

Radio Control Helicopters

Scream Wholesale are a **trade supplier, wholesaler, importer and dropship dropshipper** of **Radio Controlled Toy Helicopters**, also referred to as **RC HELIS**. **Radio Controlled Helicopters** are supplied as 2 channel or 2ch for short. 3 Channel or 3ch for short and 4 Channel all the way up to 6 Channel. Currently we only stock **rc helicopters** in the 2channel and 3 channel category as they are considered entry level.

3ch *RC Radio Controlled Helicopters* are as simple as forwards, backwards left and right, whereas the more complicated 4ch, 6ch helicopters are more of a hobby enthusiasts product and become much more difficult to fly with good understanding of avionics needed.

Radio Controlled Rc Helicopters in the 3ch category are often a fantastic gift or entry level helicopter for an enthusiast in the making

Skytech M68R HD Camera 2.4G 6-Axis Gyro RC Quadcopter Drone

HD Camera Helicopter M68R 2.4G 6-Axis Gyro RC Quadcopter Drone

The quadcopter dimensions are 12.4 x 12.4 x 3 which is a great size for outdoor flights, making it easy to see and control. The 6 axis gyro system is a big improvement over 3 axis gyro systems in some poorer quality quads available and increases the stability and controllability so that your quadcopter does exactly what you tell it to do.

Controlling this quadcopter is a great experience when you use the included transmitter. The transmitter features an LCD display and buttons to control all aspects of the device. On the transmitter are buttons to control the camera, enter flip mode, buttons to control trim for a stable hover and a button for headless mode which in my opinion is the best feature of this quad.

Headless mode utilizes a digital compass for controlling your quadcopter. When you activate headless mode your craft will move in whichever direction you push the control stick regardless of which direction the quadcopter is facing. This mode makes it simple for anyone to fly or to recover when the quadcopter gets too far away to see the orientation.

The built in camera is another good feature to have on this quadcopter allowing

you to record all of your flights.

Specs: Size: 31.5*31.5*7.5CM Channel: 4 Body Material: Plastic Control Mode: 2.4GHZ Charging Time: 45 minutes 3.7 500 mAh battery Camera: 480p-720p Flight Time: 7-9 minutes Headless Mode Strong and durable body Built in camera Spare parts readily available

**Package Includes: 1 x Quadcopter
1 x 2.4G Remote Controller (does not include 1.5v AA batteries)
1 x USB charging cable
4 x Rotating blade / propellers
4 x Prop guards
2 x Landing skids
1 x Screwdriver
2 x 3.7V 500mAh LiPO battery
1 x User Manual**

The camera comes with it's own power connector so when you're not using it you can unplug it and increase flight time. Camera quality is somewhere between 480p and 720p video, overall it's a decent camera for the price you're paying and the micro SD card you need for it is included.

Some other features include one button flip mode which you can activate and flip your craft in any direction, removable prop guards to protect your props from crashes, and a compartment for the battery. The battery compartment hides all the wires for your battery connections which helps protect them from damage and helps the quadcopter fly more aerodynamically. Another nice feature are the large multicolor LEDs mounted to the bottom which make it easy to flight at night.
