Avid DNxHD, ProRes) 	

	 MXF (Avid DNxHD, AVC Intra 100, DVCPROHD, MJPEG)
	• AVI (DV25/50, DVCPRO25/50)
	• MPEG MPEG-2 Long GOP
Supported codecs	• EVS (AVC Intra 100, MJPEG & proxy, Avid DNxHD®)
for export	 QuickTime (AVC Intra 100, DVCPRO100, Avid DNxHD®)
	• XDCAM HD (422, 420)
	 Panasonic P2 high-res (AVC Intra 50/100, DVCPR0100)
	• H.264 AVC (MP4, TS)
	 Long GOP MPEG-2 (TS, PS)
	 MXF OP1A SMPTE (Avid DNxHD®, DVCPROHD, AVC Intra 100)
	 MXF OPAtom Avid (Avid DNxHD®, DVCPROHD, AVC Intra 100)

REQUIREMENTS RELATED TO SOURCE FILES

The source files must meet the following requirements:

- All video and audio source files (SD or HD) must include maximum 8 audio channels at 48 KHz, in stereo pairs (dual mono is not supported).
- HD editing is limited to (less than) 120 Mbps codecs and should be performed using SAS storage or external disk arrays.

2. Installation

2.1 PREREQUISITES

Here is the list of prerequisites to the installation of Xedio Dispatcher:

- Hardware requirements must be met
- Software requirements must be met
- The XSecure application needs to be installed on the workstation with all the required license codes
- Xedio Dispatcher has to be installed with administrator rights.
- It is recommended to close all other applications before starting the Xedio Dispatcher installation, especially all EVS applications.
- XDCAM and/or P2 drivers must be installed on the Xedio Dispatcher computer.

2.2 HARDWARE AND SOFTWARE REQUIREMENTS

HARDWARE REQUIREMENTS

Xedio Dispatcher can be installed on a single laptop or desktop computer.

The browser and player of Xedio Dispatcher use the CPU resources of the Xedio Dispatcher workstation to decode the A/V material, depending on the source and the target codecs.

The guidelines for the hardware minimum requirements are:

- CPU:
 - o For 720p and AVC Intra 100: Core i7 2.8 GHz processor (or equivalent)
 - For all other codecs and video standards: Core Duo 2.33GHz processor (or equivalent)
- RAM: 3GB
- Display Resolution: minimum 1280x1024
- Gfx Card: no specific needs ("standard" PC Gfx card)

Options:

- USB 2.0, IEEE 1394 (Firewire) and/or PCIe interface(s) depending on the device you want to connect to Xedio Dispatcher machine (FTP access not supported).
- For Audio monitoring and/or Audio Guide Track: Digigram Audio Board or any other Audio Board.

SOFTWARE REQUIREMENTS

Xedio Dispatcher has to be installed on a computer running Windows XP Pro SP3 32 bits or Windows 7 32 or 64 bits.

2.3 LICENSES

2.3.1 LICENSE CODES REQUIRED

The XSecure application needs to be installed on the workstation. All the following license codes (known as Xedio Dispatcher full option) must be requested to allow the use of Xedio Dispatcher, except the Audio Guide Track and RTProf Wizard which are optional.

License	Code	Description
Base Package	10	Base Package for Xedio Dispatcher
P2 Source	20	Access to A/V content on P2 support
XDCAM Source	30	Access to A/V content on XDCAM support
Storyboarding	40	Access to the Storyboarding (rough cut) module of Xedio Dispatcher
Audio Guide Track	41	Allows the creation of an Audio Guide Track over a storyboard
Export	50	Access to the Export Module of Xedio Dispatcher
RTProf Wizard	51	Allows the creation of a new export target profile (RTProf generator)
Logger	60	Access to the Logging (IPD Logs) module of Xedio Dispatcher
Transcoding	70	Access to the transcoding option for the export module. If not present, only smart rendering is allowed.

2.3.2 REQUESTING AND IMPORTING THE LICENSE KEYS

In the XSecure Manager application installed on the Xedio Dispatcher workstation, you need to click the **Request** button to generate an XML file. Email this XML file to the EVS support and ask for the Import Key file.

Once you have received the Import Key file, you need to select and import the file via the Import Key File button in XSecure Manager.

2.4 INSTALLATION PROCEDURE

A Setup wizard guides you through the installation of Xedio Dispatcher.

To install Xedio Dispatcher, proceed as follows:

- Copy the installation file FullxedioDispatcher_4.0x.xx.exe locally.
 This is the full installer file, which you need to use for a first installation. Use the xedioDispatcher_4.0x.xx.exe for upgrades.
- 2. Double-click on the installation file to launch the installation wizard
- 3. Click **Next** on the Welcome window.

4. Read the License agreement, click the I accept the agreement option and click Next.

5. Select the components you want to install and click Next.

6. Click Install on the Ready to Install window.

7. Click Finish.

When the application is installed, you need to restart the computer.

The Xedio Dispatcher installer will then perform some final installation steps before you can launch the application.

3. Configuration and Customization

3.1 EXPORT TARGET PROFILES

3.1.1 **DEFINITION**

An Export Target Profile (also called 'RTProf') is an .xml file that contains the definition for rendering the storyboard created in Xedio Dispatcher into a single file on a given destination or into a clip on a given EVS server.

The Export Target Profile mainly includes the definition of the destinations, and of the codecs in which the file or clip need to be generated.

The Export Target Profiles available in Xedio Dispatcher are stored in: C:\XedioDispatcherMS\Profiles\RTProf.

The Export Target Profiles can be defined and customized to your needs by the EVS Project Manager. However, you can also create your own Export Target profiles using the Target Wizard.

3.1.2 Creating your Own Export Target Profile

You can create an Export Target profile from the Export to Target tool in Xedio Dispatcher, by means of the Target wizard. This operation is explained in this chapter since it should be performed as you configure your application.

To create an Export Target Profile in Xedio Dispatcher, proceed as follows:

1. In Xedio Dispatcher, click the Export to Target tab in the Tools area:

2. In the Target field, click the down arrow and select <Create new target> from the list.

The New Target Creation wizard opens.

3. In the Target Type dialog box, select the types of targets you want to generate, either files stored on the network, or clips on EVS servers:

Click Next

4. The High Resolution File Creation dialog box is displayed if you have asked to generate hi-res files.

- o Specify the folder where the high resolution files will be stored, as well as the codec and format to be used to generate these files.
- o If you want to generate an EVS metadata file (XML file), that will contain the file definition and the custom metadata fields associated to the media/Storyboard, select the **Generate EVS metadata file** option. This metadata file will be stored in the same folder as the media file.

o If you select an Avid OPAtom format, the **Export to Avid (Interplay or AAF)** option appears. Select it if you want to export to Avid. Further configuration will be done in steps 10 and 11.

Click Next

5. The Proxy/LoRes File Creation dialog box is displayed if you have asked to generate lo-res files.

- Specify the same information for the low resolution files as for the highresolution file.
- o If you want the AutoFileImporter application (AFI) to scan the generated files and reference them in the Xedio database, select the **Reference Hi/Lo files to Xedio** option and specify the folder that AFI will have to scan to find the jobs to perform.

o If you select an Avid OPAtom format, the **Export to Avid (Interplay or AAF)** option appears. Select it if you want to export to Avid. Further configuration will be done in steps 10 and 11.

Click Next

6. The Export to EVS Video Server dialog box displays if you have asked to generate clips.

- Specify both IP addresses of the EVS video server, the codec used on the server, the FTP login and password, the default page on which the generated clip will be stored.
- o If you want to generate an EVS metadata file (XML file), that will contain the file definition, select the **Generate EVS metadata file** option, and specify the folder where the file should be stored.

Click Next.

7. If you have asked to use a second EVS server as backup, the Export to 2nd EVS Video Server dialog displays.

Provide the same information as for the main EVS server.

Click Next.

8. The File Name Properties dialog box displays.

- o Maximum filename length: maximum number of characters above which the filename will be truncated.
- o Force GUID: when this option is selected, a GUID will be incremented at the end of the filename.

Click Next.

9. The EVS Metadata Info dialog bog displays, if you have selected one of the Generate EVS metadata file options.

Asset Owner: specify the owner of the media/edit you will export as it will appear, for instance, in IPDirector.

 Bin Name: specify the name of the IPDirector bin where you want to send your material.

Click Next.

10. The Export Logsheet File dialog box displays.

- O Xedio Dispatcher can generate a log sheet (XML file) that will contain the log information available in the clip, sub-clip or storyboard exported. To this end, select the Generate Logsheet file option and specify the folder where to export this log sheet.
- If you have selected the export to AVID during steps 4 or 5, the Export Logs as locators to Avid option is displayed. By selecting this option, the locators will appear on-the-fly within Avid.

Note

If one of those options is selected, cut points will be exported as logs.

- Storyboard start timecode and storyboard end timecode are considered as cut points.
- Each cut point between the start and the end of the storyboard contains 2 logs: on for the IN point and one for the OUT point.

Click Next.

11. If you have selected the **export to AVID** during steps 4 or 5, the Export to Avid dialog box displays.

Select the export type you want to perform.

 If you want to export your storyboard to an Avid Interplay setup using WebServices, select Export to Avid Interplay (Web Services). During the export to Avid Interplay, users will be allowed to use the file being encoded.

The **Test** button can be used to check the connectivity with Avid WS host.

- o If you want to export your storyboard to an Avid setup using an AAF file, select **Export AAF File**. The AAF file will contain the reference to OPAtom files, specific metadata and locators.
- 12. In the next dialog box, specify the name for the Target Profile you have defined. This is the name that will be displayed in the **Target** field of the Export Tool in Xedio Dispatcher.

13. The last dialog box provides an overview on the target profile definition. You can still go back to a previous dialog box, and modify the target profile definition.

Click **Finish** to confirm the Target Profile Definition.

The target profile you have created is now available for use in the **Target** field of the Export to Target Tool in Xedio Dispatcher.

3.2 KEYWORD GRIDS

The keywords grids used in Xedio Dispatcher are stored as .xml files in C:\Program Files\EVS Broadcast Equipment\XedioDispatcher\Keyword Grids*.xml. They are compatible with IPDirector.

Drop the requested keyword grid files in the folder specified above and the name of the file will be displayed as the keyword grid name in the Logger tool of Xedio Dispatcher. The grid is directly available in Xedio Dispatcher.

3.3 METADATA PROFILE MANAGEMENT

3.3.1 Introduction

Metadata is customer-defined data which can be associated with media or edits to describe or classify them.

Metadata user fields can be created and associated into profiles within Xedio Dispatcher. Then, a metadata profile can be assigned to media or edits and metadata values specific to the media or edit can be entered in the user fields.

3.3.2 Profile Management

INTRODUCTION

The Metadata Profiles window allows you to define user fields and to associate them into profiles. You can access it via the menu Parameters > Metadata Profiles.

It is divided into three areas:

- 1. Available Metadata Fields
- 2. Metadata Profile Information
- 3. Existing Metadata Profiles

MANAGING USER FIELDS

How to Create User Fields

To create a user field, proceed as follows:

Click the Add New Field button in the Available Metadata Fields area.
 The Metadata Field dialog box opens:

2. Complete the following fields

Field	Description		
Field Name	Name you want to give to the user field.		
Туре	Six types of user fields are available. They will appear as follows in Xedio CleanEdit:		
	Boolean	True or False values.	
	Combo	Drop-down list of values defined at creation	
	Date	Date field with drop-down arrow giving access to a calendar.	
	Number	Number field with up and down arrows to increase or decrease the value.	
	Text	Free text field	
Timecode		Timecode field	
Default Values	Possibility to define a default value to be used for the user field. The default value is enabled when the Default Values button is surrounded by a colored line.		
Description	Optional text to describe the user field.		
Field Values (combo option)	Right-click in the field and select New to define a value for the drop-down list.		

3. Click the OK button.

How to Modify a User Field

To modify the properties of a user field, proceed as follows:

- 1. Select it in the list
- 2. Click the Modify Field button
- 3. Enter new values in the relevant fields
- 4. Click the OK button.

