HITACHI

HITACHI Inspire the Next

Cutting-edge projection for all

At the heart of the Hitachi philosophy is innovation. Our new Multi Purpose projector range brings together the finest features for business and education. Whichever model you choose, you'll find top-of-the range picture quality, security and networking, in a user-friendly package. Hitachi is dedicated to lowering costs and protecting the environment, so the range also features longer-life parts and energy-saving settings.

Outstanding picture quality

Exceptional contrast

Hitachi¹s networkable models feature a 2000:1 contrast ratio which you'd expect from high-end projectors. In addition these models also benefit from our Active Iris technology. This automatically ensures optimal image contrast and depth perspective during both bright and dark scenes – for the brightest whites, blackest blacks and boldest colours.

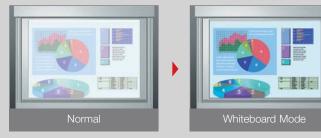

High picture quality

In this projector range, Hitachi brings together a variety of innovative features for superior picture quality. Motion Adaptive Progressive Scan reduces line flicker, boosting resolution and smoothing moving images. Noise Reduction boosts clarity. And Hitachi's unique Equalising Gamma Function helps you customise gamma and colour balance to suit your personal picture preferences.

Blackboard and Whiteboard Modes

Projecting onto coloured backgrounds can make images appear dull – whilst shiny backgrounds can make them uncomfortably bright. With our Blackboard and Whiteboard modes, you can ensure optimal brightness whether the screen is black, green or shiny white.

Daytime Mode

It can be harder to see a projected picture when the sun is shining brightly. Using Daytime Mode, projections are always vivid and colourful in a bright environment.

Virtually maintenance-free

Hitachi projectors are stylish, practical and cutting-edge – but we also work hard to ensure they are as green as possible at every

stage of their lifecycle. That's why the 1W Standby Mode is an important new feature on all Hitachi projectors.

A new European Directive may soon limit the power consumption of projectors in standby to 1W or less. But at Hitachi, we're one step ahead. As part of our Environmental Vision, we've already ensured that all the projectors have this power-saving feature. So from 2010, you'll save energy even if you need to leave your projector in Standby Mode.

This is one of many steps Hitachi is taking to help minimise our impact on the environment.

Hitachi's projectors use components which help in the overall reduction of their carbon footprint.

Super Hybrid Filter

The new Hitachi Super Hybrid Filter is the best you'll find on the market. It lasts an exceptional 6000 hours – to make maintenance less frequent and reduce replacement costs.

Long lamp life

Now you can benefit from longer lamp life than ever before. Using the new Eco Mode, lamp life is extended to more than 6000 hours* – equivalent to the projector being used for three hours a day over a period of ten years.

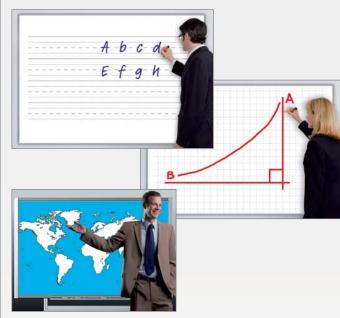

Long filter life

A Hitachi filter should last as long as the projector lamp. And because replacement lamps come with a new filter, you can simply replace both at the same time, making it unnecessary to clean the filter.

Usability

Template function

This unique Hitachi feature allows you to project lines, grids and maps onto a whiteboard, blackboard or flip chart, to make writing and drawing easier.

Audio Pass Through

Audio Pass through allows the user to listen to external speakers via the projectors audio output whilst in standby mode, so you experience audio without images. This feature preserves the lamp life when you only need sound.

My Button

This customisable feature allows the user to to assign a designated or frequently used function from the menu to this button. In addition the green button on the top of CP-X2520 and CP-X3020 clears the screen instantly.

Multi PC Mode

The Multi PC Mode is perfect for use in meetings and the classroom as it allows up to four people to project their PC screens at the same time via a network. (Network models only)

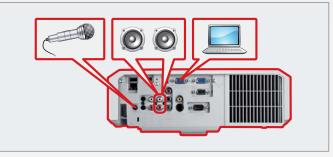

New OSD (On Screen Display) Menu and Input Source Naming

The new intuitive icons featured in the On Screen Display clearly identify the different functions and settings enabling easy navigation and installation. In addition, input Sources can be personalised so that they are easier to understand and identify – for instance, 'S-Video' can become 'DVD player'.

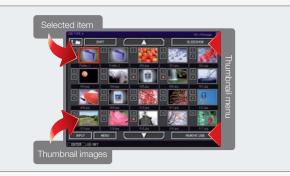

Microphone input and amplifier

The two 8 watt speakers and microphone system found on the CP-X2511N, CP-X3011N, CP-WX3011N and the CP-X4011N provide the user with a convenient audio solution.

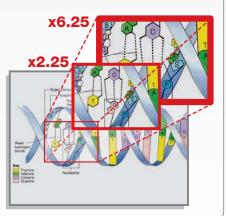

PC-Less Presentation

Start your presentations smoothly and quickly with Hitachi's PC-Less presentation mode. Simply insert a USB storage device and present, without the need for a PC. You can also select which slide or image to display from a list of thumbnails.

Zoom function

The new zoom function allows the user to select which area of their image they wish to enlarge. Great for teachers who wish to explain a particular part of a cliagram in detail. (Applicable to CP-RX79, CP-X2520, CP-X3020)

Advanced network functions (CP-X2511N, CP-X3011N, CP-WX3011N and CP-X4011N)

Messenger function

This clever function lets you send text to multiple, networked projectors instantly or at a specified time. This is ideal for projecting daily work schedules, university campus notifications, school activities or any information that needs to go out over a large area - fast.

Convenient networking functions

Now you can manage and control multiple projectors over your LAN. The projector can monitor and diagnose its own status, as well as that of other network applications. You can also schedule

My Image Function

the projector to turn on and off automatically. And all of this functionality can be easily accessed via a web browser.

Centralised reporting functions

Using a single PC, you can create detailed reports for all your networked projectors. This can make maintenance simpler – for example, by revealing any projector that isn't working or any projectors that are due for maintenance.

AN Administration room

Security

Transition Detector

Hitachi's range of Multi Purpose projectors are equipped with comprehensive security features to help protect your projector at all times.

If the projector is removed from its installed location, it triggers Hitachi's unique Transition Detector. This renders the projector inoperative unless a password is entered.

PIN-Lock

The PIN-Lock ensures only authorised people can use the projector by entering their unique PIN code. This screen can be branded to your company or educational establishment using the MyScreen function.

Security bar

Projectors are equipped with a security bar allowing a chain to be attached for physical security.
