1 Introduction

The *Kodak Digital Science™* Mode Setup Software 5000/7000 has been developed to enable you to customize applications using the *Kodak Digital Science Document Scanner* 5500 and 7500.

The Mode Setup Software offers a user-friendly interface which allows you to perform an initial installation or modification of an existing setup.

The following sections describe the installation requirements, installation procedure, logon procedure, general information regarding use of the Mode Setup Software, the Installation Instructions and the Installation Questionnaire, and the logout procedure.

Installation requirements

The following system and cabling requirements should be verified prior to attempting to use the Mode Setup Software.

Minimum system requirements

- IBM or IBM-compatible personal computer with access to the DOS command prompt.
- 640K RAM.
- 1.2 MB hard disk space.
- a 720K 3 1/2" disk drive.
- monochrome or color display.

Installation procedure

The installation procedure is as follows:

1. Insert the Mode Setup Software diskette into the disk drive of the PC.
2. Change to the directory (i.e., "mkdir setup" or "cd setup") where the software will be installed.
3. Copy the software from the diskette to the desired directory by typing:

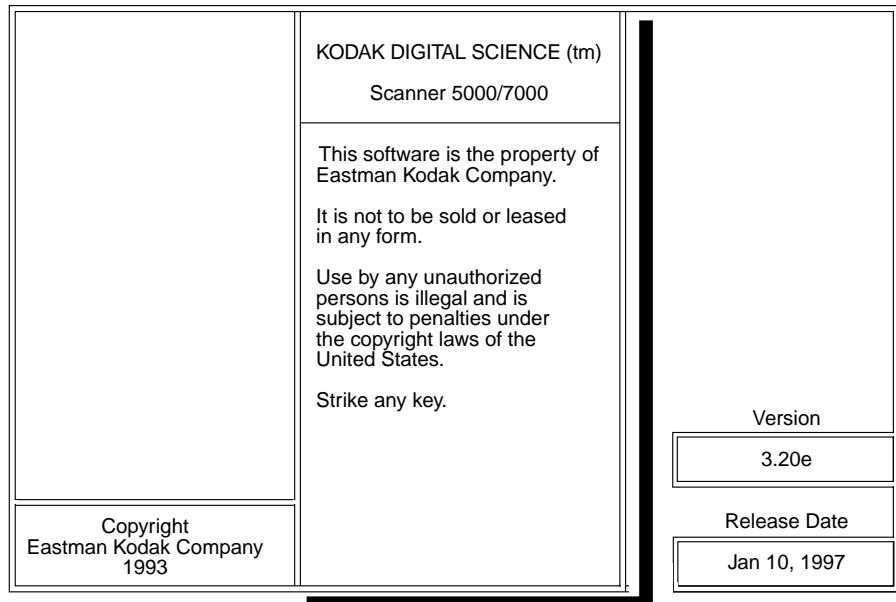

Copy A:*.*

If the disk drive on your PC is not designated as the A drive, substitute the correct drive in the above command string.

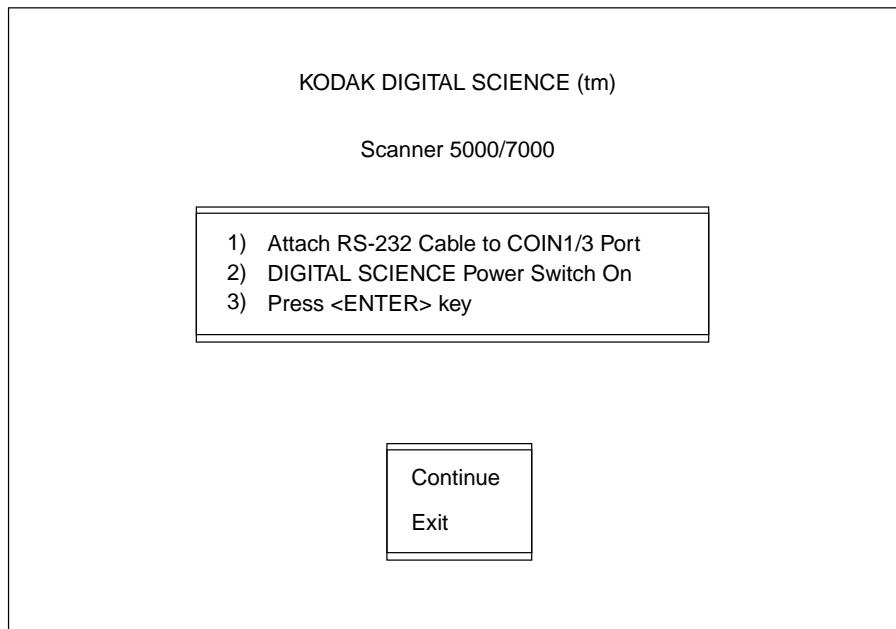

Logon procedure

After the installation procedure is completed, perform the following steps to logon to the Mode Setup Software:

1. Access DOS.
2. Change the directory to correspond to the directory designated during the installation procedure.
3. Type *SETUP* and press *Enter*. The following screen appears:

- Press any key to move to the next screen.

4. Verify that the RS-232 cable is connected to the COIN3 port and the Scanner 5500/7500 power switch is in the *ON* position.