If the user field is used in a profile, only the **Label** and the **Description** fields can be edited.

A padlock icon indicates that the user field has been associated to a media/edit.

How to Delete a User Field

To delete a user field, proceed as follows:

- 1. Select it in the list
- 2. Click the Delete Field button.

It can only be deleted if it is not used in a profile.

MANAGING METADATA PROFILES

How to Create a Metadata Profile

To create a metadata profile, proceed as follows:

1. complete the following fields in the Metadata Profile Information area

Field	Description	
ID	Internal ID automatically filled by the system.	
GUID	Mandatory parameter pre-filled with a unique ID. This GUID is particularly important if the media/edit is exported with its custom metadata to IPDirector. Enter the same GUID for this metadata profile in Xedio Dispatcher as the matching metadata profile existing in IPDirector, so IPDirector will recognize the profile and not create a new one.	
Label	Name you give to the profile. Use the log sheet profile name existing in IPDirector if you want to export A/V Material with its metadata in IPDirector.	
Description	Optional text to describe the metadata profile.	

2. Select the list of user fields you want to use in the profile: select a user field

- in the Available Metadata Fields area and drag it to the Metadata Profile Information area.
- 3. Click the **Save Profile** button. The metadata profile will then be displayed in the Metadata Profiles area.

How to Modify a Metadata Profile

To modify a metadata profile, proceed as follows:

- 1. Select it in the Metadata Profiles area
- 2. Add user fields from the Available Metadata Fields area to the Metadata Profile Information area, or
 - select a user field in the Metadata Profile Information area and click the Remove Field from Profile button.
- 3. Click the Save Profile button.

It can only be edited if it is not selected for use in the Media or Edit Profile Association.

How to Delete a Metadata Profile

To delete a metadata profile, proceed as follows:

- 1. Select it in the Metadata Profiles area
- 2. Click the **Delete Profile** button in the Metadata Profile Information area.

It can only be deleted if it is not selected for use in the Media or Edit Profile Association.

3.3.3 Media Profile Association

The Media Metadata Profile Table Association window allows you to select the profiles you want to make available to the users.

You can access it via the menu Parameters > Media Metadata Profile Association.

The following fields are displayed in the window:

Field	Description	
Description	Automatically filled by the system for the selected profile with the description text entered at profile creation.	
Available	Displays the list of existing profiles available for selection.	
Selected	Displays the list of profiles which have been selected in the Available list and added thanks to the Add button. Profiles can be removed from the Selected list and be made available in the Available list again by using the Remove button.	
	Each user field from the selected profiles could be displayed in additional column in Media > Manager from the Xedio Manager and in the Media Manager tab from the Xedio CleanEdit.	

Field	Description	
Default Profile	Allows the selection of a profile, from the list of Selected Profiles, to be used as default profile when a user will associate metadata to a media.	

The Save button must be clicked to save changes.

3.3.4 EDIT PROFILE ASSOCIATION

The Edit Metadata Profile Table Association window allows you to select the profiles you want to make available to the users.

You can access it via the menu Parameters > Edit Metadata Profile Association.

The following fields are displayed in the window:

Field	Description		
Description	Automatically filled by the system for the selected profile with the description text entered at profile creation.		
Available	Displays the list of existing profiles available for selection.		

Field	Description	
Selected	Displays the list of profiles which have been selected in the Available list and added thanks to the Add button. Profiles can be removed from the Selected list and be made available in the Available list again by using the Remove button.	
	Each user field from the selected profiles could be displayed in additional column in Tools > Edits Manager from the Xedio Manager and in the Edit Manager tab from the Xedio CleanEdit.	
Default Profile	Allows the selection of a profile, from the list of Selected Profiles, to be used as default profile when a user will associate metadata to an edit.	

The Save button must be clicked to save changes.

3.4 CONFIGURATION PARAMETERS

3.4.1 PARAMETER PROFILES

Introduction

You can access the parameter profiles in Xedio Dispatcher, via the menu Parameters > Parameter Profiles.

The parameters that are not described below are not used in the current version of Xedio Dispatcher.

LIST OF <GENERAL> PARAMETERS

General		
Allows to backup EVS video server	When selected: the backup of EVS video server is allowed.	
Auto Refresh Filtering	When selected: each time a new criterion is added to a filter, the search is automatically started without pressing Return or clicking the Search button.	
Can select ClassList node	When selected: enables the selection of a class list node rather than only the deepest sub-items.	
Confirmation window to backup EVS video server	When selected: displays a confirmation window before the backup operation of an EVS video server.	

	General			
	Default video aspect ratio	Video Ratio used in thumbnail generation and during rendering operations.		
		Possible values: 4/3 or 16/9		
	Default high bitrate video width	Free text field to define the default horizontal resolution for hi-resolution video files (width in pixels)		
New!	Default Proxy Video Frequency	Default video frequency for Proxy video browsing, editing and encoding		
Newl	Default Proxy Video Resolution	Default video resolution for Proxy video browsing, editing and encoding		
	Default video standard	Video supported by the Dispatcher in the current session (You cannot mixed PAL and NTSC). This parameter is also used during rendering to upscale or not the media		
		Possible values: PAL SD, NTSC drop SD, HD 1080i @50, HD 720p @50, HD 1080i @59,94, HD 720p @59,94.		
	Default XT Growing Clip Duration	Field to define the default duration for XT growing clip.		
New!	Gop browsing accuracy for hi-res player	Defines the value under which the player display will be updated when browsing the nowline (ms).		
Newl	Gop browsing accuracy for lo-res player	Defines the value under which the player display will be updated when browsing the nowline (ms).		
	Grab Still Frame Folder	Field to define the default folder to store grab image file.		
	Grab Still Frame Prefix	Field to define the default prefix for the resulting grab image file.		
Newl	Notification Center IP address	Free text field to define the IP address of the notification center.		
New!	Notification center network port	Free text field to define the port number of the notification center.		
Newl	Odd frame clipping	When selected: enables clipping on odd frames when working with P resolution in all players and timelines.		
		Note This parameter should only be set for full progressive workflows.		
New!	Precise browsing accuracy for hi-res player	Defines the value under which the player display will be updated accurately when browsing the nowline (ms).		

General	
Precise browsing accuracy for lo-res player	Defines the value under which the player display will be updated accurately when browsing the nowline (ms).
XedioBroker IP address	Free text field to define the IP address of Xedio Broker.
XedioBroker network port	Free text field to define the port number of Xedio Broker.
XT Clip creation default clipname	Free text field to define the default clip name when creating an XT clip.
Audio	
Default Input Audio Track Assignment	Defines the default audio channel assignment for the imported media files.
	The field displays the assignments for 2, 4, 8 and 16 channels configurations separated by a ' ' sign.
	Refer to the section 'How to Define New Default Audio Channel Assignment' on page 25.
	Note Once the audio track assignment has been defined in Xedio Importer or AutoFile Importer, these values will be used instead of the default ones on the workstation.
Default Rendering Audio Track	Defines the default audio channel assignment for rendered files.
Assignment	The field displays the assignments for 2, 4, 8 and 16 channels configurations separated by a ' ' sign.

Refer to the section 'How to Define New Default Audio Channel Assignment' on page 25.

Default XT Input Audio Track Assignment

This parameter is not used in Xedio Dispatcher.

Enable 5.1 management

This parameter is not used in Xedio Dispatcher.

How to Define New Default Audio Channel Assignment

To define a new default audio channels assignment, right-click the Variant Value and select one of the options of the contextual menu.

- Source: when this option is selected, the audio track assignment from the source media will be used.
- Custom: this opens the Audio Track Assignment window from which you can

select the required number of channels and assign channels to tracks.

Automatic Restore	
Restore Type	Option list to select the restore type to be used for automatic restore process.
	Possible values:
	 Full Restore: restores the whole media
	 Partial Restore: restores only the useful section of the media used in the edit for which a restore is requested.

Import			
Imported FileName Format	Free text field to defin XDCAM import.	e the imported filename format fo	
	The following items can be used:		
	%LABEL	Label given by Xedio user	
	%NAME	Clip Name	
	%CLASSID	Class ID	
	%TCIN	Timecode IN	
	%TCOUT	Timecode OUT	
	%CLIPTYPE	Clip Type, e.g. DV_50i, P2HD_100i)	
	%USER	Xedio Username	
	%DURATION	Timecode Duration	
	%YEAR	Current Year	
	%MONTH	Current Month	
	%DAY	Current Day Number	
	%HOUR	Current Hour	
	%MIN	Current Minute	
	%SEC	Current Second	
	%MSEC	Current Millisecond	
	%SDYEAR	Shooting Date - Year	
	%SDMONTH	Shooting Date – Month Number	

Import		
	%SDDAY	Shooting Date – Day Number
	%GUID	Clip GUID
Use Long Clip Name	When selected: the long clip	name is used as media label.
Vumeter		
Bottom level of Vumeter	Field to define the db value of vu-meter bottom level. It is the audio level difference (in dB) compared the 0 level (audio level of the source media) and corresponding to the bottom of the green zone in the audio meters	
Saturation level of Vumeter	Field to define the db value of vu-meter saturation level. It is the audio level difference (in dB) compared to the 0 level (audio level of the source media) and corresponding to the bottom of the red zone in the audio meters	
Top level of Vumeter	Field to define the db value audio level (in dB) of the sor to the top of the red zone in	
Warning level of Vumeter	Field to define the db value This value corresponds to th area in the vu-meter.	

Note

The default values for audio vumeter levels differ in Xedio Dispatcher and in Final Cut Pro.

It is therefore normal to see the same media reaching the red zone in Xedio Dispatcher while it is still in the orange zone in FCP.

If you want to have the same audio meter display in both applications, you can match the audio meter default values in Xedio Dispatcher to the FCP values.

LIST OF MEDIA DISPATCHER PARAMETERS

General	
Check for missing hires files	When selected, checks for missing hi-res files in the edit timeline and displays a small yellow triangle over each missing clip in the timeline.
Default clip export string format	Free text field to define the name of clip object dropped in the Export Tool area.
Default edit export string format	Free text field to define the name of edit object dropped in the Export Tool area.
Default media export string format	Free text field to define the name of media object dropped in the Export Tool area.
EVS Server Ganging Type	Field to enter a value corresponding to a camera ganging type. 0: XT input cameras 1: IPDirector metadata 2: mixed (first tries IPD metadata then XT input cams)
External Cue Point – Ranking 0 Color	Color used, in the media bar of the Player, to represent a log with the default ranking assigned
External Cue Point – Ranking * Color	Color used, in the media bar of the Player, to represent a log with a ranking * assigned
External Cue Point – Ranking ** Color	Color used, in the media bar of the Player, to represent a log with a ranking ** assigned
External Cue Point – Ranking *** Color	Color used, in the media bar of the Player, to represent a log with a ranking *** assigned
ThumbnailWidth	Width used for new thumbnails (Height is found according to the 4/3 ratio)
User Cue Point Color	Color used, in the media bar of the Player, to represent a

Cefiltermgr Allow Change Edit Properties When selected: allows the user to change edit properties in the Storyboard Properties window. Allow Change Media Properties window. When selected: allows the user to change media properties in Media Properties window. Max Date Interval Field to define the maximum date interval, in days, which can be used when a search filter is applied on a date parameter (0 = no limit).

log entered by the logged user.

