For MAC OS ------ Page 15

Quick Installation Guide - For Windows OS

Package Contents

•	IP Camera with IR-Cut	x 1
•	DC Power Adapter (5V-2.0A)	x 1
•	Network Cable	x 1
•	Wi-Fi Antenna	x 1
•	Mounting Bracket	x 1
•	Quick Installation Guide	x 1
•	CD-ROM with Setup Software	x 1
•	Security Warning Card	x 1

Quick Installation Diagram

Security Warning

- Foscam cameras require good security practices to safeguard your privacy. You can help protect your camera by changing the default username and/or password.
- You should update your camera regularly at *http://www.foscam.us/firmware.html*. Make sure your camera has the latest firmware installed for your specific camera model.

Start Installation

1. Hardware Installation

1) **Open the package**. Take out the camera out of the box carefully.

2) <u>Mount the antenna.</u> Then take the Wi-Fi antenna, mount it on the SMA connector on the back of the camera, screw the antenna to the back, and make the antenna stand vertically.

Mount the antenna

Plug the network cable

3) Get the camera connected to the router, and get it powered.

Use the network cable to connect the camera to the router or the switch in the LAN network at your home or your office. Plug in the power. The small green light on RJ45 will turn on, the small orange light will blink.

2. Software Installation

Insert the CD into the CD drive of your computer and go to the folder "For Windows OS".

Copy the IP camera tool to your computer and start the program.

IP Camera Tool icon

3. Login to the Camera

Once the IP camera tool software is installed, double click the icon on the desktop and the following screen should appear.

🙀 IP Camera Tool		
Camera name	IP Address	Device ID Device type
Anonynous HD816P	Http://172.16.0.109 Http://172.16.0.32:88	00626E4B948D TJPEG 00626E4D8A55 H. 264

IP Camera Tool Windows

The IP camera tool should find the camera's IP automatically after you plug in the network cable. If not, please make sure that DHCP is enabled on your router and that MAC address filtering, firewalls and anti-virus are disabled temporarily until the camera is set up.

Double click the IP address of the camera; your default browser will open to the camera login page.

User	[Default user name is
Password		admin with no passwor

When you log in for the first time, it will request that you modify the default username and/or password . Input the New username, New password and Confirm the password, click "Confirm" to complete the modification. You will now use the new username and password to log in to the camera in the future.

Note

There are three login methods. One is IE ActiveX Mode, the other is Server Push Mode for Safari, Firefox, Google Chrome, the third mode is Mobile Phone for mobile phone. Please choose IE ActiveX Mode if you are using IE browser now.

If it is your first time logging into the camera using **Internet Explorer**, click the "ActiveX Mode" button. This mode is used for Internet Explorer. It will then prompt you to download the ActiveX plugin.

wants to run the following add-on: 'DV	M_IPCam2 ActiveX Control Module' from 'ShenZhen Foscam Intelligent Technology Co.,Ltd'.	Allow

In the above screenshot, we see a grey screen for camera video and a red "X" in the top left corner. This indicates that our ActiveX controls are not configured properly.

Usually in Internet Explorer versions 8 or later, you will see a pop up box at the bottom of the screen, which asks if you would like to allow the ActiveX control module to run for the camera. Click "Allow." Once you login again, you should be able to see live camera video.

- 5 -

Congratulations! You have succeeded in accessing in the camera by wired connection. Just leave all the menus alone before you finish the quick installation.

Note

The default user name is admin with no password.

If you are unable to see a live video, please make sure to allow ActiveX to run when prompted.

If you only see a black screen with a red cross in the center, please try another port number instead of the default "port 80". You may want to try port 85, 8005, etc.

If you are still unable to see a live video, try shutting down any firewall or anti-virus software on your computer.

4. Wireless Connection Setup

Wireless Lan Settings support Infra(Do wireless lan settings manually) ,WPS (Wi-Fi Protected Set-up) and Adhoc modes.

If your router does not support WPS function, please go to chapter 4.1 and make wireless connection settings manually.

If your router supports WPS function, please go to chapter 4.2 and make wireless connection settings quickly.

If there is no wireless router, please read Wireless Settings in the User Manual about how to set Adhoc.

4.1 Infrastructure Mode

Step 01) Please choose "Device Management" and goes to the option Wireless LAN

Settings, click "**Wireless LAN Settings**". Then enable "**Using Wireless LAN**". Click the Scan button and the camera will detect all WIFI devices around the area. It should also display your router in the list.

