Protect your child and family
against unwelcome computer use

Prevent bullying, threats or contact with strangers!

Limit or block instant messaging, social media (Facebook) and more!

Unique filters against gambling, sex, drugs and gaming sites!

Determine when and for how long your child is allowed on the computer!

YourSafetynet®
for safe and aware computing

Protect your child and family
against unwelcome computer use

Promote safe and aware computing within your home

Security on the internet is not a given! Special measures must be taken to provide the needed security.

The internet is part of everyday life. It facilitates our work and studies providing entertainment, and yielding endless discovery possibilities. However the internet also provides a vehicle for dangerous predators, and those that seek to take advantage of the unwary and unprotected computer user.

The media, and our direct environment as reflected through the Internet, provide daily examples of the downsides and risks of using the internet. Children who bully each other using chat lines, and e-mail, and children who become addicted to chatting, online gambling, or webcam sex and unwittingly end up on porn sites are very much at risk without some protective system in place. With 'internet security' people mostly think of anti-virus software, however these packages do not protect against dubious information, or risky activities.

Removing the threat

Since personal safety on the internet isn't assured, we have developed YourSafetynet home. This unique software continuously monitors internet and computer activity to protect your child and family. YourSafetynet home regulates and controls internet and computer use. Activities you have prohibited, or that threaten your child, are instantly stopped by this patented software package.

Is your child really doing their homework?

Rules concerning computer use are common, even in the home. "No playing computer games if there's homework to be done" and "only chat in the early evening" are some examples. But how do you keep tabs on whether these rules are being respected?

YourSafetynet understands and monitors the activities your child carries out on the computer and helps you to enforce the family rules you want followed. As such YourSafetynet can differentiate between internet and media use and permit or prohibit each on an individual basis. Moreover, you can select on a daily or weekly basis the times during which internet and media use is permitted or prohibited. You can permit or prohibit activities such as chatting, gaming, using social media such as Facebook and more. The unique combination of features that YourSafetynet makes while monitoring the internet and media use, offers the option to provide comprehensive access to the internet during homework periods of use, while simultaneously and temporarily if required, prohibiting media group applications. Now you will know your entire family is fully protected and your children are really doing their homework when they say they are!

YourSafetynet home doesn't take away the pleasurable, educational function of the computer and the internet, but rather, protects your child and family against unwelcome and risky intrusions.

THE FACTS: Research undertaken by Rutgers Nisso Group[1] shows that as many as 57% of girls and 40% of boys in secondary education are confronted with cyber sex. Leaving cyber bullying, gambling and gaming addiction and misuse out of the equation, half of all children have therefore already undergone negative experiences whilst using the internet connected computer. This highlights the increased risk children are exposed to while using the computer and internet. Many parents are aware of this and as a result literally place the computer in a public place in the home to insure that the computer is always used with monitoring and supervision nearby.

However, direct parental supervision can often be a source of controversy and discord within the family. Installing YourSafetynet on your home network removes the potential for conflict that often occurs with direct parental intervention, and allows your children to have some degree of privacy as they do their home work or experience sanctioned activities with their computer. YourSafetynet home gives you the parent peace of mind that your children are protected, while at the same time providing you children and family with the rewarding, and educational experience that can come from access to the internet.
Unique security message

DON'T YOU WORRY I'VE GOT EVERYTHING UNDER CONTROL!

Chatting online is popular among children. It can be great fun and the children can make some great new friends online. The problem with online chatting is that it is generally anonymous, so the person that they are chatting to may not be who they say they are.

There are potential risks in communicating to people that you don't know, and unfortunately some children have been hurt having gone to meet the 'friends' they have made online. It could also concern persuading and manipulating the child to undertake activities they would never do under normal circumstances, such as webcam sex. There have also been cases of children being bullied or threatened online in chat environments.

YourSafetynet protects against malicious chatters. As soon as your child begins a chat[2], a message is placed in the chat window of the recipient: **"Caution! This user is YourSafetynet protected. Your computer and chat information may be stored for tracking purposes"**.

This message scares off risky and predatory chatters. The police, and special internet security organizations, can nearly always discover the identity of the chat-abuser with this information. YourSafetynet is the only security package to send such a warning message, and as a result providing a significant deterrent against computer misuse.

YourSafetynet home

The only comprehensive security concept, effective and yet simple to use

Very simple to use
YourSafetynet home is very user-friendly. A manual isn't really needed.

Internet and Media filter
Blocks categories such as sex, gambling, and drugs with the internet filter. The media filter blocks categories such as chatting, games, social media (Facebook), and p2p.

Day limits
Control how long users have access to the internet, media categories or the computer.

Day periods
Regulate computer use and determine the period that a user has access to the internet and media categories. So no unnecessary discussions at dinner time or in the evenings; YourSafetynet automatically switches off the internet, the permitted media categories or the computer after two messages.

Security settings
YourSafetynet home offers numerous extra security options:
- Blocks the webcam or USB storage such as USB sticks.
- Closes the user down when they obstruct YourSafetynet.
- Saves the chat history, user details and IP addresses of chatters.
- Saves visited websites and software used.
- Informs you when a user tries to circumvent or obstruct the software.

Security message
Unique warning message sent during chatting[3] to scare off dubious chatters.

Automatic screenshots
If a threatening situation arises the child can save a screenshot with a single click to be used later as evidence.

Black and white listing
Block extra activities, such as specific websites or software. Permit specific activities such as the school's website, or educational software.

User profiles
YourSafetynet can set up individual rules for each family member. To do so YourSafetynet automatically links each user of your computer to a YourSafetynet user profile.

Help & Tips
YourSafetynet includes an extensive Help section with a user manual and a list of FAQs. In addition YourSafetynet is supported by a professional sales & service organization.