	1	di	3	٧	v	
١						

Cefiltermgr	
Max Result Set Size	Field to define the maximum number of items which wi be displayed in the Elements grid after a search filter ha been applied (0 = no limit).
Recent Date List	Free text field to define the dates to be displayed i 'recent dates' drop-down lists.
Cemediaimport	
Audio Track Assignment Dialog	When selected: Enables the display of audio track assignment dialog tab in the Setup window during an import.
Automatic Device Scan	When selected: Automatically scans devices at start up.
Canon	When selected: Allows import from Canon device.
Kmt	When selected: Allows import of RTD files
P2	When selected: Allows import of files with P2 format
PlayXTClip	When selected: Allows server clip to be viewed in a player
PlayXTTrain	When selected: Allows server train to be viewed in a player
Stills	When selected: Allows import of image (stills files)
Stills Keys	When selected: Allows import of stills with key files
Video	When selected: Allows import of video files
Wave	When selected: Allows import of files with wave format
XDCam	When selected: Allows import of files with XDCam format
XDCamEX	When selected: Allows import from XDCamEX device
XT	When selected: Allows import of server clips
Cerendering2	
Available XTNr	Free text field to enter a comma-separated list of numbers for available EVS video server. If the field is le empty, all numbers between 1 and 30 are allowed.
ld RTProf Agent	Field to enter the DB ID of RTProf agent. If the field is set to 0, the first available agent with a name containing 'RTProfAgent' is fetched from DB.

Comom de sisse a		
Cerendering2		
ld Shell Agent	Field to enter the DB Id of Shell agent. If the field is set to 0, the first available agent with a name containing 'ShellAgent' is fetched from DB.	
Id To XT Agent	Field to enter the DB Id of ToXT agent. If the field is set to 0, the first available agent with a name containing 'ToXTAgent' is fetched from DB	
Show To CleanEdit	When selected: shows the 'To CleanEdit' TAB	
Show To Device	When selected: shows the 'To Device' TAB	
Show To File	When selected: shows the 'To File' TAB	
Show To Target	When selected: shows the 'To Target' TAB	
Db Maintenance		
BackupFilename	Backup prefix name of the Xedio Dispatcher DB	
BackupFolder	Location where the backup operations save backup files	
CheckDB	Checks DB during maintenance operation	
DaysBeforeDBMainten ance	Delay between two DB maintenances	
GenerateBackup	Generates Xedio Dispatcher DB backup during maintenance operation	
PurgeBackupFiles	Purges previous Xedio Dispatcher DB backup during maintenance operation	
PurgeBackupHistory	Purges history from Xedio Dispatcher DB backup during maintenance operation	
ReorganizeIndex	Re-indexes table from Xedio Dispatcher DB during maintenance operation	
ShrinkDB	Shrinks Xedio Dispatcher DB during maintenance operation	
DeviceFilter		
AllowCDRom	When selected: Allows scanning CDRoms to find media. This parameter needs to be active for XDCAM disk access.	
AllowFixedDrive	When selected: Allows scanning local hard disks to find media	

DeviceFilter	
AllowRamDisk	When selected: Allows scanning Ram disks to find media
AllowRemoteDrive	When selected: Allows scanning network drives to find media
AllowRemovableDrive	When selected: Allows scanning USB drives to find media
AllowToChangeExtens ions	When selected: Allows to change the list of default file extensions supported during the media referencing from a drive. Change is possible from the drive creation window or the drive edit window.
DaysBeforeMediaPurg e	Delay between two unused media purge
DelayBetweenVolume Check	Time in seconds between automatic rescan on removable disk if there is a change
Extensions	List of default file extensions supported by Xedio Dispatcher during the media referencing from a drive. This parameter is used as default value during the drive creation.
MaxDepth	Number of directory levels checked when scanning for media.
MediaClassId	Class ID assigned to the media during its referencing in Xedio Dispatcher.
MediaDescription	Default text to describe the media and assigned to the media during its referencing in Xedio Dispatcher.
MediaExternalRef	Default text for the external reference of the source support assigned to the media during its referencing in Xedio Dispatcher.
MediaGlobalShooting Date	The global shooting date is assigned to the media during its referencing in Xedio Dispatcher.
	This parameter is a numeric value to define how the global shooting date is assigned:
	Possible values:
	 0: date retrieved from the XML file and corresponding to the date when the media was recorded by the camera.
	 >0: date provided by the application .and corresponding to the date when the media was referenced in Xedio Dispatcher.
Medialabel	Default name assigned to. the media during its referencing in Xedio Dispatcher.
MediaMetadataXML	This field is left empty by default.

Logger	
KeywordGridFolder	Folder where Xedio Dispatcher looks for Keyword grids. Default value: C:\Program Files\EVS Broadcast Equipment\XedioDispatcher\Keyword Grid\
Media List	
MaxResultSelSize	Field to define the maximum number of items which will be displayed in the Elements grid after (0 = no limit).
Player	
Auto Clip IN	This parameter will be used in future version.
	Amount of fields before the entry point of a clip when using the auto-clipping tool (Alt+Space bar).
Auto Clip OUT	This parameter will be used in future version.
	Amount of fields after the out point of a clip when using the auto-clipping tool (Alt+Space bar).
EnableDeinterlaceMen u	When working in HiRes, enable the deinterlace menu when right clicking over player
JogAudioThresholdHI	Maximum playing speed, in hi-res, above which the audio will no longer be audible
JogAudioThresholdLO	Maximum playing speed, in lo-res, above which the audio will no longer be audible.
JogRangeHI	Jog Range in HiRes (from -1.0 to 1.0)
JogRangeLO	Jog Range in LoRes (from -2.0 to 2.0)
PrevNextX	Field to enter the number of fields to jump when Alt key is used with Prev and Next buttons.
ShiftSpeedMax	Field to enter the speed rate for super fast forward and rewind tools when used together with the Shift key.
SpeedMax	Field to enter the speed rate for fast forward and fast rewind tools.
XT Clip Creation Time Tolerance	Field to enter the tolerance value (in seconds) towards the creation time between two sibling XT clips.
XT Stream Creation Time Tolerance	Field to enter the tolerance value (in seconds) towards the creation time between two sibling streams.

-	
Player	
XT Train Only View Enable	When selected: the clip creation on XT train is disabled.
Storyboard	
AllowAudioGuideTrack	Enables the Audio Guide Track feature. If this parameter is active and if the required license key is installed in XSecure, the Audio Guide Track button will be available in the Storyboard Player.
AudioGuideTrackOutp ut	Stereo output for Audio Guide Track
AudioGuideTrackPreR oll	Countdown in milliseconds before starting the record process
AutomaticSaveTime	Delay (in seconds) between two storyboard saves
Workspace	
AllowMatchFrame	Allows the Match Frame feature (toggle from edit to media): If this is active, the Match Frame button is available in the Storyboard Player

HOW TO EDIT A PARAMETER PROFILE

To edit the parameters values of a profile, proceed as follows:

- 1. In the Application Selection area, select the application in which a parameter profile should be edited.
- 2. Select the profile in the Profile Selection area.
- 3. In the Parameters area, edit the desired parameters in the Variant Values column
 - by selecting or clearing the box corresponding to a parameter (check box)
 - by adding the required value (field to enter a value)
 - by selecting the required value (option list)
 - by defining it in a specific window for a name format string (see section 'How to Modify a Name Format String', on page 34.

The default values can be changed by editing the <default> profile.

4. Click the Save button to save the selected profile.

A dialogue box will show a successful update.

HOW TO MODIFY A NAME FORMAT STRING

To modify a name format string, proceed as follows:

1. In the Parameters area, double-click the parameter in the Variant Value column.

The [Item] Auto Name window opens:

- 2. In the first (name) field, delete the part of the string you do not want to keep in the name, if any.
- 3. To add a generic text (i.e.: WC2006_Match03...) in the Filename string, simply type the text in the field.
- 4. To add an information type specified in the **Available Items** list, click the arrow next to the field and select the item in the drop-down list:

- 5. Click the **Append** button to add the selected item at the end of the Name string.
- 6. Reposition the available item as desired with the cut (CTRL-C) and paste (CTRL-V) commands.
- 7. Repeat step 4 to 6 for any new information type you want to add in the Filename string.
- 8. You can reset the default name by clicking the Reset button.

3.4.2 KEYBOARD PROFILES

INTRODUCTION

You can access the keyboard profiles in Xedio Dispatcher, via the menu ${\bf Parameters} > {\bf Keyboard\ Profiles}.$

LIST OF MEDIA DISPATCHER KEYBOARD KEYS ASSIGNMENTS

General	
Player Focus	Sets focus on Clip Player window
Player Full Screen	Zoom Clip Player window to full screen
Recorder Focus	Sets focus on Storyboard Player window
Recorder Full Screen	Zoom Storyboard Player window to full screen

Cemd_storyboard	
Delete Edit Clip	Deletes the selected edit clip
Delete Storyboard	Deletes the storyboard
End Edit Clip	Jumps to the last edit clip of the open storyboard
End Storyboard	Jumps to the last storyboard
Home Edit Clip	Jumps to the first edit clip of the open storyboard
Home Storyboard	Jumps to the first storyboard
Next Edit Clip	Jumps to the next edit clip of the open storyboard
Next Storyboard	Jumps to the next storyboard
Previous Edit Clip	Jumps to the previous edit clip of the open storyboard
Previous Storyboard	Jumps to the previous storyboard
Select all edit clips	Selects all the edit clips from the open storyboard

Exporttool		
Delete	Deletes the selected clip	

Player	
Auto Aspect Ratio	Automatically applies the default aspect ratio
AutoClip	Creates a quick clip with properties set in the profile
Drop In	Drops the clip, defined in the player, after the storyboar IN point
Drop NowLine	Drops the clip, defined in the player, into the storyboard.
Drop Out	Drops the clip, defined in the player, before th storyboard OUT point

4. User Interface

4.1 STARTING XEDIO DISPATCHER

To start Xedio Dispatcher, select the Xedio Dispatcher application via the menu Start > All Programs > EVS Broadcast Equipment > Xedio Dispatcher > Xedio Dispatcher OR double-click the Xedio Dispatcher shortcut on the desktop:

4.2 OVERVIEW

The Xedio Dispatcher user interface consists of several areas, besides the Menu bar. They are highlighted on the following screenshot and shortly described in the table below.

Note

The color of some user interface elements may vary with the Xedio skin installed.

Area Description

1. **Menu bar** The menu bar gives access to general commands and to configuration parameters.

See also the section 4.3 'Menu Bar', on page 45.

2. Source Device

This area displays the plugged-in devices and the media that has been automatically detected on the devices, as well as media from drives and folders which have been scanned by the users.

See also the section 4.4 'Source Device Area', on page 47.

3. Workspace

This is the working area where you mainly perform the following actions:

- Searching for the requested clips, potentially by applying search filters.
- Loading, playing and editing the source clips to create sub-clips that will be added to a storyboard.

 Loading and playing the final storyboard to check it before export. See also the section 4.5 'Workspace Area', on page 48. Tools This area contains several horizontal tabs that provide the following tools: Logger tool: It allows the selection of keywords from keyword grids and the selection of a ranking level to associate to a log. Export tool: It allows the export of clips, sub-clips or storyboards to a Target (based on the settings defined in a selected target profile), to a File or to a Device. See also the section 4.6 'Tools area', on page 57. Storyboard This is the area where you create and manage your storyboards. It displays: The storyboards as individual tabs. The thumbnails of the clips included in the open storyboard. See also the section 4.7 'Storyboard area', on page 66. 			
 Tools This area contains several horizontal tabs that provide the following tools: • Logger tool: It allows the selection of keywords from keyword grids and the selection of a ranking level to associate to a log. • Export tool: It allows the export of clips, sub-clips or storyboards to a Target (based on the settings defined in a selected target profile), to a File or to a Device. See also the section 4.6 'Tools area', on page 57. 5. Storyboard This is the area where you create and manage your storyboards. It displays: • The storyboards as individual tabs. • The thumbnails of the clips included in the open storyboard.