Wireless Network List	lucy[14e6e462d576] infra dlink[f07d685630dc] infra test1[54e6fc35f13a] infra WEP cisco[00259cb1df9a] infra WEP
	Scan Click Scan Button to search
Using Wireless LAN	WIFI device .
SSID	
Network Type	Infra 💌
Encryption	None

Wireless LAN Settings

<u>Step 02</u>) Click the SSID of your router in the list, the corresponding information (SSID & Encryption) will be filled in the following boxes automatically.

You will only need to fill in the share key. Make sure that SSID, Encryption and share key you filled in for the camera are exactly the same for your router.

Wireless Network List	lucy[14e6e462d576] infra dlink[f07d685630dc] infra test1[54e6fc35f13a] infra WEP cisco[00259cb1df9a] infra WEP Scan	
Using Wireless LAN		
SSID	cisco Click the SSID of router	and SSI
Network Type	Infra V Encryption will be fille	d in t
Encryption	WPA2 Personal (AES)	у.
Share Key		

Wireless LAN Settings

<u>Step 03</u>) Please click on the **Submit** button after all settings have been entered, the camera will reboot. After the camera has completed the reboot process, wait 10 seconds and disconnect the network cable.

The LAN IP address will disappear on the window of IP Camera Tool when the camera gets restarted. Just wait for around 1 minute, the camera will get wireless connection, and the LAN IP of the camera will be showed again on the window of the IP Cam Tool. You have done wireless connection of the camera successfully. If the camera has a dynamic IP, after the wireless settings, the IP will be changed.

Note

If fail to make WiFi connection, please make sure wireless signal is strong enough first, then you can refer to seller or us for help.

4.2 WPS (Wi-Fi Protected Set-up)

Step 01) Press and hold the RESET button for **four seconds**.

Step 02) Press the WPS button on your router **within 60 seconds**. The WPS button is usually on the back or side of your router. On some routers, you may need to log in to the web interface and click on an on-screen button to activate the WPS feature. If you are not sure where the WPS buttons is on your router, please refer to your router's User Manual.

The camera will automatically create a secure wireless connection to your router. If you have plugged in the network cable, please plug it out. While connecting, the green network light on RJ45 will blink and the wireless settings will take effect. The IP Camera Tool will search the camera's LAN IP. Make sure the PC and the camera share the same subnet.

Note

1 During the WPS Settings, you must press the Reset button only for four seconds, or else, the

camera may be reset back to factory default settings if you press and hold on the reset button above 10 seconds.

2 The security mode of router cannot be WEP, or else the WPS settings may be failed.

5. Remote Access Setup

We have been able to access the camera within the LAN network, but how to access the camera via WAN or via internet? We have to do Remote Access Settings before we want to access the camera outside the LAN network.

What is the HTTP Port no. and How to change it ?

1) Default HTTP No.: 80

All the cameras' default http no. is 80. For example, if the LAN IP link of the camera is http://192.168.1.35, it says that the camera's http port no. is 80, if the LAN IP link of the camera is

http://192.168.1.35:88, it says that the camera's http port no. is 88. Port 80 could be blocked when accessing via internet, we need to change port 80 to another one like 88, or 85 as you like, which will not be conflict with other existing ports like 25, 21.

2) Change the default http no.80 to another one like 88, or 85 etc.

How to assign a different HTTP Port No. and fixed the LAN IP of the camera by the IP Camera Tool?

Firstly Open the IP Camera Tool, and select the camera you would like to change the port for. Right click on the IP address, and click on "Network Configuration", this brings up the network configuration box as shown:

Anonymous Foscandeno FI8918V Foscandeno FI8910V Foscandeno FI8909V FI8916V	Http://192.168 Http://192.168 Http://192.168 Http://192.168 Http://192.168 Http://192.168	Basic Properties Network Configuration Upgrade Firmware Refresh Camera Li Select the camera y

	DNS Server	192 .168 . 1 . 1	
	Http Port	88	► Modify the Http Port no.
	User Password	admin	Enter the User name ar password, click OK .

Change the http port no.

Secondly, enter User name & password of the Administrator (default user: admin, no password), and click the button "OK" to apply the modification. The Camera will restart one the modification is done.

Thirdly, after the camera restart and get connected again, you will find the LAN IP link address

has been change to http://192.168.1.35:88, and the LAN IP address is fixed at

http://192.168.1.35:88. It won't be changed no matter you re-power the camera or re-power the router.

