IMPORTANT INSTRUCTIONS

When using any electrical appliance, some basic safety precautions should always be observed to reduce the risk of fire, electric shock, and/or injury to persons. Specifically:

1. Read all instructions carefully before using the appliance.
2. This appliance gets very hot when in use. To prevent burns, do not touch hot surfaces with bare skin. Use the handle when moving the appliance. Keep all flammable materials, such as furniture, pillows, bedding, paper, clothing, and curtains at least 3 feet (90 cm) from the front and top of the appliance also avoid contact with the sides and back.
3. The appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.
4. Always disconnect the plug from the power outlet when the appliance is not in use.
5. **Do not operate the appliance with a damaged cord or plug, after faulty operation, or when it has been dropped or damaged in any way. Contact the nearest authorized service facility for examination, electrical or mechanical adjustment, or repair.**
6. Do not use the appliance outdoors.
7. This heater is not intended for use in bathrooms, laundry areas, or similar indoor locations. Never position the appliance where it may fall into a bathtub or come in contact with water.
8. Do not run the power cord under carpeting. Do not cover cord with throw rugs, runners, or the like. Keep the cord away from any passageways where it could be tripped over.
9. To completely turn off the appliance, push the ON/OFF button (A), and then unplug the heater.
10. Do not wrap the cord around the appliance immediately after use.
11. Do not insert or allow foreign objects to get into the air intake or air outlet grille, as this may cause electric shock or fire, or damage the appliance.
12. To prevent a possible fire, do not block air intake or air outlet grille in any way. Do not use the appliance on soft surfaces, such as beds, where the openings may become blocked.
13. Do not cover the appliance while it is functioning in order to avoid overheating and the risk of fire.
14. The internal parts of the appliance can become very hot or produce sparks during operation. Do not use the appliance in areas where gasoline, paints, or other flammable liquids are used or stored.
15. Use this appliance only as described in this manual. Any other use not indicated by the manufacturer may cause fire, electric shock, or injury to persons.
16. To prevent current overload and blown fuses, make sure that no other appliance is plugged into the same outlet or into another outlet wired into the same circuit.
17. It is normal for heater's plug and cord to feel warm to the touch. However, an excessively hot or deformed plug or cord is not normal and may be the result of a defective electrical outlet. Defective outlets must be replaced before using the heater. Plugging the heater into a worn outlet may result in overheating of the power cord or may cause the risk of fire.
18. If the supply cord is damaged, to reduce the risk of malfunction it must be replaced by the manufacturer, its service agent, or a licensed and qualified professional.
19. Do not use this appliance with an

extension cord or outlet strip. Connect the appliance directly to a suitable outlet.

20. Make sure that the plug is fully inserted into the outlet. Wall outlets may deteriorate with time, so check the plug periodically for signs of overheating or deformation. If the outlet has deteriorated, stop using it and have it repaired.
21. Check that neither the appliance nor the power cord have been damaged during shipping.
22. Make sure that no styrofoam or other packing materials remain in the appliance.
23. The first time the appliance is used, run it at the maximum power for at least two hours. During this time, ventilate

the room thoroughly to eliminate the “new” smell released by the appliance. It is completely normal for the appliance to emit “creaking” sounds the first time it is run.

24. **CAUTION: To prevent electric shock, make sure the wide prong of the plug is inserted in the wide slot of the outlet.**
25. Do not place the heater near a bed because objects such as pillows or blankets can fall off the bed and be ignited by the heater.
26. Extreme caution is necessary whenever the heater is left operating unattended.
27. Do not open the appliance. No user-serviceable parts inside.

Additional safety features

1. **Overheating protection:** a safety device switches the heater off if it **accidentally overheats** (e.g.: air intake and outlet grilles obstructed, filter clogged). In this case remove the plug from the power outlet and leave it unplugged for a few minutes, eliminate the cause of overheating, then plug the fan heater back and turn it on again.

seconds to start on again.

Note: To avoid overheating the appliance, do not cover it.

If the appliance shuts off unexpectedly:

- Check that the appliance is receiving power.
- Check that the appliance is in the vertical position and on a flat surface, as the safety tip-over switch may have been tripped.
