Setting Up the Red to Work with the AgileCine Cineflex Conversion
User Manual V1.1 February 2015

To Communicate with the Red from the Cineflex:

Using the RED LCD:

Menu.Settings.Setup.Communications
       "Serial" Tab Select "REDLINK Command Protocol"   Hit "OK"

To Set Up HDSDI Output from the Red:

Menu.Settings.Display.Monitor Control
       "Monitor" Tab
              Select "Brain HD-SDI" Hit "OK"
                    Mode: "Overlay" Hit "OK"
                    Overlay: "Standard (RED)"
                    check "Enable"
                    check "Tools"
       "Priority" Tab
              Move "Brain HD-SDI" to second from top of list
                    "Brain LCD" should be at the top of list.

To Enable Control of the Motion Mount ND Filters:

Menu.Settings.Setup.Keys
       "Advanced" Tab

       Key Source: "Side SSD" Hit "OK"
       User Key: "S-SSD User 1 Press" Hit "OK"
       Key Action: "Motion Mount: Decrement ND" Hit "OK"

       Key Source: "Side SSD" Hit "OK"
       User Key: "S-SSD User 2 Press" Hit "OK"
       Key Action: "Motion Mount: Increment ND" Hit "OK"

Note: RED Epic sometimes looses it's mind and needs a reboot to default states:
1) Power RED off.
2) Power up by holding power button down for 20 seconds or until you hear fan blast on.
 3) Set-up the Serial and HD-SDI Monitor settings.