Setting up Remote Access

First, check to see if your ISP (Internet Service Provider) provides a Static WAN IP address service or a Dynamic WAN IP address service. This guide has been divided into two different sections of setting up remote access, one for Static IP addresses and one for Dynamic IP addresses.

If your ISP provides Static WAN IP Service please go to Chapter 5.1.

If your ISP provides Dynamic WAN IP Service please go to Chapter 5.2 directly .

5.1 Static IP Addresses

Users who have static IP addresses do not need to set DDNS service settings for remote access. When you have finished connecting the camera using the LAN IP address and port forwarding, you can access the camera directly from the Internet using the WAN IP address and port number.

• How to Obtain the WAN IP from a public website ?

To obtain your WAN IP address, enter the following URL in your browser:

http://www.whatismyip.com. The webpage at this address will show you the current WAN IP.

Get to know the WAN IP address of the router

Access the IP Camera from the Internet

You can access the IP Camera from the Internet (remote access). Enter the WAN IP address and port number in IE browser or other browsers you use. For example, <u>Http:// 183.37.28.254:85</u>

Note

Make sure port mapping (or also known as port forwarding) is successful. You can do port mapping in two ways.

1) Enter the setting page of the router to enable UPNP function. Then login the camera as administrator, choose **UPnP Settings** to enable UPNP and make sure the state is "UPnP success".

2) Do port forwarding manually.

If your router has a Virtual Server, it will do port mapping. Please add the camera's LAN IP and port which you set in basic network settings to the Virtual map list.

Note: If you plug the camera in a router, it will have dynamic IP address and you need to set DDNS service settings to view it remotely.

5.2 How to configure Remote Access Settings (For dynamic IP

user)?

DDNS is a service that allows your Network Camera, especially when assigned with a dynamic IP address, to have a fixed host and domain name, you can access the camera directly from the Internet by the domain name and port number.

① Make Port Forwarding of the HTTP Port of the camera

What is port forwarding?

If you have no concept of Port Forwarding, please open the webpage <u>http://portforward.com/help/portforwarding.htm</u> to learn some knowledge of Port Forwarding. Or Use Google to check out what is port forwarding.

How to do port forwarding within the router ?

Example: The camera's LAN IP address is <u>http://192.168.1.35:88</u>

<u>Firstly</u>, login the router, goes to the menu of **Port Forwarding or Port Trigger** (or named **Virtue Server** on some brands of router). **Take Linksys brand router as an example, Login the router, and goes to Applications & Gaming->Single Port Forwarding.**

Secondly, Create a new column by LAN IP address & HTTP Port No. of the camera within the router showed as below.

Applications & – Gaming						Wireless-N I	lome Router	WRT120
		Setup Wir	eless Securi	ty Acce	ess Restrictions	Applications & Gaming	Administration	Stat
		External Port	Internal Port	Protocol	To IP Address	Enabled		
Single Port	Forwarding		(ee)		192.168.1		Help	
Аррис	None V			12221	192.168.1			
	None V				192.168.1			
	None w				192.168.1			
	Nace w				192.168.1			
Camera	THURE N	88	88	Both 💌	192.168.1. 35		Fill the LAN IP of t	fthe
çanera				Both 💌	192.168.1		the last section	st input 35.
1		fill the port	no. 88 of the	Both 🛩	192.168.1			
Assign a	a name as	External an	d Internal Port	Both 💌	192.168.1			
you like	nere	*		Both V	100 169 1			

Port forwarding

② Use domain name to access the camera via internet

Each FOSCAM camera has embedded a unique DDNS domain name when producing, and the format of domain name is <u>xxxxx.myfoscam.org</u>. On the bottom of the camera body, you can see the domain name sticker.

Here take <u>camera.myfoscam.org</u> for example. Go to option of **DDNS Service Settings** on the administrator panel, you can see the domain name.

The default FOSCAM DDNS status is closed, if you want to use it, please enable it first.

FOSCAM		Outidoe	or Waterproof IP Camera
Device Status Alias Settings Date & Time Settings	DDNS Service Settings		
Users Settings	Manufacturer's DDNS	\frown	
Multi-Device Settings	Enable		Enable FOSCAM DDNS
Basic Network Settings	Manufacturer's Domain	camera.myfosca	um.org
Wireless LAN Settings	Validity Queries		
ADSL Settings	Validity Quelles		
UPnP Settings			
DDNS Service Settings	Third Party DDNS		
Mail Service Settings			
MSN Settings	DDNS Service	None	×
FTP Service Settings		Submit Refre	sh

DDNS Service Settings Windows

Now you can use http:// **Domain name + HTTP Port** to access the camera via internet.