5. Select *Continue*.

6. Press *Enter*. The following screen appears:

Configuration Items	Setting	DIGITAL SCIENCE Status
Display Language	English	READY
Measurement System	Inch	
Date Format	1990/10/10	
Time Format	00:00	
Set Time and Date		
Confirmation Tone Volume	Soft	
Confirmation Tones	Enabled	
Fixed Field Delimiter	Period (.)	
Printer Messages		
Version Numbers		
Load scanner from laptop		
Load laptop from scanner		
Mode Configuration		
End Session		

Using the Mode Setup Software

This section provides guidelines and conventions which will assist you in using the Mode Setup Software.

There are two levels of definitions:

- **Machine definitions**—which apply to all modes.
- **Mode definitions**—which apply to one mode.

Each option to be defined requires you to select a displayed option or enter a value.

If asked to select an option:

- Use the arrow keys to position the highlight cursor over the desired option.
- Press *Enter*.

If asked to enter a value:

- Typically, the highlight cursor will appear over the input field; if it does not, use the arrow keys to position the highlight cursor over the input field.
- Enter (type) the desired value, using the keyboard or numeric keypad.
- Press *Enter*.

- Most windows contain an option entitled *Previous Menu*. This option returns you to the previous menu after completing a definition. If you are not returned to the previous menu, or you want to return without altering the default or previously defined value, select the *Previous Menu* option.

To select the *Previous Menu* option:

- Use the arrow keys to position the highlight cursor over the *Previous Menu* option or press the Pagedown key to automatically position the highlight cursor over the *Previous Menu* option.
- Press *Enter*.
- If a message is received which indicates that an accessory is not installed, press *Enter* to continue. This message indicates that the option selected requires an accessory which is not physically installed and/or properly defined to the software. In either instance, contact your Kodak service representative to properly install and/or define the accessory.
- If a message is received which indicates that a selection is not available, press *Enter* to continue. This message indicates that the option selected is not available in the mode selected, or for the machine configuration.

Using the Mode Setup Software Questionnaire and Instructions

There are two pieces of documentation designed for use with the Mode Setup Software: the Installation Instructions, which provide information on how to install, access and use the software to define the available options; and the Installation Questionnaire, which provides a convenient form on which to record all of the machine and mode definitions.

Logout procedure

Once you have completed the installation, perform the following steps to logout of the system.

From the Machine Configuration window:

- Select *End Session* to exit to DOS.

or

From the Mode Configuration window:

- Select *Save & End Session* if you wish to save all of the definitions and return to the Configuration Selection window.
- Select *End Session* from the Configuration Selection window to exit to DOS.

2 Scanner configuration items

Accessing the Configuration Items Menu

Configuration Items	Setting	DIGITAL SCIENCE Status
Display Language	English	
Measurement System	Inch	
Date Format	1990/10/10	
Time Format	00:00	
Set Time and Date		
Confirmation Tone Volume	Soft	
Confirmation Tones	Enabled	
Fixed Field Delimiter	Period (.)	
Printer Messages		
Version Numbers		
Load scanner from laptop		
Load laptop from scanner		
Mode Configuration		
End Session		

Display language

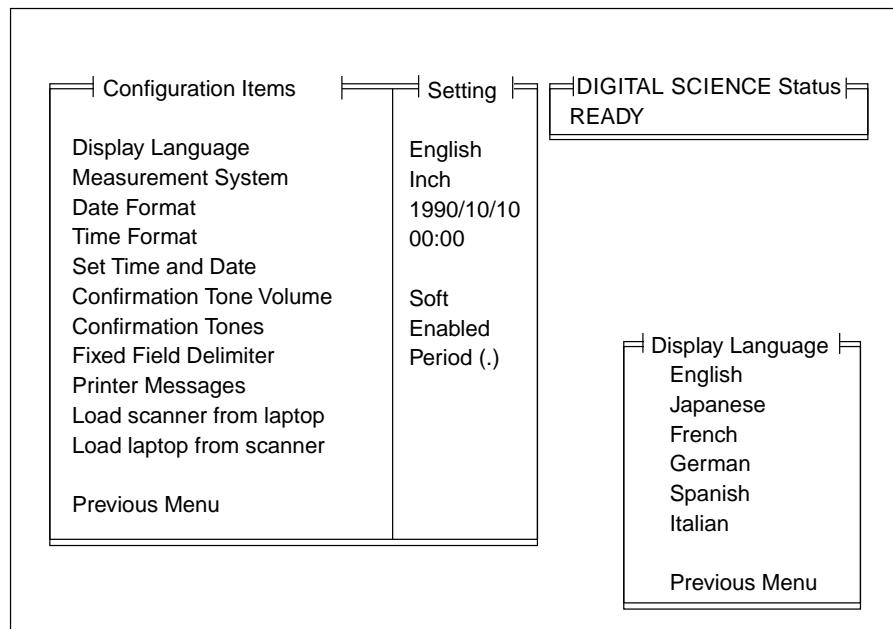

Display language defines the primary display language.

The default is *English*.

The options are: *English* or *Japanese* (displayed in Katakana characters).

- Select *Display Language* from the Configuration Items window.

NOTE: Other languages may appear in the Display Language box; however, only English and Japanese are supported.

- Select the desired language option.

NOTE: The display language may also be altered using Function Code F19—Display Language.