4.3 MENU BAR

The Menu bar gives access to the following commands:

Menu item	Description
File	
Exit	Closes Xedio Dispatcher
View	
Status Bar	Displays/hides the status bar at the bottom of the window
Help	
About	Provides information on the application version, the support phone number, etc.
Parameters	
Parameter Profiles	Opens the Parameter Profiles window where you can modify the various parameters of Xedio Dispatcher.
	For more information on the parameters, refer to the section 3.3 'Metadata Profile Management' on page 17.
Metadata Profiles	Opens the Metadata Profiles window from which you can manage the creation of metadata fields and their association into metadata profiles.
Media Metadata Profile Association	Allows the selection of metadata profiles to be available for association with media.
Edit Metadata Profile Association	Allows the selection of metadata profiles to be available for association with an edit (storyboard).
Keyboard Profiles	Opens the Keyboard Profiles window where you can customize the keyboard shortcuts.
	To modify a keyboard shortcut, double-click the keyboard shortcut in the Variant Keyboard Function column, type the requested keyboard shortcut, and click \mathbf{OK} .
Maintenance	
Database Cleanup	Opens the Database Cleanup window where you can clean all DB tables, delete thumbnails, and audio guide track in a single operation.
	To clean the Xedio Dispatcher database, select the check box in the Cleanup Operations zone and click Start .
	To leave the window without cleaning the database, click $\mathbf{OK}.$

Menu item	Description	
Help		
About	Gives information about the system, such as version number.	

4.4 SOURCE DEVICE AREA

4.4.1 Introduction

When you open Xedio Dispatcher, the application automatically detects the plugged-in SD or HD devices (CANON, P2, XDCAM or XDCAM EX supports), and searches for media present on these supports.

USB devices and XF drives can be scanned, so their content is available for browsing, logging, rough-cut and export.

4.4.2 GENERAL DESCRIPTION

The Source Device area displays:

- the identified devices as the root branches of an expandable tree view and the detected media below the device on which it is stored. The path where the media is located is specified.
- the folders scanned by users and their subfolders.

The check-boxes are used to specify the media to be displayed in the Thumbnail view and in the List view of the Workspace. See also 5.3 'Selecting Relevant Media', on page 83.

4.5 WORKSPACE AREA

4.5.1 Introduction

In the Workspace area, you will list, apply filters, browse and edit the media using one of the four possible views.

The user interface elements in the Workspace area differ depending on the view mode.

4.5.2 VIEW MODES IN THE WORKSPACE

You can select the requested view by clicking one of the view buttons at the bottom of the Workspace area:

View	Description	
Thumbnail view	The Thumbnail view shows the thumbnails corresponding to the various source clips of the media selected in the Source Device area.	
List view	The List view displays the list of source clips from the media selected in the Source Device area and gives access to the different filters which can be applied to restrict the list of clips displayed.	
Clip Player view	The Clip Player view allows playing source clips.	
Storyboard Player view	The Storyboard Player view allows playing the final storyboards, as well as recording audio guide tracks.	

4.5.3 THUMBNAIL VIEW IN THE WORKSPACE AREA

PURPOSE

You will work in this view to select the cameras source clips you want to use to create storyboard elements.

OVERVIEW

The Thumbnail view shows the thumbnails corresponding to the various source clips of the media selected in the Source Device area:

For each clip, the following metadata is displayed:

- the clip name (above the thumbnail)
- the TC IN, TC OUT, and duration of the clip in the source media (below the thumbnail)

Double-clicking a thumbnail opens the corresponding clip in the Clip Player view.

SELECTING TECHNIQUES

Several source clips can be selected to move them at once to a storyboard or to on export list. You can select them thanks to the usual commands:

- Press CTRL + click on the items for a selection of multiple non-contiguous items.
- Press **SHIFT** + click on the first and last item for a selection of multiple contiguous items.
- Press CTRL + A to select all the items from the thumbnail view.

THUMBNAIL CONTEXTUAL MENU

A contextual menu is available when you right-click on a thumbnail:

Menu Item	Description
Play	Loads the clip in the Clip Player window to allow the clip to be browsed.
Change Properties	Opens the Media Properties window which shows the properties for the selected clip. If a default metadata profile has been defined for the media, a metadata tab is displayed and allows the users to modify the clip metadata values. See section 3.3.3 'Media Profile Association' on page 21 for more information on the selection of a profile. As the Media Properties window is similar to the Edit Properties window, refer to section 5.2.1 'How to Create an Empty Storyboard' on page 79 for a description of the window.
	The Allow Change Media Properties option must have been selected from Parameters > Parameters ProfilesMedia Dispatcher > Cefiltermgr to allow the display and update of Custom Metadata.

4.5.4 LIST VIEW IN THE WORKSPACE AREA

Purpose

You will preferably use this view to see the clips metadata when you work with drives / folders in the Device area.

OVERVIEW

The List view displays the list of all clips present in the selected media, and their associated metadata. Different filers can be applied to restrict the list.

The following table provides a short description of the various areas highlighted in the List view. You will find more detailed information on the List view in the section 5.3.3 'Searching for Clips within the List View', on page 85.

User Interface Element	Description	See also
1. Search Tools	Provides a Quick Text Search field and Advanced Filters fields to restrict the list to specific data.	Section 5.3.3 (pp.86 and 87)
2. Saved Filters Tabs	Allows to save filters and to apply them later on.	Section 5.3.3 (p.93)
3. Elements Grid	Displays the list of clips corresponding to the selected source in the Device area, or returns the result of a search applied to the list.	Next 2 sections

DISPLAYED COLUMNS

It is possible to re-arrange the columns order, and to add or remove some columns.

Right-clicking on any of the column headings displays a contextual menu. The **Choose Displayed Columns** option opens the Select Visible Columns window allowing you to choose the columns you want to be displayed in the Elements grid.

The column width and order can be adjusted using standard computer commands and drag and drop techniques.

ELEMENTS GRID CONTEXTUAL MENU

A contextual menu is available when you right-click on an item in the list:

Menu Item	Description
Play	Loads the clip in the Clip Player window to allow the clip to be browsed.
Render List	Opens the Render List window listing all types of rendering that have been done with the <u>clip</u> .
Archive History	Opens the Archive History window listing the archive and restore processes that were achieved for the selected clip.
View Properties	Opens the Media Properties window which shows the properties for the selected clip. If a default metadata profile has been defined for the media, a metadata tab is displayed and allows the users to modify the clip metadata values. See section 3.3.3 'Media Profile Association' on page 21 for more information on the selection of a profile. As the Media Properties window is similar to the Edit Properties window, refer to section 5.2.1 'How to Create an Empty Storyboard' on page 79 for a description of the window. The Allow Change Media Properties option must have been selected from Parameters > Parameters ProfilesMedia Dispatcher > Cefiltermgr to allow the

Menu Item Description

display and update of Custom Metadata.

4.5.5 CLIP PLAYER VIEW IN THE WORKSPACE AREA

PURPOSE

You will work in this view to perform the following actions:

- Playing the source clips displayed in the thumbnail view or corresponding to a storyboard element.
- Preparing sub-clips to be added to the storyboard.

OVERVIEW

The Clip Player view mainly consists of a media player and associated commands, and is similar to the players used in the Xedio suite:

The following table provides a short description of the various areas highlighted in

the Clip Player view. You will find more detailed information on the Clip Player in the section 4.8 'Clip Player and Storyboard Player', on page 67.

User Interface Element	Description	See also
1. Video Display & Audio Meters	It displays the media loaded on the Player. Parameters related to the display are available via a contextual menu.	Section 4.8.2 (p.67)
	The audio meters show the levels of the various audio tracks of the clip that is being played.	
2. Track Selection buttons	The Track Selection buttons (little camera and triangle buttons) allow you to select the video and audio channels you want to include in the clip/sub-clip you will place into the storyboard.	Section 4.8.3 (p.68)
	The radio buttons displayed next to audio channel buttons allow you to select which audio track you want to monitor when you play the loaded clip in the Clip Player.	
3. Jog and Media bar	The jog bar allows you to move within the media at a variable speed.	Section 4.8.4 (p.70)
	The Media bar represents the clip currently loaded on the Player:	
	 If the source clip is loaded on the Player from the thumbnail view, the IN and OUT points initially displayed are the ones of the source clip. 	
	• If the source clip of a storyboard element is loaded on the Player, the IN and OUT points initially displayed are the ones of the storyboard element.	
4. Editing and Transport commands/fields	The editing and transport buttons mainly allow you to perform the following actions:	Section 4.8.5 (p.72)
	• Browse in and play the source clip loaded on the player.	
	 Mark the IN and OUT points of the storyboard element before you place it into the storyboard. 	Section 4.8.6 (p.77)
	• Navigate between the logs created on the clip loaded in the player.	Section 4.8.7 (p.78).
5. View Mode buttons	These buttons allow you to change the View mode in the Workspace.	Section 4.5.2 (p.48).
6. Next/Previous Clip buttons	These buttons allow you to move to the next or previous clip available in the Thumbnail view.	

4.5.6 STORYBOARD PLAYER VIEW IN THE WORKSPACE AREA

PURPOSE

You will work in this view to perform the following actions:

- Play a storyboard to see the final result before exporting it.
- Add an audio guide track over the storyboard.

OVERVIEW

The following table provides a short description on the various areas highlighted in the Storyboard Player view. You will find more detailed information in the section 4.8 'Clip Player and Storyboard Player', on page 67:

User Interface Element	Description	See also the
1. Video Display & Audio Meters	It displays the video material loaded on the Player. Parameters related to the display are available via a contextual menu.	Section 4.8.2 (p.67)
	The audio meters show the levels of the various audio tracks of the clip that is being played.

	The Media bar represents the whole storyboard currently loaded on the Player.	
	For more information on the job and media bars, refer to the section 4.8.4 'Jog & Media Bars', on page 70.	
4. Transport commands	Allow you to do the following actions:Browse in and play the loaded storyboard.	Section 4.8.5 (p.75)
	 Navigate among the logs displayed on the loaded storyboard. 	
5. Audio Guide Track Record button	Allows you to add voice-over on the storyboard.	Section 5.7 (p.103)
6. View Mode buttons	Allow changing the View mode in the Workspace.	Section 4.5.2 (p. 48)
7. Next/Previous Storyboard buttons	Allow moving to the next or previous storyboard available in the Storyboard area.	
8. Go to Match Frame button	Allows loading the source clip of the loaded storyboard element and position on the current frame.	

4.6 TOOLS AREA

4.6.1 Accessing the Tabs in the Tools Area

The Tools area contains several tabs that are organized horizontally: one Logger tab, to create logs and associated metadata, and three Export tabs, to export media to various destination types. Click one of the Tools tab to expand it.

4.6.2 LOGGER

INTRODUCTION

From the Logger panel, you will be able to create a log. But you will also use it to add metadata to logs, such as free text description, keywords and/or ranking.

When you open Xedio Dispatcher, the application checks for keyword grids stored as .Xml files in C:\Program Files\EVS Broadcast Equipment\XedioDispatcher\Keyword Grids. The detected grids are automatically loaded and available in the Logger tab.

OVERVIEW

The Logger tab displays differently depending on whether keyword grids have been detected or not. The user interface consists of various areas highlighted on the following screenshots and shortly described in the table below.

Logger without Associated Keyword Grids

Logger with Associated Keyword Grids

The following table provides a short description on the various areas highlighted in the Logger tab. You will find more detailed information in the section 5.6 'Adding Logs to a Clip', on page 99.

User Interface Element	Description
1. Keyword Grid Selection Field	This field is only present if keyword grids are stored as .xml files in c:\Program Files\EVS Broadcast Equipment\XedioDispatcher\Keyword Grids.
	This field provides the list of keyword grids from which you can select the one you want to use.
2. Keyword Grid	Once a keyword grid has been selected, it opens in the Keyword Grid area. If the keywords cannot be displayed in one page, the pages are displayed as tabs.

User Interface Element	Description
	If no keyword grid is stored as .xml file in C:\Program Files\EVS Broadcast Equipment\XedioDispatcher\Keyword Grids, this area is not available.
3. Ranking Buttons	Buttons that allows you to assign a ranking to the log, in order to highlight important moments in the clip.
	The log will have a different color depending on the ranking assigned.
4. Delete Log Button	Button that allows you to delete the log on which you are positioned in the loaded clip, with all related keywords and ranking information.
5. Free Text Field	Field that allows the users to enter and assign free text to a log.

4.6.3 EXPORT TOOLS

Introduction

The Export Tool is the panel where:

- you select the export type: to Target, to File or to Device
- you select the export settings (target profile, transcoding codec,...) you want to use during the export process.
- you create a new target using the Target wizard for the Export to Target
- you prepare and execute the export of storyboards, but also source clips, or sub-clips.