Take hostname camera.myfoscam.org and HTTP Port no. 88 for example, the accessing link

of the camera via internet would be http:// camera.myfoscam.org:88

Foscam domain name is free for three years, three years later, if you want to continue using the account, you need to pay for it.

On the option of **DDNS Service Settings**, click **Validity Queries** to check the validity and you will see the renew link.

Note

If you want to use Third Party Domain name, please read **DDNS Service Settings** in the User Manual about how to set it.

6. Other Settings

Security

At your first time logging in the camera, please go to "**Users Settings**" panel and reset the username or password to prevent intruders connect your device. The default username is admin with a blank password.

FOSCAM		Outdoor Waterp	roof IP Camera

Security Warning

- Foscam cameras require good security practices to safeguard your privacy. You can help protect your camera by changing the default username and/or password.
- You should update your camera regularly at *http://www.foscam.us/firmware.html*. Make sure your camera has the latest firmware installed for your specific camera model.

Start Installation

1. Hardware Installation

1) Open the package. Take out the camera out of the box carefully.

2) <u>Mount the antenna.</u> Then take the Wi-Fi antenna, mount it on the SMA connector on the back of the camera, screw the antenna to the back, and make the antenna stand vertically.

Mount the antenna

Plug the network cable

3) Get the camera connected to the router, and get it powered.

Use the network cable to connect the camera to the router or the switch in the LAN network at your home or your office. Plug in the power. The small green light on RJ45 will turn on, the small orange light will blink.

2. Software Installation

Insert the CD into the CD drive of your laptop and go to the folder "For MAC OS". Copy the IP

camera tool to your MAC and start the program.

IP Camera Tool Icon for Mac

3. Login to the Camera

Double click the IP Camera Tool icon and the following screen should appear.

00	IP Camera Tool	
apple Anonymous	Http://192.168.1.163:8090 Http://192.168.1.128	

IP Camera Tool Windows

The IP camera tool should find the camera's IP automatically after you plug in the network cable. If not, please make sure that DHCP is enabled on your router and that MAC address filtering, firewalls and anti-virus are disabled temporarily until the camera is set up.

Double click the IP address of the camera; Safari will prompt you for a username and a password. Enter the username **admin** and leave the password field blank. This is the default login information. You will then see the camera's login page.

User	Ī		Defaul	t Username is admin
Password		[[with no	o password .

When you log in for the first time, it will request that you modify the default username and/or password . Input the New username, New password and Confirm the password, click Modify to

Foscam Digital Technologies LLC

complete the modification. You will now use the new username and password to log in to the camera in the future.

The Login Screen

mode; for Safari, Firefox, Google Chrome, please choose Server Push mode; for mobile phone, please choose the third mode.

Mobile Phone

Note:

Since ActiveX mode is not compatible on Mac, you will always click the **Server Push Mode** option to access the camera, whether you are on **Safari, Chrome, or Firefox**.

Once you click on Server Push Mode, you should be taken to the live video screen immediately.

The Live Video Page

4. Wireless Connection Setup

Wireless Lan Settings support Infra(Do wireless Ian settings manually) ,WPS (Wi-Fi Protected Set-up) and Adhoc modes

If your router does not support WPS function, please go to chapter 4.1 and make wireless connection settings manually.

If your router supports WPS function, please go to chapter 4.2 and make wireless connection settings quickly.

If there is no wireless router, please read Wireless Settings in the User Manual about how to set Adhoc.

4.1 Infrastructure Mode

Step 01): Please choose "Device Management" and goes to the option Wireless LAN Settings ,

click "Wireless LAN Settings". Then enable "Using Wireless LAN".

Click the Scan button and the camera will detect all WIFI devices around the area. It should also display your router in the list.

Wireless LAN Settings

<u>Step 03</u>): Please click on the **Submit** button after all settings have been entered, the camera will reboot. After the camera has completed the reboot process, wait 10 seconds and disconnect the network cable.

The LAN IP address will disappear on the window of IP Camera Tool when the camera gets restarted. Just wait for around 1 minute, the camera will get wireless connection, and the LAN IP of the camera will be showed again on the window of the IP Cam Tool. You have done wireless connection of the camera successfully. If the camera has a dynamic IP, after the wireless settings, the IP will be changed.