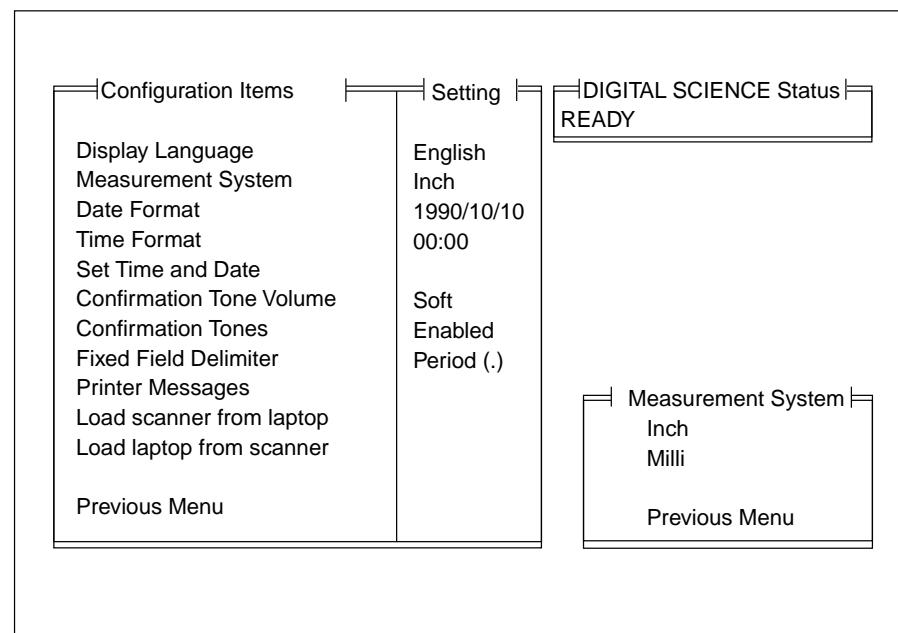

Measurement system

Measurement system defines the primary measurement system.

The default is *Inch*.

The options are:

- *Inch*—uses inches as the primary unit of measure.
 - *Milli*—uses millimetres as the primary unit of measure.
- Select *Measurement System* from the Configuration Items window.

- Select the desired unit of measurement.

NOTE: The measurement system may also be altered using Function Code F20—Measurement System.

Date format

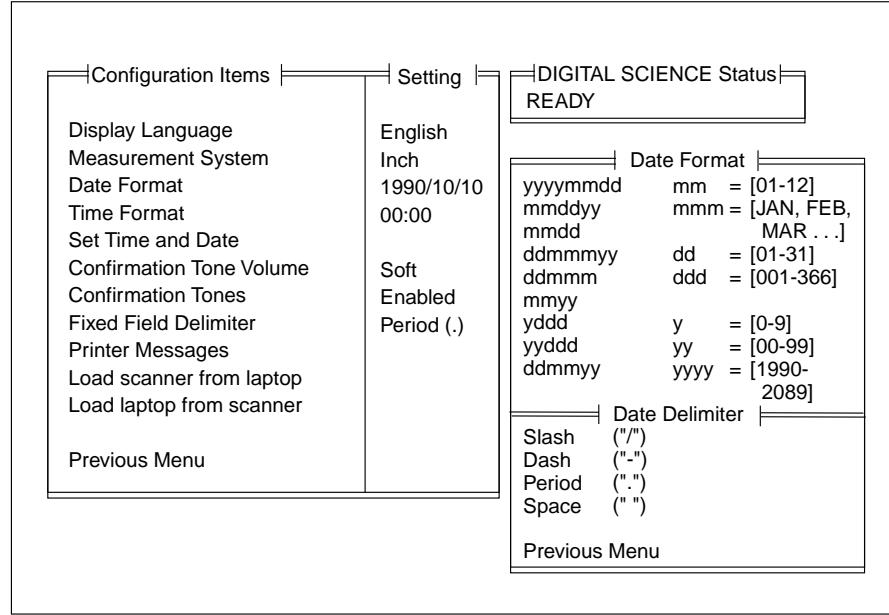

Date format defines the date display format; both the date format and delimiter.

The default format is *mmddyy*.

The default delimiter is a slash (/).

Refer to *Description 1: Date Format Samples* for a description of the available options.

- Select *Date Format* from the Configuration Items window.

- Select the desired date format.
- Select the desired date delimiter.

Description 1: Date Format Samples

Sample Date March 1, 1994	Slash	Dash	Period	Space
mmddyy	03/01/94	03-01-94	03.01.94	03 01 94
mmdd	03/01	03-01	03.01	03 01
ddmmmyy	01/MAR/94	01-MAR-94	01.MAR.94	01 MAR 94
ddmmm	01/MAR	01-MAR	01.MAR	01 MAR
mmyy	03/94	03-94	03.94	03 94
yyddd	94/060	94-060	94.060	94 060
ddmmyy	01/03/94	01-03-94	01.03.94	01 03 94
yddd	4/060	4-060	4.060	4 060
yyyymmdd	1994/03/01	1994-03-01	1994.03.01	1994 03 01