You will find more detailed information in the section 5.9 'Exporting the Storyboard', on page 105.

EXPORT TO TARGET TAB

Overview of the Export to Target Tab

The Export to Target tab contains several main areas highlighted on the following screenshot and shortly described in the table below.

Area	1	Description	
1.	1. Target Selection field	Drop-down field from which you can select the target profile you want to use or create a new one.	
	See section 3.1 'Export Target Profiles' on page 9.		
2.	List of export jobs	List of storyboards, or clips, that have been added to the export list in the current session, whether they have already been exported or not.	
		See section 'Export Job Status' on page 61 for details on the export job status display.	
3.	Start button	Starts the export process for the storyboards and clips that are in the list and have not been exported yet.	
	Cancel button	Cancels the export process. Already finalized exports will not be canceled.	
4.	Clear List button	Clears the export list. The application asks you to confirm this action.	
		It does not clear the output of export jobs stored on the various destination folders.	

Export Job Status

 When the storyboard has not been exported yet, the progress bar shows 0 and the background is light grey:

 When the storyboard is being exported, the progress of the export job is displayed in the List of export jobs:

 When the storyboard has been successfully exported, the progress bar displays OK and the background is green:

 When the storyboard has not been successfully exported, the progress bar displays an error message and the background is blue:

• When the Export job has been cancelled, the progress bar displays Cancelled and the background is red:

EXPORT TO FILE TAB AND EXPORT TO DEVICE TAB

Overview of the Export to File Tab and Export to Device Tab

The Export to File tab and the Export to Device tab contain several main areas highlighted on the following screenshots and shortly described in the table below.

Export to File Tab

Export to Device Tab

Area		Description	
1.	Information zone	This area displays read-only general details on the storyboard or clip (like type, label, creation date, TC IN, duration).	
2.	Destination zone	This area is used to define settings of the exported file, such as a label, a destination folder and a transcoding codec. See section 'Destination Zone' on page 64.	
3.	Export Information zone	This area provides information on the progress of the export process. See section 'Export Information Zone' on page 65.	
4.	Start button	Starts the export process for the selected storyboard or clip.	
	Cancel button	Cancels the export process. Already finalized exports will not be canceled.	

Destination Zone

Exporting to a File

To export a storyboard or a clip to a file that can be read by an external system, complete the following fields before clicking the **Start** button.

Field	Description		
Label	Name you give to the exported storyboard/clip (mandatory).		
Folder	Destination folder where you want to export the storyboard/clip to.		
Transcoding Codec	Codec profile, which will determine the final format of the storyboard/clip in the destination folder.		
Additional Parameters	This window can be reached by clicking the button in the Transcoding Codec zone.		
	Additional Params X		
	umlD: Ok		
	ClipName : Cancel		
	Keyword1:		
	Keyword2 :		
	Keyword3:		
	VarID:		
	This allows you to specify parameters for the new file, such as name, keywords, UmID or VarID.		
Rendering from Low-res	When selected, the edit is rendered from the low-res file. This can save some time.		

Exporting to Device

To export an storyboard/clip to an external device, such as a XDCAM disk, a SxS card or a P2 card,

- select the device type: XDCAM, SxS or P2.
- complete the fields described in the table below
- click on the Start button.

Field	Description		
Label	Name you give to the exported storyboard/clip (mandatory).		
Local Drive	Location where the storyboard/clip will be sent to.		
Transcoding Codec	Codec profile, which will determine the final format of the storyboard/clip in the destination folder.		
	The available codecs depend on the type of device selected.		

Field Description

Additional Parameters

This window can be reached by clicking the button in the Transcoding Codec zone.

This allows you to specify parameters for the new file, such as clip name, keywords, UmID or VarID.

Export Information Zone

From this zone, the following settings are available:

Item Description Start Timecode You can specify the storyboard/clip timecode from which the export process will begin. Enable Video View When selected, a small video view is displayed during the export process:

🔽 Enable video view

4.7 STORYBOARD AREA

4.7.1 OVERVIEW

In the Storyboard area, you can see all storyboards you have created in Xedio Dispatcher. Each storyboard is displayed as a tab (1) named according to the storyboard name.

When you click the tab corresponding to a storyboard, the storyboard opens: the tab name becomes underlined, and the storyboard clips (2) are displayed as thumbnails in the tab.

You can play the storyboard in the Storyboard Player view. For more information, refer to the section 5.8 'Checking the Storyboard', on page 104.

Other actions on the storyboard are managed via the contextual menus, from the Workspace area, Export tool or Logger tool.

4.7.2 CONTEXTUAL MENU

The Storyboard contextual menu is available when you right-click the storyboard tab. Refer to section 5.2.2 'Other Possible Actions on Storyboards', on page 82 for a description of the available options.

4.8 CLIP PLAYER AND STORYBOARD PLAYER

4.8.1 OVERVIEW

This section describes in details the elements of the user interface specific to the Clip Player available in the Workspace area. The Clip Player is accessible via the

The Storyboard player shares many user interface elements with the Clip Player. For this reason, the section will also deal with the elements which are common to both players, and specific to the Storyboard Player. The Storyboard Player is

accessible via the Storyboard Player button

4.8.2 VIDEO DISPLAY

INTRODUCTION

The video display is common to the Clip Player and Storyboard Player.

ADJUSTING THE PLAYER VIDEO DISPLAY

You can adjust the Player video display via a contextual menu. You call the contextual menu by right-clicking the Video Display zone on the Player area.

It gives the following display options for the video:

Field	Description	
Show Timecode	This option offers different choices to display timecode on the player window.	
	 none – does not display any timecode 	
	 intra TC – displays the original timecode of the media 	
	 start TC - displays a counter starting with 0 at the first frame of the media 	
	 both (Intra TC - Start TC) - displays both the counter and original timecode 	
Aspect Ratio	Offers a choice of aspect ratios for the display either Auto, 4:3 or 16:9.	
	This is also possible to use the following shortcuts:	
	• Ctrl + A to toggle between 4:3 and 16:9	

Field	Description	
	• Alt A to reset the display to 'Auto'	
Show Safe Areas	Displays a safe area cage on the window to determine which areas of the picture will be seen and allow for checking the size of graphics within the media for safe display.	
Grab Image	Grabs the current image, either in low resolution or in high resolution. The default folder (c:\) where the grab is stored is defined via the menu Parameters > Parameters Profiles: General, General tab: GrabStillFrameFolder parameter.	
Show Label	Displays the clip name or the storyboard name over the Video Display.	

MAKING THE PLAYER AREA FULL SCREEN

To view the Player area as a full-screen image, press **F9** on the keyboard. Press again **F9** to revert to the normal display.

4.8.3 AUDIO/VIDEO TRACK SELECTION AND MONITORING

PLAYER TRACK SELECTION BUTTONS

Overview of the Track Selection

All the available audio sources from a media are displayed below the Video Display Clip Player. The Track Selection buttons are specific to the Clip Player.

When you create a sub-clip, you need to select the video and requested audio tracks using the buttons underneath the Video Display zone:

Video and Audio Selection

The channel selection (camera and triangle buttons) allows you to select the video and audio channels you want to include in the clip/sub-clip you will add to the storyboard.

Clicking on the Video button will remove the video from the Player window and disable it so that the clip made has no video: The displayed button will turn to white.

Clicking on the left or right triangle of an audio stereo track will disable respectively the left or right channel of the corresponding audio track: The displayed button will turn to white.

The table summarizes how the buttons look like depending on the selection:

	Enabled	Disabled
Video		
Audio	D 🔘 0	D (

Audio Monitoring Selection

The radio buttons displayed between each pair of stereo audio channel buttons allow you to select which audio track you want to monitor when you play the loaded clip in the Clip Player.

Audio meters located on the right side of the Video Display represent the monitored track.

Db values are displayed on each side. They correspond to the values defined in Parameters > Parameter Profiles > General > Vumeter for the top level, the saturation level, the warning level and the bottom level. Values for 0, -2, -4, -8 and -16 are shown as well if they do not overwrite the database values.

Examples

If a sub-clip has to be created without audio for the channels 1 and 2, disable the 2 buttons of those channels:

Clicking on the left audio button will remove the left audio component from the source so that the clip made has no left audio channel. In this case, the right channel will be output on the left and right.

Clicking in addition on the right audio button will remove the right audio component so that the clip made has no right audio channel.

STORYBOARD AUDIO TRACK BUTTONS

Audio Track Monitoring Buttons

The Audio Track Monitoring buttons are specific to the Storyboard Player.

The radio buttons below the video display allow you to select the audio track you want to monitor.

Audio Guide Track Record Button

The Audio Guide Track Record button is specific to the Storyboard Player.

The **Audio Guide Track Record** button allows you to record a voice-over sequence on one track of the storyboard.

You can only record one audio guide track for one storyboard. Once the audio guide track has been created, you cannot modify it. If you want to change it, you need to delete it and record a new one.

For more information on how to record an Audio Guide track, refer to the section 5.7 'Recording an Audio Guide Track', on page 103.

4.8.4 Jog & Media Bars

INTRODUCTION

The Jog and Media bars, as well as the nowline, mark IN and mark OUT points are common both to the Clip Player and Storyboard Player.

Jog

Dragging the jog bar allows you to move within the media at a variable speed depending on:

- the position of the speed indicator
- the speed range covered by the jog area. The default range is set from -200% to +200%. This is set via the menu Parameters > Parameters Profiles: Media Dispatcher > Default profile > Player tab: JogRangeHI and JogRangeLO parameters.

Audio can be heard when using the jog.

MEDIA BAR

The top area on the bar represents the media, or a portion of it, currently loaded on the Player. The mark IN, mark OUT and nowline are displayed on this top area (See the section 'Nowline, Mark IN and Mark OUT', on page 71).

The middle area includes a dark grey zone. This zone shows the portion of the media out of the whole media included in the top area and the position in the whole media:

• When a media has just been loaded, the top area represents the whole media: The dark grey area covers the whole space in the middle area.

- If you position the mouse on the middle area and rotate the mouse wheel up or down, you respectively enlarge or reduce the dark grey area, hence increasing or reducing the portion of the media included in the top area.
- If you click on the dark grey area and drag it, you shift the portion of media included in the top area.

 When a mark IN and mark OUT are defined, double-clicking on the dark grey area will toggle the portion covered by the top area from the entire media length to the clip length (portion between mark IN and mark OUT).

NOWLINE, MARK IN AND MARK OUT

In the Clip Player, the (mark) IN, (mark) OUT points, and the nowline will be used in the media bar for transport and editing actions. In the Storyboard, only the nowline is relevant.

Display

An IN point, or mark IN point is shown as a green line on the media.

An OUT point, or mark OUT point is shown as a red line on the media.

The nowline, that is to say the current position within the media, is shown as a blue line on the media bar. To place the nowline at a given position, simply click at the requested position on the media bar.

IN and OUT Points

When the source clip is loaded from the Thumbnail view into the Clip Player, the IN point and OUT point correspond to the source clip boundaries.

When the source clip is loaded from the Storyboard view into the Clip Player, the IN point and OUT point correspond to the storyboard clip boundaries.

Mark IN and Mark OUT Points

In the Clip Player, click at the requested position on the media bar and click the Mark IN button to add the mark IN of a sub-clip.

In the Clip Player, click at the requested position on the media bar and click the Mark OUT button to add the mark OUT of a sub-clip.

Moving Points

To move the position of the mark IN, mark OUT or nowline, click on them with the mouse and drag them to the desired position.

Nowline Outside Media Bar

When the media is being played, the nowline moves along the top area of the media bar. If the portion of the top area covers only a part of the media, the nowline may disappear. In this case, a red indicator, on the left side or on the right side of the Media bar will be displayed. A click on the vertical indicator (on the left or right side) will re-centre the top area to the nowline.