Note

If fail to make WiFi connection, please make sure wireless signal is strong enough first, then you can refer to seller or us for help.

4.2 WPS (Wi-Fi Protected Set-up)

Step 01) Press and hold the RESET button for four seconds.

Step 02) Press the WPS button on your router **within 60 seconds**. The WPS button is usually on the back or side of your router. On some routers, you may need to log in to the web interface and click on an on-screen button to activate the WPS feature. If you are not sure where the WPS buttons is on your router, please refer to your router's User Manual.

The camera will automatically create a secure wireless connection to your router. If you have plugged in the network cable, please plug it out. While connecting, the green network light on

RJ45 will blink and the wireless settings will take effect. The IP Camera Tool will search the camera's LAN IP. Make sure the PC and the camera share the same subnet.

Note

1 During the WPS Settings, you must press the Reset button only for four seconds, or else, the camera may be reset back to factory default settings if you press and hold on the reset button above 10 seconds.

2 The security mode of router cannot be WEP, or else the WPS settings may be failed.

5. Remote Access Setup

We have been able to access the camera within the LAN network, but how to access the camera via WAN or via internet? We have to do Remote Access Settings before we want to access the camera outside the LAN network.

What is the HTTP Port no. and How to change it ?

1) Default HTTP No.: 80

All the cameras' default http no. is 80. For example, if the LAN IP link of the camera is http://192.168.1.35, it says that the camera's http port no. is 80, if the LAN IP link of the camera is

http://192.168.1.35:88, it says that the camera's http port no. is 88. Port 80 could be blocked when accessing via internet, we need to change port 80 to another one like 88, or 85 as you like, which will not be conflict with other existing ports like 25, 21.

2) Change the default http no.80 to another one like 88, or 85 etc.

How to assign a different HTTP Port No. and fixed the LAN IP of the camera by the IP Camera Tool ?

<u>Firstly</u> Open the IP Camera Tool, and select the camera you would like to change the port for. Right click on the IP address, and click on "Network Configuration", this brings up the network configuration box as shown:

00	IP Camera Tool
FI8916W Foscamdemo FI8909W Foscamdemo FI8918W Foscamdemo FI8910W Foscamdemo FI8904W	http://192.168.1.180:8916 http://192.168.1.212:8090 http://192.168.1.206:88 http://192.168.1.211:1030 http://192.168.1.214:8094

Setting up Remote Access

First, check to see if your ISP (Internet Service Provider) provides a Static WAN IP address service or a Dynamic WAN IP address service. This guide has been divided into two different sections of setting up remote access, one for Static IP addresses and one for Dynamic IP addresses.

If your ISP provides Static WAN IP Service please go to Chapter 5.1.

If your ISP provides Dynamic WAN IP Service please go to Chapter 5.2 directly .

5.1 Static IP user

Static IP users do not need to set DDNS service settings for remote access. When you have finished connecting the camera using LAN and port forwarding, you can access the camera directly from the Internet by the WAN IP and port number.

• How to Obtain the WAN IP from a public website

To obtain your WAN IP address, enter the following URL in your browser:

http://www.whatismyip.com. The webpage at this address will show you the current WAN IP.

Get to know the WAN IP address of the router

Access the IP Camera from the Internet

You can access the IP Camera from the Internet (remote access). Enter the WAN IP address and port number in IE browser or other browsers you use. For example, <u>Http:// 183.37.28.254:85</u>

Note

Make sure port mapping (or also known as port forwarding) is successful. You can do port mapping in two ways.

- Enter the setting page of the router to enable UPNP function. Then login the camera as administrator, choose UPnP Settings to enable UPNP and make sure the state is "UPnP success".
- 2) Do port forwarding manually.

If your router has a Virtual Server, it will do port mapping. Please add the camera's LAN IP and port which you set in basic network settings to the Virtual map list.

Note: If you plug the camera in a router, it will have dynamic IP address and you need to set DDNS service settings to view it remotely.

5.2 How to configure Remote Access Settings (For dynamic IP user)

DDNS is a service that allows your Network Camera, especially when assigned with a dynamic IP address, to have a fixed host and domain name, you can access the camera directly from the Internet by the domain name and port number.

① Make Port Forwarding of the HTTP Port of the camera

What is port forwarding?