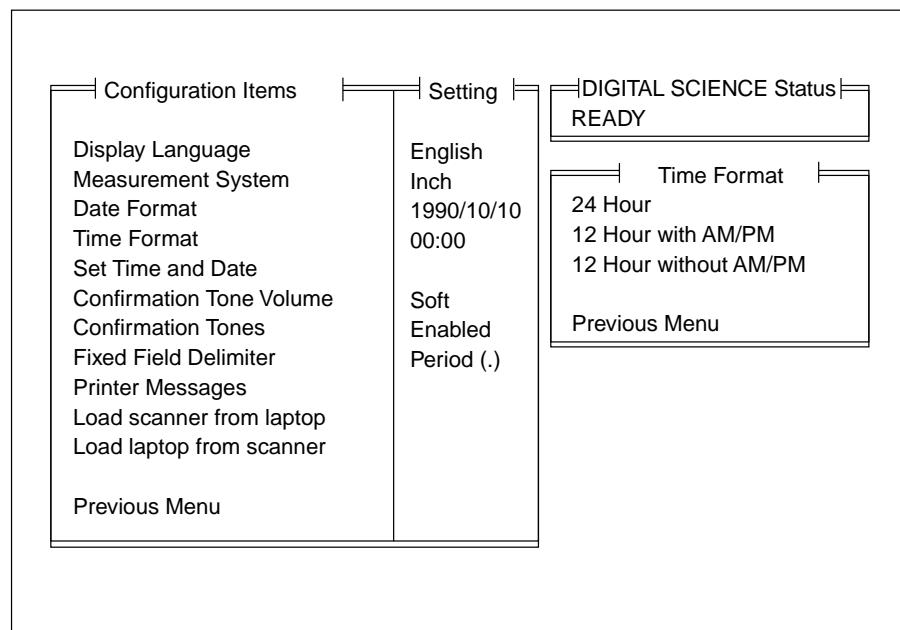

Time format

Time format defines the time display format.

The default is *12 hour with AM/PM*.

Refer to *Description 2: Time Format Samples* for a description of the available options.

- Select *Time Format* from the Configuration Items window.

- Select the desired time format.

Description 2: Time Format Samples

Time Format	What Is Printed
24 hour	17:00
12 hour with AM/PM	5:00 PM
12 hour without AM/PM	5:00

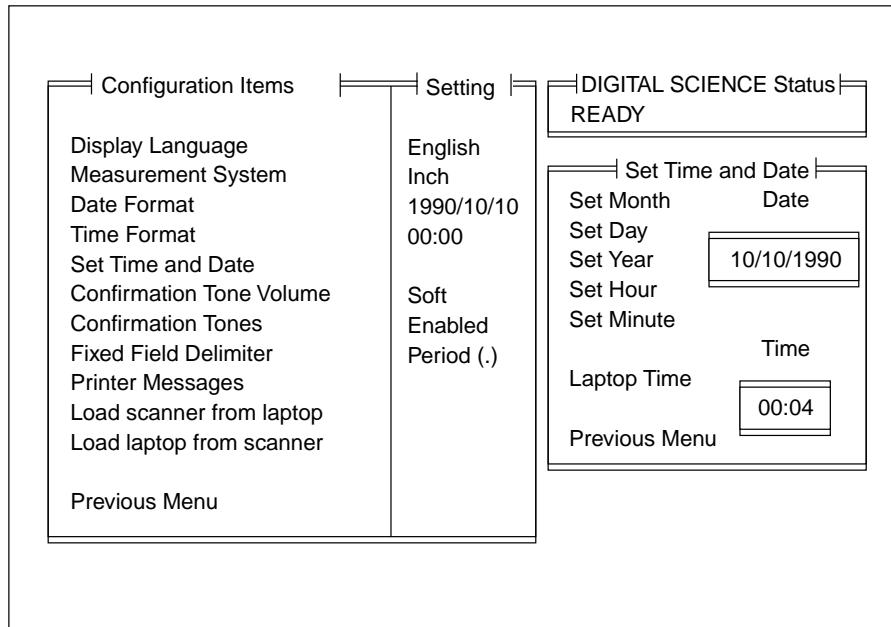

Set time and date

Set time and date sets the system clock.

The default time is *00:00*; the default date is *10/10/90*.

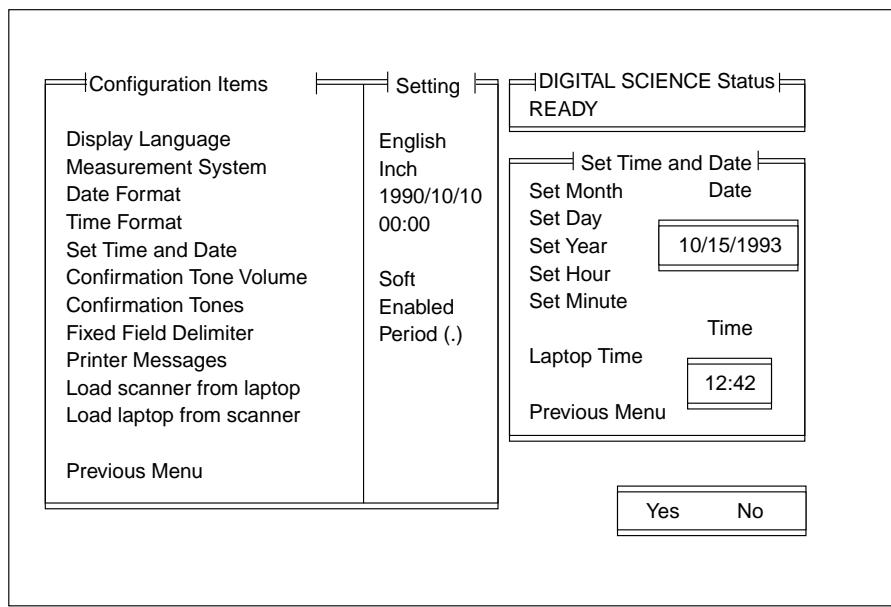

The options are:

- to set each individual time and date field separately.
 - transfer the internal time and date settings of the computer used during configuration to set the system clock.
- Select *Set Time and Date* from the Configuration Items window and press Enter.

