

# QTALK

## 1 Your benefits

Qtalk is a software solution enabling telephony through the data channel on mobile end-devices and Windows PCs. Qtalk offers highest voice quality in mobile networks and is applicable independently of mobile operators. Qtalk is applicable in a multitude of networks (GPRS, EDGE, UMTS, HSPA, WiFi) and stands out by its user friendly handling. The integrated user list allows instant viewing of the status of the contacts (online, busy or offline). The usage of the data channel also offers Qtalk users money saving opportunity. Qtalk enables its users to call within "Q-Net" for the cost of the occurring data traffic. Even if both parties calling each other are in different countries they only pay for Qtalks' usage fee and the occurring data traffic (as long as they are situated in their national network). Frontiers thus become insignificant and international telephony is possible at attractive conditions. Other parties outside "Q-Net" (such as regular landline and mobile numbers) can be called at low tariffs using SIP (Session Initiation Protocol).

- Qtalk offers the possibility to be reachable everywhere at any time.
- You can check the online status of your contacts in your personal user list.
- One user account can make calls from mobile device or Windows PC.
- The integrated "Invite"-function allows you to add more contacts to your personal user list.
- You can check the data usage caused by your calls directly on the display of your mobile device.
- Make national and international phone calls at the price of national data traffic on "Q-Net" (both Qtalk users located in their national network) in a multiplicity of networks GPRS, DGE, MTS, SPA, Wi-Fi)..
- There are not additional charges for calls to other providers nor minute tariffs in "Q-Net".
- Calls to public telephone (mobile and line) networks can be made through SIP at attractive tariffs from within the application.

## 2 **How to install Qtalk Nokia Symbian Version (Microsoft Windows mobile 6.0 and higher, BlackBerry and iPhone OS version also available)**

### 2.1 Requirements

In order to run the Qtalk application, your mobile phone has to comply with the following requirements:

- Symbian OS™ 3rd edition based mobile phone.
- Internet access, sold by your phone service provider and a suitable Internet Access Point configuration. WIFI access can be used also, if your phone has WIFI access opportunity.
- About 900kb of free internal memory, Qtalk will work only from internal memory.  
Note: **do not install on memory card.**
- Basic knowledge of your mobile phone.

## 2.2 Installation

In order to install Qtalk application on your mobile phone, just follow few simple steps:

1. Open the following address in your phone's web browser:  
<http://dl.qporter.com/qtalk/qtalk.sis>
2. Confirm download of Qtalk application.
3. Depending on your browser type, directly open downloaded application or execute downloaded file from file manager application<sup>1</sup>.
4. Go through installation questions confirming each of them and choose internal memory as destination of Qtalk installation. Please read carefully all messages, especially about Emergency Calls.

5. Exit web browser or file manager and you are **ready to go online!**

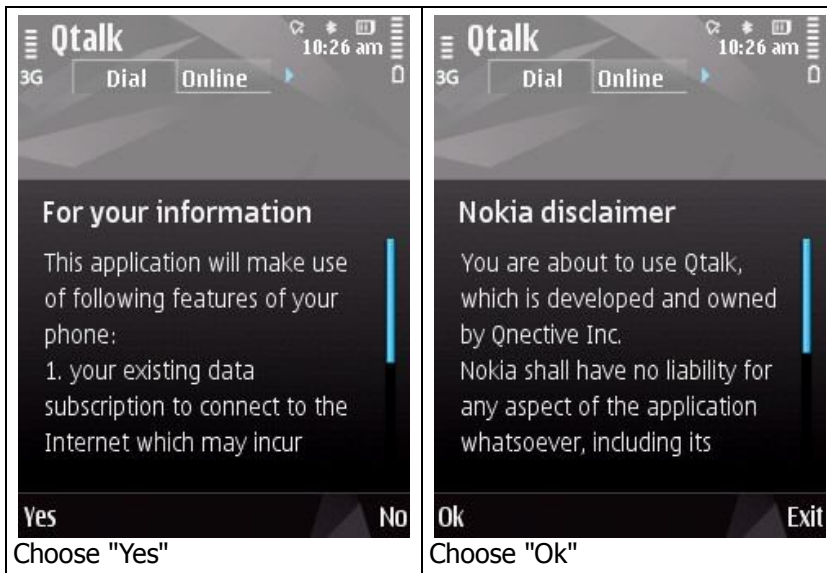

---

1 File Manager application is integral part of your Symbian OS™

### 3 First Start

First start of the application is very important because you will be able to login with your existing account or register a new one. In case of any failure you can always fix login details or register an account from application main menu as described later in this document. To successfully login just follow few simple steps and:

1. Go to applications menu<sup>2</sup> of your mobile and start Qtalk.
2. Start Qtalk and go through following screens. Please read carefully each message.