4.8.5 TRANSPORT FUNCTIONS

TRANSPORT COMMANDS IN THE CLIP PLAYER

The following table shows an overview on the various transport control fields in the Clip Player. The table lists the most used commands when they can only be accessed via a shortcut key.

Note:

The user can customize the keyboard shortcuts via the menu Parameters > Keyboard Profiles. See also the section 4.3 'Menu Bar', on page 45.

Field/Button	Keyboard Shortcut	Function Name and Description
	(space bar)	Play/Stop Start/stops the preview (video and/or audio) of a clip or rush. The button changes to a Stop icon when the media is being played.
-	Q	Go to IN Moves from the current position to the Mark IN point.
-	W	Go to OUT Moves from the current position to the Mark OUT point.
	U	Fast Forward Plays the media forward at a preset fast speed. The button changes to a Stop icon when the media is being played forward.
Ctrl +	-	Fast Forward (with modified speed) Changes the preset speed to higher speed value. The speeds are set in the menu Parameters > Parameters Profiles: Media Dispatcher> Default profile > Player tab: ShiftSpeedMax parameter.
	Y	Fast Rewind Plays the media backward at a preset fast speed. The icon changes to a Stop icon when the media is being played backward.
Ctrl +		Fast Rewind (with modified speed) Changes the preset speed to higher speed value. The speeds are set in the menu Parameters > Parameters Profiles: Media Dispatcher> Default profile > Player tab: ShiftSpeedMax parameter.
	# 3 or 	Go to Prev. Frame Moves 1 frame before the current position in Pause mode.

Field/Button	Keyboard Shortcut	Function Name and Description
	or -	Go to Next Frame Moves 1 frame after the current position in Pause mode.
-	Or Ctrl +	Previous 10 Frames Moves 10 frames before the current position in Pause mode.
-	Or Ctrl +	Next 10 Frames Moves 10 frames after the current position in Pause mode.
(C)	% 5	Playing a clip from mark IN to mark OUT
-	Ctrl	Playing a clip in loop from mark IN to mark OUT
	00:02:15:17 00:00:09:09	TC OUT of the loaded clip.
	00:02:15:17 00:00:09:09	 Duration from the IN point to the OUT point: If the clip is loaded from the thumbnail view, it displays the duration of the source clip. If the clip is loaded from the storyboard, it displays the duration of the storyboard clip.

TRANSPORT COMMANDS IN THE STORYBOARD PLAYER

The following table shows an overview on the various transport control fields in the Storyboard Player. The table lists the most used commands when they can only be accessed via a shortcut key.

Note:

The user can define the keyboard shortcuts in Xedio Manager to perform transport control commands. The keys mentioned below are the default settings.

Field/Button	Keyboard Shortcut	Function Name and Description
	(space bar)	Play/Stop Start/stops playing the storyboard. The button changes to a Stop icon when the media is being played.
	U	Fast Forward Plays the media forward at a preset fast speed. The button changes to a Stop icon when the media is being played forward.
Ctrl +	-	Fast Forward (with modified speed) Changes the preset speed to higher speed value. The speeds are set in the menu Parameters > Parameters Profiles: Media Dispatcher> Default profile > Player tab: ShiftSpeedMax parameter.
	Y	Fast Rewind Plays the media backward at a preset fast speed. The button changes to a Stop icon when the media is being played backward.
Ctrl +		Fast Rewind (with modified speed) Changes the preset speed to higher speed value. The speeds are set in the menu Parameters > Parameters Profiles: Media Dispatcher> Default profile > Player tab: ShiftSpeedMax parameter.

Field/Button	Keyboard Shortcut	Function Name and Description
	# 3 or -	Go to Prev. Frame Moves 1 frame before the current position in Pause mode.
	or -	Go to Next Frame Moves 1 frame after the current position in Pause mode.
-	Or Ctrl +	Previous 10 Frames Moves 10 frames before the current position in Pause mode.
-	Or Ctrl +	Next 10 Frames Moves 10 frames after the current position in Pause mode.
		Go to Next Transition (Storyboard Player only) Moves to the next storyboard clip.
		Go to Prev. Transition (Storyboard Player only) Moves to the previous storyboard clip.
	00:00:15:17 00:00:00:00	Duration of the storyboard.
	00:00:15:17 00:00:00:00	This field is not used in the Storyboard Player.

4.8.6 CLIP CREATION FIELDS

The Clip Creation fields are specific to the Clip Player. The storyboard clips can indeed not be modified once they are included in the storyboard.

The following table describes the various fields that are used to create clips:

Field/Button	Keyboard Shortcut	Function Name and Description
Е	or I	 Mark IN Sets a mark IN point at the nowline position on the media bar: A timecode value is added in Mark IN TC field. A [sign is shown on the video display A green mark is added at this timecode on the media bar.
3	or O	 Mark OUT Sets a mark OUT point at the nowline position on the media bar: the timecode value is added in Mark OUT TC field. A] sign is shown on the video display A red mark is added at this timecode on the media bar.
	00:47:20:03	Clip Name Field where the clip name can be entered.
	00:47:20:03 00:47:34:01	Mark IN TC Timecode of the Mark IN defined on the loaded media.
	00:47:20:03	Mark OUT TC Timecode of the Mark OUT defined on the loaded media.

Field/Button	Keyboard Shortcut	Function Name and Description
00:47:54:17 Koen Waut	00:47:20:03	Nowline TC Timecode of the nowline defined on the loaded media.

To move the mark IN, mark OUT or nowline to a given TC, type the timecode in the corresponding field and press ENTER.

You can edit hours, minutes, seconds or frames separately in the timecode fields:

- Double-click on the hours, minutes, seconds or frames area, and the corresponding area will be activated for editing.
- Simple-click in the timecode field, the cursor should blink on the right and you can type the full timecode value.

4.8.7 Log Buttons

The Log buttons are common to the Clip Player and Storyboard Player.

The logs are reference points to a specific frame in a video sequence. Their purpose is to mark points of interest on the media. The log is identified by a TC value, and relates to an action in a given event. It is associated to keywords and/or a ranking in Xedio Dispatcher. When no metadata is associated to them, they are named 'cue points'.

The three Log buttons are used to add and delete logs, as well as to move from one log to the other.

For more information on how to create and manage logs, refer to the section 5.6 'Adding Logs to a Clip', on page 99.

5. Operation

5.1 GENERAL WORKING PROCESS

When you want to create and export a storyboard, you will usually apply the following steps. These steps are explained as simple procedures in the following sections. Click on the step to jump directly to the corresponding section.

- 1. Creating an empty storyboard, on page 79
- 2. Selecting media, on page 83
- 3. Adding sub-clips to the storyboard, on page 97
- 4. Adding logs to clips and/or storyboard (optional), on page 99
- 5. Checking the storyboard, on page 104
- 6. Exporting the storyboard, on page 105

5.2 MANAGING THE STORYBOARDS

5.2.1 How to Create an Empty Storyboard

To create a storyboard, proceed as follows:

1. Click the + sign in the top left corner of the Storyboard area.

This opens The Storyboard Properties window.

From the General tab:

- 2. Type the name of the storyboard in the Label field (mandatory).
- 3. Fill in the other fields, if needed.

Field	Description
Description	Optional text to describe the edit.
VarID	VarID given to the storyboard.
Aspect ratio	Default aspect ratio to be used for the edit. With HD video standards, the aspect ratio 16:9 is selected and cannot be modified in Xedio CleanEdit. This does not prevent from using a media with a different aspect ratio in the edit. With SD video standards, you can choose the aspect ratio between 4:3 and 16:9, and you can modify this as long as the edit is empty.

- 4. Set the start timecode that will be taken into account during the storyboard export. Two options are available.
 - Get the TC IN of the first storyboard clip as start TC by selecting the From First Clip option.
 - Manually set the start TC by clearing the From First Clip option and entering a specific timecode in the Start Timecode field.
- 5. From the Custom Metadata tab, two cases can occur:
 - o If only a default metadata profile is defined for edits, the metadata fields of the default profile are displayed in this tab and can be filled in.

o If several metadata profiles have been associated to the edits in Edit Metadata Profile Association window (one default profile and one or more associated profiles),

 First select the requested profile in the Metadata Profile list (first row of the table).

Then, the metadata fields linked to the selected profile will be displayed in the rows below

- Fill in the metadata fields.

Note

The Allow Change Edit Properties option must have been selected from Parameters > Parameters ProfilesMedia Dispatcher > Cefiltermgr to allow the display and update of Custom Metadata.

6. Click OK.

The new storyboard is now available in the Storyboard area as a new tab. The tab name is the storyboard name. When a storyboard is active, the tab is underlined in the Storyboard area.

5.2.2 OTHER POSSIBLE ACTIONS ON STORYBOARDS

The following table describes the various actions you can perform on a storyboard:

Action	Description
Opening a storyboard	Click on the tab of the requested storyboard. The tab name is underlined and the storyboard clips are displayed in the Storyboard tab as thumbnails.
Modifying a storyboard properties	Right-click the storyboard tab and select Storyboard Properties from the contextual menu.
	The Storyboard Properties window is displayed. Type the new data and click OK.
	See section 5.2.1How to Create an Empty Storyboard79 for details on this window.
Deleting a storyboard	Right-click the storyboard tab and select Delete Storyboard from the contextual menu.
	A message will ask you for confirmation before deleting the storyboard.
Sending a storyboard to	Right-click the storyboard tab and select Send Storyboard to Export Tool from the contextual menu.
the Export tool	For more information on exporting storyboards, refer to the section 5.9 'Exporting the Storyboard', on page 105.

5.3 SELECTING RELEVANT MEDIA

5.3.1 DISPLAYING FOLDER CONTENT IN THE SOURCE DEVICE AREA

XF drives or USB devices containing media backed up from EVS video servers on an event location can be used in Xedio Dispatcher.

HOW TO ADD AND SCAN A FOLDER

To display a folder content, proceed as follows:

- 1. In the Source Device area, right-click the Folders line.
 - A contextual menu appears.
- 2. Select Add & Scan Folder.
 - A window opens.
- 3. Type a device name.
- 4. Browse for the device folder to scan.
- 5. Click OK.

The folder is added to the Source Device area and its content is scanned and can be displayed in the Workspace area.

FOLDER DISPLAY PROPERTIES

To change the root folder display, right-click the Folders area in the Source Device area. A contextual menu appears. The **Root Folder Display** option gives access to a sub-menu with several display options:

Menu Option	Description
Device Label	This corresponds to the device name given during the Add & Scan Folder operation.
Folder Name	This corresponds to the name of the folder/volume.
Full Path	This corresponds to the folder full path (folder and its subfolders)
Folder – Path	This displays the folder name followed by the folder path.

MANAGING THE FOLDERS

A right-click on a folder opens a menu providing options to add a scan folder, to rescan the selected folder, to change the properties of the selected folder or to delete the selected folder.

5.3.2 LISTING CLIPS IN THE WORKSPACE AREA

You will create the storyboard clips on the basis of source clips included in the available media.

In the Workspace area, two views are available to display the content of selected devices or folders.

- the Thumbnail view
- the List view

DISPLAYING THE SOURCE CLIPS IN THE THUMBNAIL VIEW

Ticking the check box corresponding to a media in the Source Device area and clicking the button to select the Thumbnail view will display thumbnails for each source clip included in this media on the Workspace area.

LISTING THE SOURCE CLIPS IN THE LIST VIEW

Ticking the check box corresponding to a media in the Source Device area and

clicking the button to select the List view will display the list of source clips included in this media and their associated metadata on the Workspace area.

5.3.3 SEARCHING FOR CLIPS WITHIN THE LIST VIEW

Introduction

When the Xedio Dispatcher displays large amounts of clips, it may become difficult to find a specific element. The List view offers several ways to speed up your search:

- quick text search
- filters on parameters

By default, the columns that are taken into consideration for the Quick Text Search are the ones currently visible in the grid.

If you wish to search in other columns, and view the string you are searching for in the columns, you can:

- add other columns to the Elements grid
- use Filters, as explained in section 'Advanced Filters' on page 87

These search tools are explained in detail below.