To transfer the internal time and date settings of the computer used during configuration:

- Select *Laptop Time*. You will be asked to confirm the transfer of the time and date information.

- Select *Yes* to initiate the transfer of the time and date information; or select *No* to cancel the transfer of the time and date information.

To set the internal time and date settings:

- Select a single field (*month*, *day*, *year*, *hour*, or *minute*) and press *Enter*.

The sample window assumes that the *month* field was selected.

The screenshot shows a software interface with a main menu on the left and a status window on the right. The main menu includes options like Configuration Items, Display Language, Measurement System, Date Format, Time Format, Set Time and Date, Confirmation Tone Volume, Confirmation Tones, Fixed Field Delimiter, Printer Messages, Load scanner from laptop, Load laptop from scanner, and Previous Menu. The status window displays 'DIGITAL SCIENCE Status READY'. It also shows 'Set Time and Date' with 'Set Month' set to 'Date' and 'Set Year' set to '10/10/1990'. Below this, there's a 'Time' section with 'Laptop Time' set to '00:04'. At the bottom of the status window, there's a text input field with the placeholder 'Enter new month below' containing the value '10'. Instructions at the bottom right of the status window say 'To Change: Enter Value' and 'To Retain: Press ENTER'.

To change the value of the time/date field selected:

- Enter the desired value and press *Enter*.

Valid input for each field is provided below:

Field	Valid settings
Month	1 – 12, representing January through December
Day	1 – 31, representing the day of the month
Year	1990 – 2089
Hour	0 – 23, representing 12:00 AM through 11:00 PM
Minute	0 – 59

NOTE: The valid settings should not vary, regardless of the time and date formats defined using the configuration items specified in the *Date Format* and *Time Format* sections. The settings entered here will, however, be displayed in the formats defined using configuration items specified in the *Date Format* and *Time Format* sections.

To leave the value of the time/date field selected unchanged:

- Press *Enter*.

Repeat this step for each of the time/date fields to be set.

NOTE: The time may also be altered using Function Code F21—Set Time; and the date may also be altered using Function Code F22—Set Date. Both the time and the date may be displayed (but not altered) using Function Code F23—View Date and Time.

Confirmation tone volume

Confirmation tone volume defines the volume of the confirmation tones (for footswitch, patch reader and bar code reader).

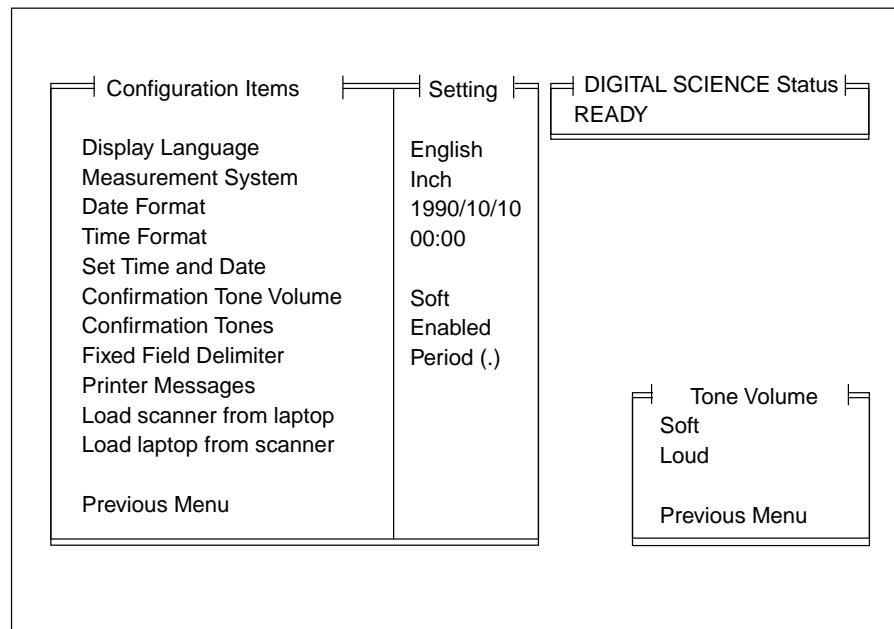

The default is *Soft*.

The options are:

— *Soft*

— *Loud*

- Select *Confirmation Tone Volume* from the Configuration Items window.

- Select the desired confirmation tone volume.