3. Define behavior of Qtalk. Default settings are recommended for all users. Keep in mind that SIP connections – for example to fixed landline numbers – are only available to users with appropriate subscriptions.

	<p><b>Auto start:</b></p> <ul style="list-style-type: none"> <li>• when on, Qtalk will automatically start in background<sup>3</sup> when you turn on your mobile.</li> <li>• when off, you have to start Qtalk manually each time you turn on your mobile</li> </ul>	<p><b>SIP call confirm:</b></p> <ul style="list-style-type: none"> <li>• when on, you will be notified about each connection over SIP</li> <li>• when off, you won't be bothered by messages about SIP</li> </ul>
--	---	---

<sup>2</sup> Refer to the user manual provided with your mobile phone.  
<sup>3</sup> Refer to the user manual provided with your mobile.

4. Enter your login and password.

	<p><b>Login:</b> Enter your login to the Qtalk application.</p>	<p><b>Password:</b> Enter your secret password, provided by your Qtalk Provider or completely new in case you don't have already registered account. Keep in mind that registration is <b>limited by your service provider</b> and you can't create new accounts without appropriate subscriptions<sup>4</sup></p> <p><b>Hint:</b> Your password is not case sensitive.</p>
---	---	---

5. Login to your account or register a new account.

	<p><b>Login:</b> choose login to go online.</p>	<p><b>Register:</b> n.a. if you have already an account provided by your Qtalk Provider (choose register only if you want to create a new account).</p>
---	---	---

6. Select your default Internet Access Point.

---

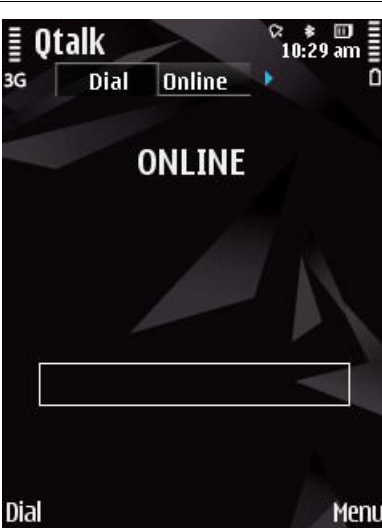

4 For more informations contact with your carrier.

 A screenshot of the Qtalk application's connection selection screen. The top status bar shows 'Qtalk', '3G', 'Dial', 'Online', and the time '10:28 am'. The main content area is titled 'Select connection:' and features three options: 'Search for WLAN' with a magnifying glass icon, 'Internet' with a globe icon and the text '"apif"', and 'WAP services' with a circular icon and the text '"Era Omnix TT"'. At the bottom, there are three buttons: 'Options', 'Connect', and 'Cancel'.	<p>Select connection suitable to your Internet Access Point (IAP).</p>
---	--

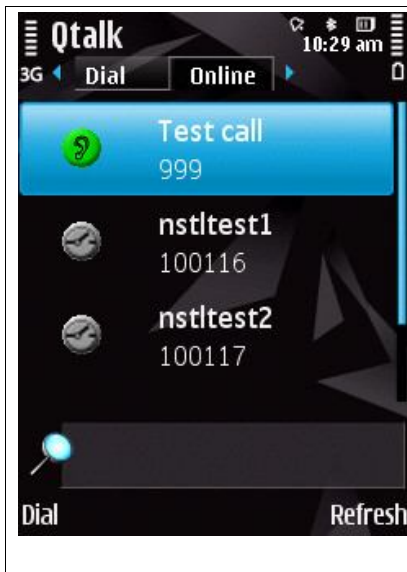

## 4 Interface of Qtalk

Interface of Qtalk is separated into four tabs at the top of your screen. You can switch between them using navigation keys of your mobile.