All these search tools can be combined and they can be saved for later use. These **Saved Filters** can then be applied in one click.

QUICK TEXT SEARCH

Introduction

The Quick Text Search field is always available on the top of the Elements grid:

It allows searching for a string in the displayed columns.

The Quick Text Search option obeys specific rules which can be accessed via the Help button next to the Quick Text Search field.

For more details on these rules, refer to the section 'Quick Text Search Rules', on page 87.

How to Perform a Quick Text Search

To perform a Quick Text search, proceed as follows:

- 1. Show the columns you wish to perform a quick search on.
- 2. Type a search string in the Quick Text Search field, based on Quick Text search rules available from the Help button 'Quick Text Search Rules' on page 87.

3. Click the Search button.

The Quick Text Search is applied and the search result is displayed in the grid.

- 4. To clear the applied Quick Text Search, click the red "X" button to the right of the Search field or select <empty> from the Quick Text Search field.
- 5. The Quick Text Search field is a combo box that gives access to the last 10 previously searched strings.

Select a filter from the list of the **Quick Text Search** field to apply a previous search.

Quick Text Search Rules

The string that you enter in the **Quick Text Search** field is analyzed according to the following set of rules, which can be accessed via the **Help** button the **Quick Text Search** field.

The free text search is not a case sensitive operation.

Search String	Search Result
Yellow card	Searches for the strings 'yellow' and 'card', even if in two different fields (columns), for example 'yellow' in Name and 'card' in Keywords.
	For example a clip named 'The Yellow Man' with keywords 'Red Card' will be found, since it has yellow and card in 2 different fields.
"Yellow card"	Searches for strings containing 'Yellow card'.
Yellow card	Searches for 'yellow' or 'card', even if in two different fields (columns), for example 'yellow' in Name or 'card' in Keywords. Spaces around the sign are mandatory.
yell*	Searches for 'yell' at the beginning of a string.
*low	Searches for 'low' at the end of a string.
Ye*low	Searches for strings with 'ye' at the beginning and 'low' at the end.
Ye*low 123	Searches for strings with 'ye' at the beginning and 'low' at the end and which contains '123'.
=card	Searches for a string exactly equals to 'card'.
	For example, if a field contains 'yellow card', the =card condition will not return any result.
="yellow card"	Searches for a string exactly equals to 'yellow card'.
	The use of quotes is required due to the space between 'yellow' and 'card'.

ADVANCED FILTERS

Filters are available for more detailed search operations. The parameters available for filtering operations are the column headings and any metadata associated by the user.

Filter Activation

Show/Hide Filter Button

To display, or hide, the Filter extended area, click the **Show/Hide Filter** button over the grid.

Filter Button Display Meaning

(white)	The Show/Hide Filter button is dimmed when all filter criteria are hidden. Consequently, the filters are inactive.
(colored)	The Show/Hide Filter button is red when the filter extended area is visible, even if no filtering criterion is applied.

Filter Extended Area

The Filter extended area is as follows:

The first field under the **Show/Hide Filter** button lists three options for the combination of criteria to be taken into account during the filtering operation.

The second field is a filter field allowing the users to select a first filter parameter.

Criteria Combination

The available options are detailed in the table below:

Option	Meaning
ALL criteria are met	All the criteria selected in the Filter fields displayed under the Criteria Combination field must be met.
	The media displayed in the Elements grid fulfill all the selected filter criteria.
ANY criteria is met	At least one of the criteria selected in the Filter fields must be met.
	The media displayed in the Elements grid fulfill at least one of the selected filter criteria.
NO criteria is met	None of the criteria selected in the Filter fields displayed under the Criteria Combination field must be met.
	The media displayed in the Elements grid fulfill none of the selected filter criteria.

Filter Fields

Under the **Criteria Combination** field, the users will be able to select as many filter parameters as they want and to choose specific value(s) for these filter parameters. The use of **Filter** fields is explained in the next section.

Filter Fields

The **Filter** field provides the list of all the parameters on which a search can be performed. The following screenshot is an example of such a list. The options may differ between the applications of the Xedio Suite.

Once a parameter has been selected, an entire line is displayed.

Interface Element	Description
1	Selected filter parameter.
2	Various fields used to enter the filter criteria. Refer to section 'Search Fields Types' on page 90.
	Used to remove the corresponding filter line.
+	Used to add a new filter line.

Search Fields Types

According to the selected filter parameter, different types of search fields will be displayed. They are detailed in the table below.

Filter Parameter Displayed Criteria Fields Type

Timecode or Duration Parameter

Such as TC IN, TC OUT, Duration...

Select a logical operator in the first field and then enter a timecode or duration value in the second field.

Range

Such as Timecode Range

Select an option from the first field and then enter a timecode value. This will include, or exclude, media containing the specified timecode value.

Date

Such as Creation Date Several Date Search filters exist. They are described below.

a. Select a condition or a logical operator in the first field

- b. This will condition the next step:
- Search based on a specific date (e.g. with is...): a calendar will be displayed for the selection of a date.

Filter Parameter Displayed Criteria Fields Type

• Search based on an interval (e.g. with between...): two calendars are displayed for the selection of two dates.

 Search based on a specific date calculated from the current date (e.g. with tomorrow, last month,...): no other field appears.

Time

Such as Last Rendered Date Time Several Date Search filters exist. They are described below.

a. Select a condition or a logical operator in the first field

- b. This will condition the next step:
- Search based on a specific date and time (e.g. with is...): two additional fields will be displayed, a calendar for the selection of a date and drop-down list for the selection of time.
- Search based on a specific date and time calculated from the current date and time (e.g. with next hour, last month,...): no other field appears.

Filter Parameter Type

Displayed Criteria Fields

Number

Such as DB Id

Select a logical operator in the first field and then enter a number in the second field.

Note

<> means 'differs from'

Option List

Such as Video Standard

Select a condition in the first field

Click the button to display the list of options available for the selected filter parameter.

Example for the Video Standard:

Select an option from the list.

Boolean

Select Yes or No from the single criteria field

Such as Published

Free Text

Such as Label

Select a condition in the first field and then enter text in the second field.

How to Perform a Search through Filter Fields

To enter search values in the Filter fields, proceed as follows:

- 1. Choose the columns you wish to perform a search on.
- Click the Show/Hide Filter button
 The following Filter area is displayed:

3. Select a criteria combination from the list:

4. Select a filter parameter from the filter parameter list.

An entire line, corresponding to the selected filter parameter, is displayed:

5. Enter filter criteria as explained in section 'Search Fields Types' on page 90.

For free text fields, press ENTER to apply the filter.

Otherwise, the Elements grid is automatically restricted.

6. If required, click the button to add a filter parameter.

USING SAVED FILTERS

Once you have defined a filter criterion, you may want to save it for later use. You will then be able to apply the same filter with a single click.

Right-clicking in the Filter 0 tab displays a contextual menu with the following options:

Menu Option	Description
Create New Filter	Allows the users to create a new filter tab.
	Filter Edit Dialog X Label:
	Description: Cancel
Save Filter As	Allows the users to create a new filter tab in which the current search filter will be saved.
Filter Properties	Allows to change the name and/or description of the selected filter tab.
Reset Filter	Removes all search criteria on the selected filter tab.
Delete Filter	Removes the filter tab.

How to Save Filters

To save filters, proceed as follows:

- 1. Define the filter or filters combination you wish to save, as explained above.
- 2. Right-click the Filter 0 tab.
- $\textbf{3.} \qquad \textbf{Select Save Filter As from the contextual menu}.$

The Filter Edit Dialog box opens.

- 4. Enter a label for the tab you are going to create and, if required, enter a description.
- 5. Click **OK** to confirm.

The new filter tab is displayed on the left of the list.

How to Apply a Saved Filter

To apply a saved filter, simply click the corresponding tab.

5.4 LOADING A SOURCE CLIP ON THE CLIP PLAYER

5.4.1 Purpose

A clip can be loaded on the Clip Player in different ways. You can then create subclips from the source clip and include them into the storyboard. For more information, refer to the section 5.5 'Adding Clips or Sub-Clips to the Storyboard', on page 97.

5.4.2 How to Load a Clip in the Clip Player

 To load a source clip from the Thumbnail view, double-click on it and the clip will display in the Clip Player.

The clip boundaries displayed are the ones of the source clip.

- To load a source clip from the List view, double-click on it and the clip will display in the Clip Player.
- To load the source clip on which a storyboard clip is based, double-click the storyboard clip in the storyboard and the clip will display in the Clip Player.

The clip boundaries displayed are the ones of the storyboard clip.

When you load a clip in the Clip Player, the Clip Player becomes automatically active, and the Clip Player button is selected

5.5 ADDING CLIPS OR SUB-CLIPS TO THE STORYBOARD

You can create sub-clips of the source clips in the Clip Player, or take over the source clips, and add them to the open storyboard.

5.5.1 How to Create a Sub-Clip and Add it to the Storyboard

To create a sub-clip and add it to the storyboard, proceed as follows:

- 1. Ensure the requested storyboard is open in the Storyboard area (see section 5.2.1, on page 79).
- 2. Open the requested source clip in the Clip Player view (see section 5.3, on page 83).
- 3. Add a mark IN point in one of the following ways:
 - Use the transport control buttons (see page 72) to move the nowline to the requested frame and click mark IN button.
 - o Type the requested TC in the TC Mark IN field and press ENTER.
- 4. Add a mark OUT point in one of the following ways:
 - o Use the transport control buttons (see page 72) to move the nowline to the requested frame and click mark OUT button
 - o Type the requested TC in the TC Mark OUT field and press ENTER.
- 5. Enter a name in the Clip Name field, if requested.
- 6. Drag the sub-clip to the open storyboard and drop it either at the end of the storyboard, or between two storyboard clips. The position where the clip will be dropped when you release the mouse is shown with a vertical green bar:

Note

You cannot modify a storyboard clip once it is included in a storyboard. If you want to change the boundaries of the storyboard clip, you need to, add a new one with the requested boundaries and delete the storyboard clip (see p.98).

5.5.2 How to Add Source Clips to the Storyboard

To add a source clip to the storyboard, you can drag it from the Thumbnail view or from the List view of the workspace and drop it at the requested place in the Storyboard area.

To add several source clips at a time, you can select them thanks to the usual commands, as detailed in section 'Selecting Techniques' on page 49.

Clips are then added in chronological order.

5.5.3 How to Replace a Clip in the Storyboard

To replace a clip in the storyboard by a source clip or a sub-clip, press the CTRL key while dragging the source clip or the sub-clip to the storyboard.

The storyboard element that is going to be replaced is surrounded by a green line:

5.5.4 How to Modify the Storyboard Clip Boundaries

You cannot edit the boundaries of a storyboard clip. In this case you need to replace the storyboard clip.

To modify the boundaries of a storyboard clip, proceed as follows:

- In the open storyboard, double-click the storyboard clip you want to replace.
 This loads the source clip of the storyboard clip on the Clip Player.
 The displayed clip boundaries are the ones of the storyboard clip.
- 2. Modify the mark IN and/or mark OUT points to prepare the new sub-clip.
- 3. Drag the new sub-clip to the storyboard and drop it after the clip to be deleted.
- 4. Right-click the clip to be deleted in the storyboard and select **Delete Selected Edit Clip** from the contextual menu.

5.6 ADDING LOGS TO A CLIP

5.6.1 Introduction

Whenever you want, you can add logs to the material loaded in the Clip Player, or in the Storyboard Player. Even if you add the log in the Storyboard Player, the logs are in fact added to the source clip.

A cue point is a log without associated metadata.

When keyword grids are stored in C:\Program Files\EVS Broadcast Equipment\XedioDispatcher\Keyword Grids, the grids are automatically detected and are available in the Logger tab. Then keywords can be associated to a log.

Would keywords grids be available or not, a ranking level and/or free text can always be associated to the log.

5.6.2 How to Add a Log to a Clip and Associate Metadata

The following procedure explains the different ways to add logs and to associate metadata to them.