Confirmation tones

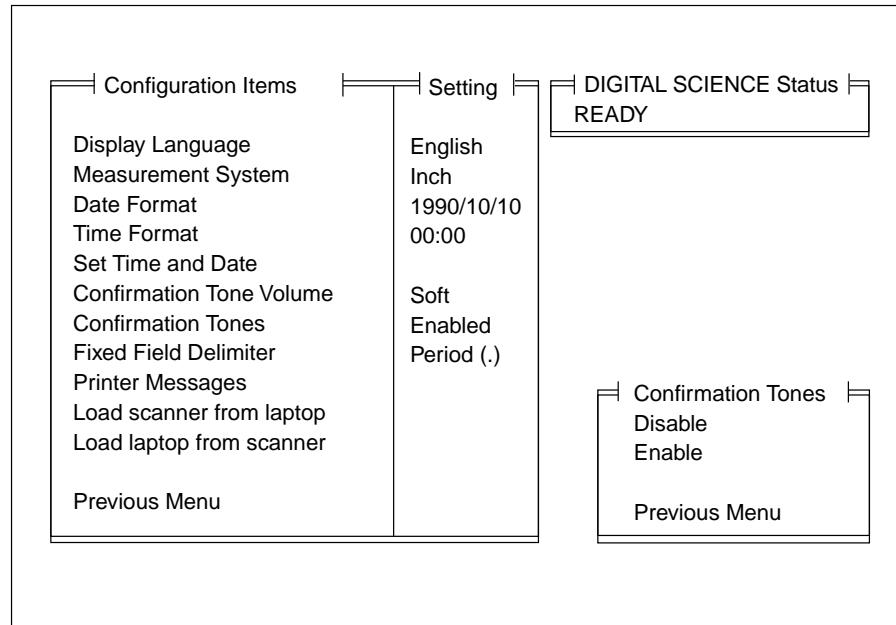

Confirmation tones enables or disables all confirmation tones (for footswitch, patch reader and bar code reader).

The default is *Enable*.

The options are:

- Enable*—indicates that confirmation tones may be used.
- Disable*—indicates that confirmation tones may not be used.

- Select *Confirmation Tones* from the Configuration Items window.

- Select *Disable* or *Enable*.

NOTE: If you select *Disable*, all confirmation tones are permanently disabled. If you select *Enable*, any confirmation tone (footswitch, patch reader, or document scanning array/bar code reader) must also be enabled at the mode level using the appropriate Mode Configuration item.

Fixed field delimiter

Fixed field delimiter defines the fixed field delimiter used in the image address display.

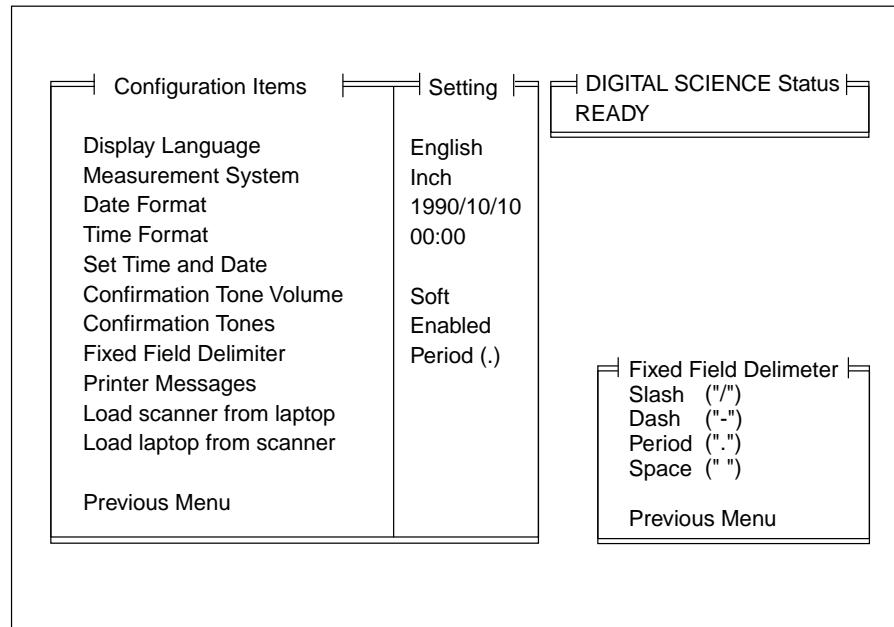

The default is *Period (.)*.

The options are:

- *Slash (/)*
- *Dash (-)*
- *Period (.)*
- *Space ()*

Refer to *Description 3: Fixed Field Delimiter Samples* for a description of the available options.

- Select *Fixed Field Delimiter* from the Configuration Items window.

- Select the desired Fixed Field delimiter.

Description 3: Fixed Field Delimiter Samples

Delimiter	What Is Displayed
Slash (/)	FFF/CC.BB.AAA
Dash (-)	FFF-CC.BB.AAA
Period (.)	FFF.CC.BB.AAA
Space ()	FFF CC.BB.AAA

Printer messages

Printer messages define the messages which may be printed by the front document printer and/or rear document printer. The messages defined here may be printed by including the desired message number in the document printer print definitions using Mode Configuration items specified in the *Front Document Printer Print Definitions* and/or *Rear Document Printer Print Definitions* sections. The default is blank messages.

The message text may have up to 38 characters. The message may contain upper- or lowercase alphanumerics and/or any other ASCII character which appears on a standard keyboard. For information regarding input of nonstandard (non-ASCII) characters, refer to *Appendix B, Language support*.

If a message already exists, the current contents of the message selected will appear in a line below the Print Messages Definition area. The input cursor will be positioned at the beginning of the message in this line.

To enter a new message:

- Select *Printer Messages* from the Configuration Items window.
- Enter your message on the next available Printer Messages line.

Msg. No.	Definition
1	Printer Messages
2	
3	
4	
5	
6	
7	
8	
9	

Prev

To change the text of an exiting message:

- Select the desired message number.
- Enter the text of the new message.
- Press *Enter* when finished.

You will be asked to confirm the replacement of the current contents of the message with the new message input: **Replace Msg?**

- Select *Yes* to confirm replacement of the old message with the next message text in the Print Message Definition area.
- Select *No* to cancel the replacement of the old message with the new message.

Version numbers

Display the current scanner firmware versions.

