

SOLAR GARDEN LIGHT USER'S MANUAL

HOW SOLAR LIGHT WORKS:

During the day, the solar panel converts solar power into the rechargeable battery. At night, the light turns on automatically by storing energy. How long the light last to illuminate depends on your geographical location, weather conditions and seasonal light availability.

CHOOSING AN IDEAL LOCATION:

Choose an outdoor location with full, direct sunshine where the solar panel can receive at least 6 hours of sunshine time each day. Shady locations will influence the battery to charge enough energy and shorten the working time of lighting at night. The selected location should not be near strong lighting sources such as street lights, which may cause light to turn off automatically, because there is a sensor inside to feel brightness and control the light working.

Solar light is ideal for night lighting of garden, lawn ect. You can also use it as this way to put the solar light outdoor at day and take back indoor for illuminating.

ATTENTION FOR FIRST TIME USE:

There is a button beside solar panel, please press it down to "ON" position, then the automatic system will start to work. When environment gets dark, solar light will light automatically. During day, solar light will turn off and store energy from solar panel automatically. If you press the button to "OFF" position, it will break off to keep energy. If light can not turn on automatically at night after 6 hours of charging at day, please check followings:

- 1) Make sure the power switch is turned to "ON" position.
- 2) To check and ensure that the battery is securely connected with the terminals.
- 3) Make sure that light is in a sunny location and not in a shady area. The solar panel must face to the sun.

PRECAUTIONS:

- 1) To note that the light is designed to work when ambience gets dark. If there is strong light sources nearby, the LED light may be very dim or not work at all.
- 2) Although the battery has been charged by manufacturer, the electric level will have been probably dropped when you receive it. Please charge it for a full day to realize maximum performance.
- 3) Always keep the solar panel clean. It will influence efficiency of charging if it is dusty.

REPLACE BATTER:

If the light stops working after it has been used for a long time (about over 18 months), maybe the battery is beyond its lifespan. You can open the cover of battery to change a new rechargeable battery.

PARAMETERS:

- 1) Time: 6~8 hours
- 2) Battery: AAA rechargeable Ni-MH battery
- 3) Light Source:1 LED

ORIGINAL:

Made In China