Preliminary Steps

You first need to load a clip and position the nowline at the specific timecode:

- 1. Load the source clip in the Clip Player or the storyboard clip in the Storyboard Player. For more information, see the sections 5.4.2 and 5.8.2.
- 2. Position the nowline on the frame where you want to add a log in one of the following ways:
 - Using the transport buttons
 - o Dragging the nowline to the requested frame
 - o Typing the requested TC in the nowline TC field (in Clip Player only) and pressing ENTER.

Add a Cue Point

If you want to add a cue point, which is a log with no associated metadata, simply click the **Add Log** button

A white triangle is displayed on the media bar at the cue point timecode.

Add a Log with Metadata

A log can be added with one or a combination of the following metadata:, free text, ranking level and keywords. A log can be entered in one of the following ways:

 In the Logger tab of the Tools area, click the requested Ranking button (from no star to three stars) to assign a ranking level to the log

A colored triangle is displayed on the media bar.

• In the Logger tab of the Tools area, enter some text in the free text field to add free text to the log

A white triangle is displayed on the media bar.

- If keywords grids have been detected by Xedio Dispatcher, they are available from the Logger tool. Then, proceed as follows:
 - 1. Click the Keyword Grid Selection field.

The list of available keyword grids is displayed:

- 2. Select the keyword grid you want to use.
- 3. Click the keywords you want to associate to your log

A white triangle is displayed on the media bar.

5.6.3 LOG AND METADATA DISPLAY

The log created is added to the media bar, but the log and its associated metadata are displayed in different ways in the user interface.

LOG COLOR AND RANKING

The log will have a different color depending on the ranking assigned:

- White log for no-star ranking (default) or for a cue point (no associated metadata)
- Blue log for 1-star ranking
- Green log for 2-star ranking
- Red log for 3-star ranking

KEYWORDS ASSOCIATED TO A LOG

Player Area

Once the nowline is positioned on a log timecode, the keywords associated to this log are listed below the video display and are displayed as a tool tip when you roll the mouse over the log:

Logger Area

When the nowline is positioned on a log, you can easily find back the keywords assigned to this log in the Logger area as:

- The keyword grid and keyword grid pages that contain keywords assigned to the selected log are displayed with an asterisk.
- The keywords assigned to the selected log are displayed on a lighter background, like 'Injury' in the next screenshot.

5.6.4 OTHER POSSIBLE ACTIONS ON LOGS

The following table describes shortly other possible actions on logs:

Moving from one log to the other

Description

- Click the **Go to Prev. Log** button to move to the log positioned on the left of the nowline.
- Click the **Go to Next Log** button to move to the log positioned on the right of the nowline.

Deleting a log

Action

When the nowline is positioned on a log (using the b, buttons) you can delete it (and all its metadata) in one of the following ways:

• Clicking the **Delete Log** button bottom of the Logger area.

Clicking CTRL+ in the Player area.

Displaying only logs having a given ranking

By default, all logs are displayed in the loaded material.

If you want to display only the logs having a specific ranking, right-click on the log, right above the media bars.

The following contextual menu is displayed. Select the check boxes (external) that correspond to the ranking(s) you want to display.

Do the reverse operation to redisplay all logs.

5.7 RECORDING AN AUDIO GUIDE TRACK

5.7.1 Introduction

You have the possibility to record a voice-over sequence on one track of the storyboard.

You can only record one audio guide track for one storyboard. Once the audio guide track has been created, you cannot modify it. If you want to change it, you need to delete it and record a new one.

By default, the audio guide track is stored and exported on the stereo track 3 of the storyboard. The track on which it is stored is defined via the menu Parameters > Parameter Profiles: Media Dispatcher > Default parameter profile > Storyboard tab: AudioGuideTrackOutput setting. Audio guide track will be mixed over any existing audio on this audio track.

5.7.2 How to Record an Audio Guide Track

The storyboard on which you want to add the audio guide track is already loaded in the Storyboard Player (see section 5.8.2 'How to Load a Storyboard in the Storyboard Player' on page 104).

To record an Audio Guide Track on the storyboard, proceed as follows:

- 1. Position the nowline where you want to start the audio guide sequence.
- 2. Click the **Start Audio Guide** button

 A countdown (default 3-second preroll) starts and is shown on the button

 It indicates the number of seconds before the recording process starts and allows you to get ready for the recording.
- 3. Start speaking when the button turns red
- 4. Click the button again when the voiceover sequence is finished.

The record button becomes the **Delete Audio Guide** button button if you are not satisfied with the recorded audio guide, and create a new one.

Note

The default value for the Audio Track Guide Preroll can be modified in the AudioGuideTrackPreRoll setting defined via the menu Parameters > Parameter Profiles: Media Dispatcher > Default parameter profile > Storyboard tab.

5.8 CHECKING THE STORYBOARD

5.8.1 Introduction

Once the storyboard is created, you can check the result by loading the storyboard in the Storyboard Player.

5.8.2 How to Load a Storyboard in the Storyboard Player

To load a storyboard in the Storyboard Player, proceed as follows:

- 1. Click the **Storyboard Player** button to open the Storyboard Player.
- 1. Drag the tab of the requested storyboard to the Storyboard Player:

The storyboard is open in the Storyboard player. In play mode, the frame around the storyboard clip will turn black when the corresponding clip is being played:

5.9 EXPORTING THE STORYBOARD

5.9.1 Introduction

Once your storyboard is finalized, you can export it to multiple destinations and to multiple formats at the same time.

Xedio Dispatcher makes it possible to export the final storyboard to various destination types:

to Target

This allows you to export a storyboard to destination folders and formats predefined in the target profiles you can select before you launch the export process. For more information on creating new target profiles, refer to the section 3.1 'Export Target Profiles', on page 9.

Each target profile is defined in an .xml file that has to be stored in C:\XedioDispatcherMS\Profiles\RTProf.

to File

This allows you to export a storyboard to a file that can be read by an external system.

to Device

This allows you to export a storyboard to an external device: XDCAM, XDCAM SxS or P2.

5.9.2 Overview of the Storyboard Export Process

This section gives you an overview on the export process:

1. Open the relevant Export tab:

In the Tools area, click the Export tab corresponding to the required destination type to expand it:

2. Select the storyboard to be exported:

From the Storyboard area, add the storyboard to the selected Export tab in

one of the following ways:

• Right-click in the Storyboard area, and select the **Send Storyboard to Export Tool** command in the contextual menu:

This action is only valid for the Export to Target type.

• Drag the storyboard tab to the open Export tab:

This action is valid for any type of export: to Target, to File and to Device.

3. Specify the export settings:

Specify the export settings as detailed in the section 4.6.3 'Export Tools' on page 59 for the selected tab.

4. Launch the export process:

Click the **Start** button at the bottom of the Export tab to begin the conversion process.

5.9.3 EXPORTING A STORYBOARD TO A TARGET

HOW TO EXPORT A STORYBOARD TO TARGET

To export a storyboard open in the Storyboard area to a target, proceed as follows:

- 1. Click the Export to Target tab in the Tools area to expand it.
- 2. In the Target field, do one of the following:
 - o to use an existing export profile: from the **Target** field, select the name of the Target Profile you want to use to export the storyboard.

- o to create a new profile: select **Create new target** from the **Target** field and proceed as described in section 3.1.2 'Creating your Own Export Target Profile' on page 9.
- 3. From the Storyboard area, add the storyboard to the list of export jobs.

 The storyboard name is added to the list of export jobs.
- 4. Click **Start** at the bottom of the Export tool.

The storyboard is exported as defined in the selected target profile.

The progress of the export job is displayed in the List of export jobs:

Refer to section 'Export Job Status' on page 61 for the list of possible displays.

The storyboards added to the list will remain available in the list, whether they have been exported or not, until the end of the user session.

EXPORTING METADATA

During the creation of the export target profile, if the **Generate EVS metadata file** option has been selected in the High Resolution File Creation dialog box, in the Proxy/LoRes File Creation dialog box and/or in the Export to EVS Video Server dialog box, an evs.xml file that contains all the metadata associated to the A/V material is created for each codec/format, and destination folder defined in the target profile.

EXPORTING LOGS

During the creation of the export target profile, if the **Generate log sheet file** or the **Export logs as locators to Avid** option has been selected in the Export Log Sheet File dialog box, storyboard cut points are exported as logs.

- Storyboard start timecode and storyboard end timecode are considered as cut points.
- Each cut point between the start and the end of the storyboard contains 2 logs: on for the IN point and one for the OUT point.

Each log will contain the following information:

- No ranking
- No keyword
- Description giving the source media label, the TC IN or TC OUT of the source media shot by the camera, and the shooting date.

OTHER POSSIBLE ACTIONS ON EXPORT JOBS

The following table describes other possible actions on export jobs:

Action	Description
Deleting an item in the list of export jobs	Right-click the item in the list that you want to remove, and select Delete Selected Item from the contextual menu
	Name Progress Foot_Hig Delete selected item
	OR
	Select the item and press the Delete key.
Clearing the list of export jobs	To clear the list of export jobs, already exported or not, click the Clear List button at the bottom of the Export Tool area.
	It does not clear the output of export jobs stored on the various destination folders.
Moving an item in the list of export jobs	To move an item within the export list, drag it to required position. A thin red line indicates the drop position.
Renaming an item in the list of export jobs	To rename an item within the export list, select the Name field and type a new name.

5.9.4 How to Export a Storyboard to File or Device

To export a storyboard open in the Storyboard area to a file or device, proceed as follows:

- 1. Click the Export to File or Export to Device tab in the Tools area to expand it.
- From the Storyboard area, add the storyboard to the tab.
 The information group box, as well as the File Name label, is filled with the information related to the storyboard.
- 3. Complete the fields from the Destination zone
- 4. Click **Start** at the bottom of the Export tool.

The export process begins and a progress bar allows the user to monitor the progress of the process.

At the end, a message informs the user that the process has been successfully completed:

Note

'40% playout rate' means that the encoding process was 40% slower than real time (100% means real-time, 200% means 2 times faster than real time).

5.9.5 EXPORTING CLIPS AND SUB-CLIPS

You can also export individual source clips, or sub-clips using the one of the Export tools. Proceed in the same way as for storyboards for exporting clips and sub-clips.

To add a source clip, drag the thumbnail of the source clip from the Thumbnail view or from the List view of the workspace to the open Export tab corresponding to the required destination types. To add several source clips at a time, you can select them thanks to the usual commands, as detailed in section 'Selecting Techniques' on page 49. Clips are then added in chronological order.

To add a sub-clip created in the Clip Player, define the IN and OUT points, and possibly name for the sub-clip in the Clip Player, and drag it to the open Export tab.

Glossary

Term/Acronym	Definition/Explanation
Cue Point	Reference point to a specific frame in a video sequence. Their purpose is to mark points of interest on the media. The cue point is only identified by a TC value.
Event	Event that is associated to a production show. It can be a football game, an entertainment show, a reality show,
Keyword	Metadata attached to a log that provides information on the media content.
Keyword grid	Keywords displayed as icons in a grid.
Level of interest	See 'Ranking'
Log	Reference points to a specific frame in a video sequence. Their purpose is to mark points of interest on the media. The log is identified by a TC value, and relates to an action in a given event. It is associated to keywords and/or a ranking, and possibly other metadata related to the action.
Log sheet	File that contains all logs for a given event.
Ranking	Metadata attached to a log that characterizes the importance given to the log, and usually symbolized by stars (no star = not important, 1 star = useful, 2 stars = important, 3 stars = very important).
Source clip	A/V material stored on the device that has recorded it (for example P2, XDCAM cameras, or an EVS server), and used as source content to create another A/V output (playlist, timeline, storyboard, etc.). This is also called 'shoot' or 'footage'.
Source file	A/V material stored on a workstation or storage, and used as source content to create another A/V output (playlist, timeline, storyboard, etc.).
Storyboard clip	Individual element included in a storyboard. This can be a sub-clip or a full source clip/file.
Sub-clip	Part of a source material, defined by an IN and OUT points, that represents a new A/V material.