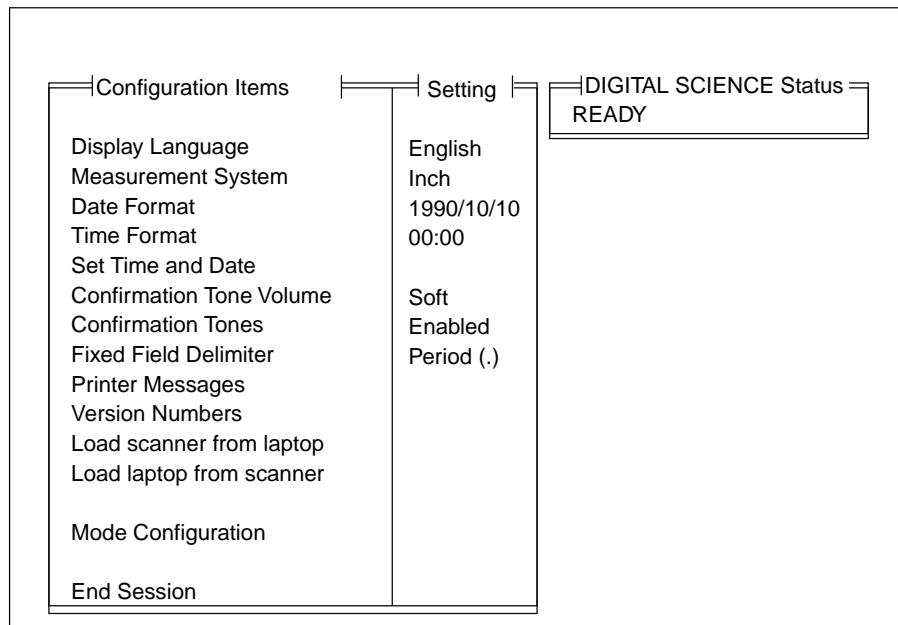

- Select *Version Numbers* from the Configuration Items Window.

Configuration Items	Setting	DIGITAL SCIENCE Status

Strike any key		

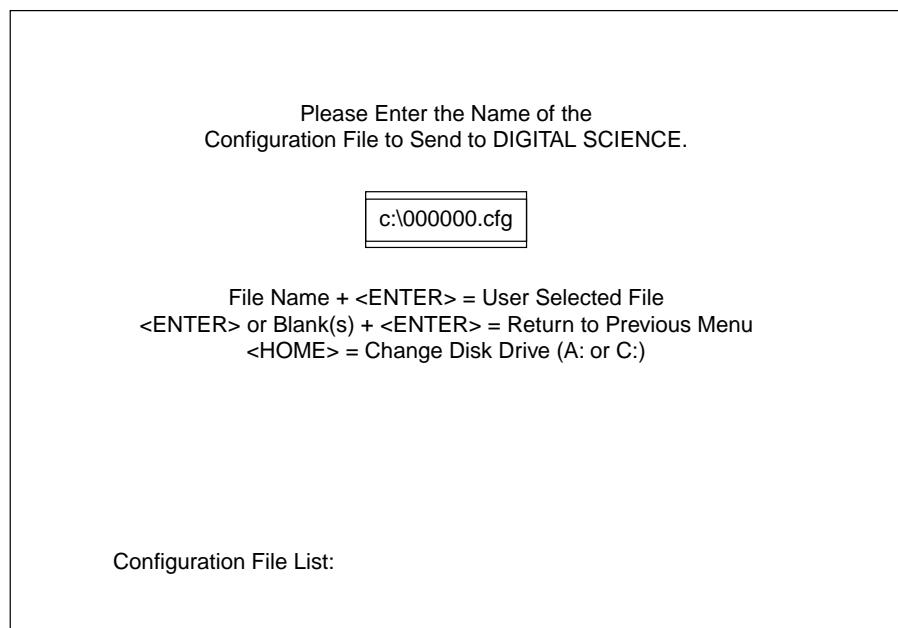

Load scanner from laptop

Used to upload a configuration file from diskette to the Scanner 5500/7500.

- Select *Load Scanner from Laptop* from the Configuration Items window.

The following window will appear:

- Enter the filename to upload and press *Enter*.

Load laptop from scanner

Used to download a configuration file from the Scanner 5500/7500 onto diskette. This is useful in creating configuration files which may be transported to other *Digital Science* Scanners. This is also used to create backup files. This option should be performed any time an installation or setup change is completed.

- Select *Load Laptop from Scanner* from the Configuration Items window.

Configuration Items	Setting	DIGITAL SCIENCE Status
Display Language	English	
Measurement System	Inch	
Date Format	1990/10/10	
Time Format	00:00

The following window will appear:

Please Enter the Name of the Configuration File to Send to Laptop.