If you have no concept of Port Forwarding, please open the webpage

http://portforward.com/help/portforwarding.htm to learn some knowledge of Port Forwarding.

Or Use Google to check out what is port forwarding.

How to do port forwarding within the router ?

Example: The camera's LAN IP address is http://192.168.1.35:88,

Firstly, login the router, goes to the menu of Port Forwarding or Port Trigger (or named Virtue

Server on some brands of router). Take Linksys brand router as an example, Login the

router, and goes to Applications & Gaming->Single Port Forwarding.

Secondly, Create a new column by LAN IP address & HTTP Port No. of the camera within the router showed as below.

	SYS °b	y Cisco					Firms	e Version: v1
						Wireless-N I	Iome Router	WRT120
Applicatio Gamin	ons& ng	Setup Wir Single Port Forward	eless Securi Ing Port Range I	ty Acce	ess Restrictions	Applications & Gaming	Administration	Statu QoS
Cincilla Dect I	Tanuartan	External Port	Internal Port	Protocol	To IP Address	Enabled		
Single Port Forwarding			(ere)		192.168.1		Help	
Applic	None V	-22		1	192.168.1			
	None V				192.168.1			
	None V				192.168.1			
	Neee M				192.168.1			
(and the second	None M	68	88	Both 🐱	192.168.1 35		Fill the LAN IP	of the
Camera				Both 👻	192.168.1		the last section	ist input 35.
		fill the port	no. 88 of the	Both 🛩	192.168.1			
Assign a	name as	External an	d Internal Port	Both 💌	192.168.1			
you like	nere	*		Both 💌	192.168.1			

Port forwarding

② Use domain name to access the camera via internet

Each FOSCAM camera has embedded a unique DDNS domain name when producing, and the

format of domain name is <u>xxxxxx.myfoscam.org</u>. On the bottom of the camera body, you can see the domain name sticker.

Here take <u>camera.myfoscam.org</u> for example. Go to option of **DDNS Service Settings** on the administrator panel, you can see the domain name.

The default FOSCAM DDNS status is closed, if you want to use it, please enable it first.

FOSCAM		Outid	oor Waterproof IP Camera
Device Status Alias Settings	DDNS Service Settings		
Users Settings	Manufacturer's DDNS	\frown	
Multi-Device Settings	Enable	(🖂)	Enable FOSCAM DDNS
Basic Network Settings	Manufacturer's Domain	camera.myfos	scam.org
Wireless LAN Settings	Validity Queries		Contraction of the Contraction o
ADSL Settings			
UPnP Settings			
DDNS Service Settings	Third Party DDNS		
Mail Service Settings			
MSN Settings	DDNS Service	None	×
FTP Service Settings		Submit Re	fresh

DDNS Service Settings Window

Now you can use http:// Domain name + HTTP Port to access the camera via internet.

Take hostname <u>camera.myfoscam.org</u> and <u>HTTP Port no. 88</u> for example, the accessing link of the camera via internet would be <u>http:// camera.myfoscam.org:88</u>

Foscam domain name is free for three years, three years later, if you want to continue using the account, you need to pay for it.

On the option of **DDNS Service Settings**, click **Validity Queries** to check the validity and you will see the renew link.

Note

If you want to use Thirty Party Domain name, please read **DDNS Service Settings** in the User Manual about how to set it.

6. Other Settings

Security

At your first time logging in the camera, please go to "**Users Settings**" panel and reset the username or password to prevent intruders connect your device. The default username is admin with a blank password.

FOSCAM		Outdoor Waterproof IP Camera		
Device Status	Users Settings			
Alias Settings				
Date & Time Settings		Deserverd	Oreun	
Users Settings	User	Password	Group	
Multi-Device Settings	admin		Administrator 👻	
Basic Network Settings			Visitor 🗸	
Wireless LAN Settings			Visitor	
ADSL Settings			NC-14	
UPnP Settings			VISITOR	
DDNS Service Settings			Visitor 💌	
Mail Service Settings			Visitor 💌	
MSN Settings			Visitor 🗸	
FTP Service Settings			Visitor 🗸	
Alarm Service Settings		Submit Refresh		
Opgrade Device Firmware				

Congratulations!

You have finished the quick installation of the camera. You can take time to play the camera.

<u>Please refer to the electronic user manual burned in the CD-ROM</u> for other settings.

Other advanced software settings, such as <u>Alarm Service Settings</u>, <u>Mail Service Settings</u>, <u>Alias Settings</u>.