### 4.1 Dial tab

 A screenshot of the Qtalk application's 'Dial' tab. The top status bar shows 'Qtalk', '3G', 'Dial', 'Online', and the time '10:29 am'. The main content area has a dark background with the word 'ONLINE' in large white letters. Below it is a white rectangular input field. At the bottom, there are two buttons: 'Dial' on the left and 'Menu' on the right.	<p>This is the main screen where you can manually enter phone numbers and the last unanswered call, connection quality, current status of the call (dialing, ringing, speaking) and many more.</p> <p>You can also access main menu which will be described later.</p>
---	--

#### 4.2 Online tab

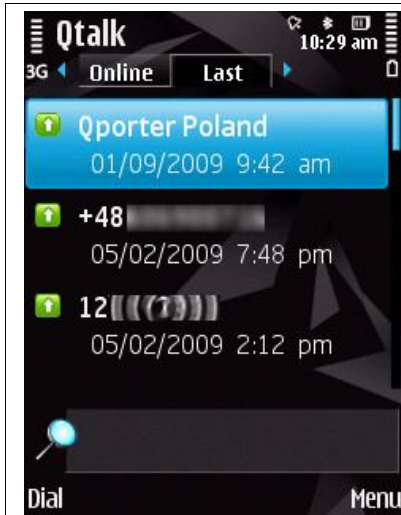

From here you are able to check availability of your partners. Icons, on the left side show status of your contact.

- Green: online and available.
- Yellow: online but busy.
- Grey: offline

**Hint:**

At the top of your Online tab you will find a "Test call" contact. This is an echo service. You can call this user to check quality of your connection. Do it as soon as possible. Test call will disappear after few sessions with Qtalk.

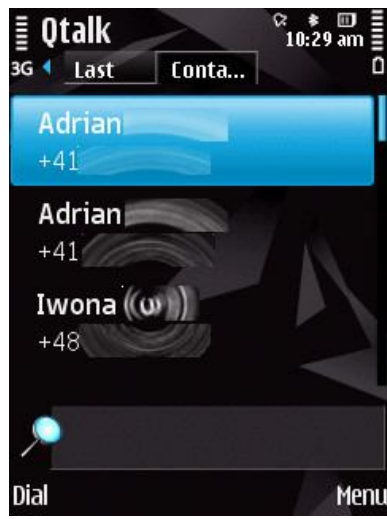

#### 4.3 Last tab

From here you can check your call logs. This tab is similar to your phone's call log but the difference is that calls to the other Qtalk users are only visible here.

By pressing "Dial" you can directly call to the selected user.

#### 4.4 Contacts tab

 <p>The screenshot shows the Qtalk application interface. At the top, the status bar displays '3G', 'Last', 'Conta...', and '10:29 am'. Below the status bar, the title 'Qtalk' is visible. The main content area shows a list of contacts: 'Adrian +41' (highlighted in blue), 'Adrian +41', and 'Iwona +48'. At the bottom, there are two buttons: 'Dial' and 'Menu'.</p>	<p>From here you can access your contacts. This list is exactly the same as your phones' contact list.</p> <p>By pressing "Dial" you can directly call to the selected user.</p>
--	--

## 5 Main menu

### 5.1 Menu -> Status

 A screenshot of the Qtalk application interface. At the top, it says 'Qtalk' and '3G'. Below that, there are buttons for 'Dial' and 'Online'. The status 'ONLINE' is displayed in large letters. A menu is open, showing options: 'Show open apps.', 'Status', 'Settings', 'Check quality', 'Help', and 'Invite'. The 'Status' menu is expanded, showing sub-options: 'Login', 'Logout', and 'Register'. At the bottom, there are 'Select' and 'Cancel' buttons.	<p><b>Login:</b> use to go online</p> <p><b>Logout:</b> use to go offline, in case you need to change settings which are available only in offline mode – for example login or Internet Access Point.</p> <p><b>Register:</b> use to register a new account.</p>
--	--

### 5.2 Menu -> Settings

 A screenshot of the Qtalk application interface, similar to the previous one. The 'Settings' menu is expanded, showing sub-options: 'Options', 'Change IAP', and 'Login data'. The rest of the interface is the same as in the previous screenshot.	<p><b>Options:</b> use to change behavior of Qtalk – auto start and SIP notifications.</p> <p><b>Change IAP:</b> use to change Internet Access Point. (do logout first)</p> <p><b>Login data:</b> use to change your login name, password, server address or default prefix for outgoing connections. (do logout first)</p>
---	---

### 5.3 Menu -> Check quality

#### Check quality:

use this option to enable Quality of Service (QoS) monitor. Picture on the right, notice the new QoS monitor in the top left corner.

