Internet use: up to 4 hrs 3G, up to 7hrs Wi-Fi
Audio Play: up to 28 hrs
Video Play: up to 7 hrs
Hotspot usage: up to 3.3 hrs (2 devices)

Charging Instructions:

1. Use the included micro-USB cable to charge the IPower™ for the first time from USB port or wall charger.
2. Charge the iPower device with the iPhone inserted and it will charge both devices. In this operation, the power source will charge your iPhone first until full, then will charge the iPower. LED light indicators light up progressively when iPower is charging. When all 4 lights are illuminated (no-flickering) both devices are fully charged.
3. The iPower will charge your iPhone 4 automatically upon insertion and detection of iPhone's battery status. After pre-charging your iPower & Phone, use the ON/OFF button to save the charge for efficient long term usage when mobile.

Battery Consumption

When iPhone and iPower case are connected to any power source, the power source charges the iPhone first. When the phone is charged up to 80%, the power source then charges the iPower case. If the power source is cut off iPower case becomes the main power supply (if the unit is in charge mode) until it is less than 5%, then the power is supplied by your iPhone.

On & Off button

To turn on the IPower, press the button on the back and the iPhone will make an audible sound that you're charging. To turn off the iPower, hold down the On/Off button 3 seconds and release. To ensure you're not still charging check your iPhone battery, it should not show a charging icon.
Performing this feature will allow your iPower to provide full backup power when needed For best results, charge your iPhone in the iPower nightly, and only activate your iPower case when your iPhone's battery power is at the halfway point.
Camera Flash: When using flash on the camera, for best results, remove the top cap of the iPower.

Sync

When iPhone is inserted in iPower, you are able to synchronize your iPhone with iTunes or other applications without removing the iPhone from the iPower case. It is recommended to use the original included micro USB cable, as other cables may not work properly.

Package Contents Included

- iPower Case for iPhone 4/4S
- Micro USB Cable
- User Manual