#### Help & About:

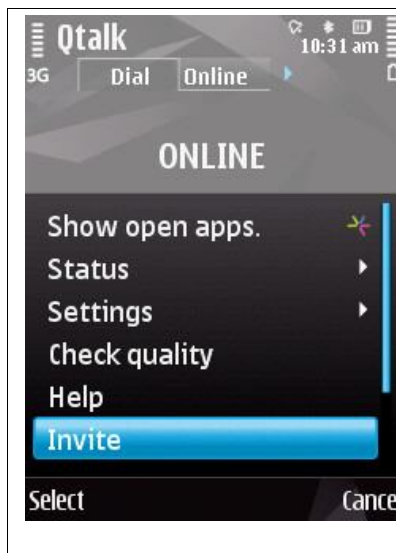

this is the best place to start if you still have problems with your Qtalk application.

#### Exit

(below About): use to exit from Qtalk.

### 5.4 Menu -> Invite

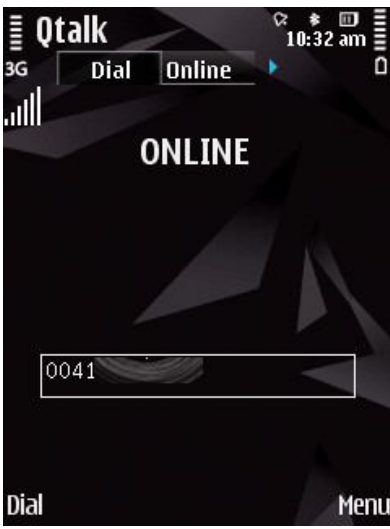

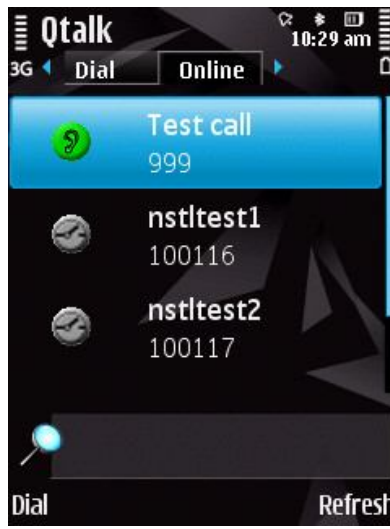

#### Invite:

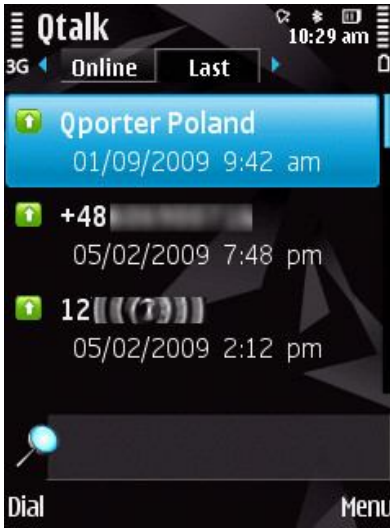

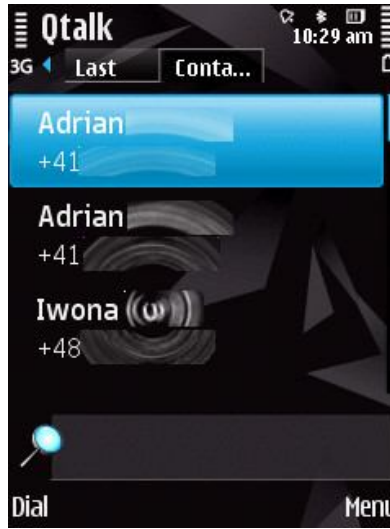

use to invite your friends or colleagues to "Q-Net". Just enter a phone number and we will send an sms message with invitation.

## 6 It's time to call somebody

You are able to make calls from any tab of Qtalk. It is completely up to you which way you choose.

	
<p>The simplest way is to enter phone number in the <b>Dial</b> tab and press the Dial button. To avoid possible problems always remember to use international prefixes. Qtalk is able to guess your default prefix during installation but this is not possible in all cases.</p>	<p>Go to the <b>Online</b> tab, select somebody from your contacts and press Dial.</p>

	
<p>Go to the <b>Last</b> tab, select somebody from your list and press Dial.</p>	<p>Go to the <b>Contacts</b> tab, select somebody from your list and press Dial.</p>