c:\000000.cfg

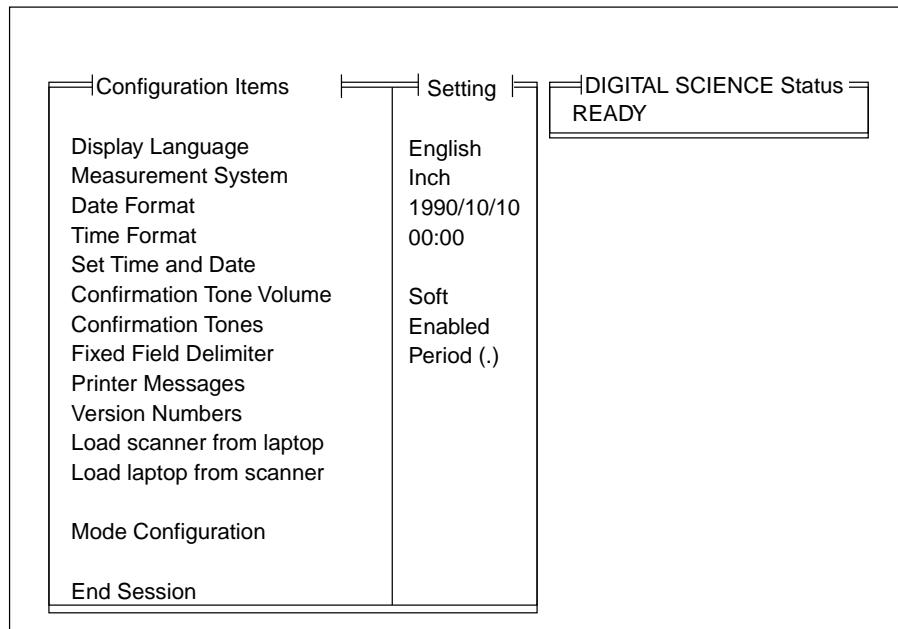

File Name + <ENTER> = User Selected File
<ENTER> or Blank(s) + <ENTER> = Return to Previous Menu
<HOME> = Change Disk Drive (A: or C:)

- Enter a filename (up to 8 characters long—no special characters allowed, with a file extension of *cfg*).
- Press *Enter*.

3 Mode configuration

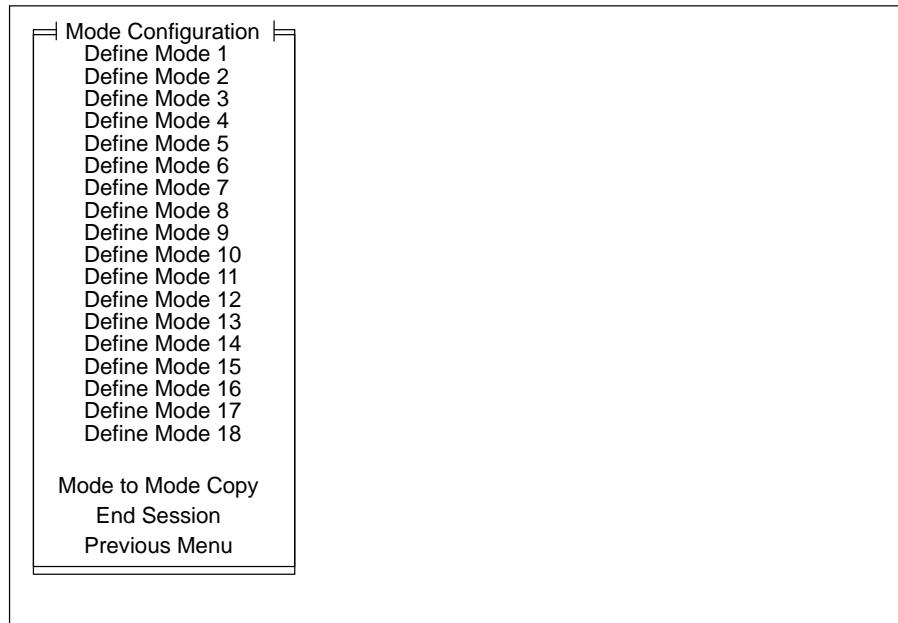

Accessing the Mode Configuration Menu

The following section describes how to access the Mode Configuration menu, how to copy mode definitions from one mode to another, how to select a mode for definition, and how to select each item for definition.

- Select *Mode Configuration*.

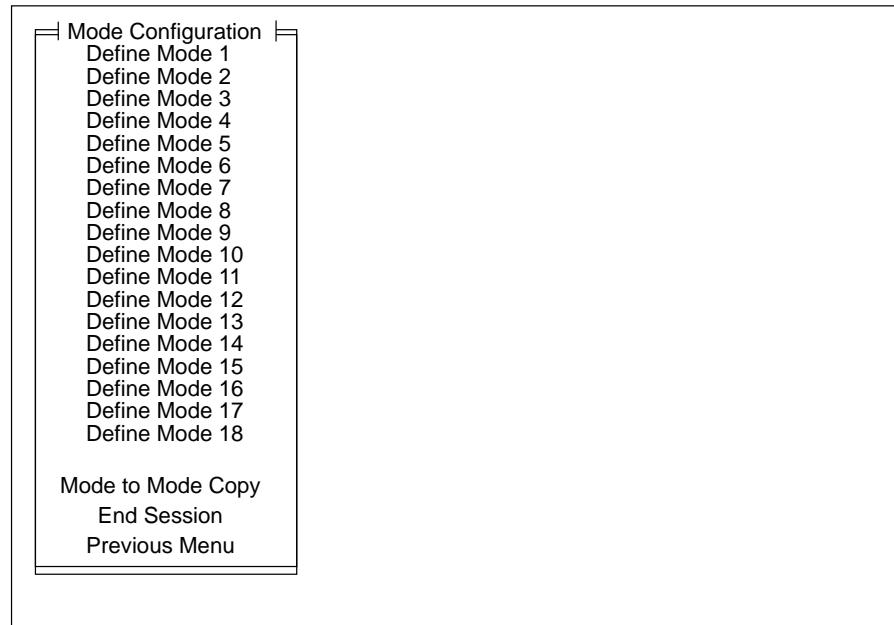

The Mode Configuration window will appear:

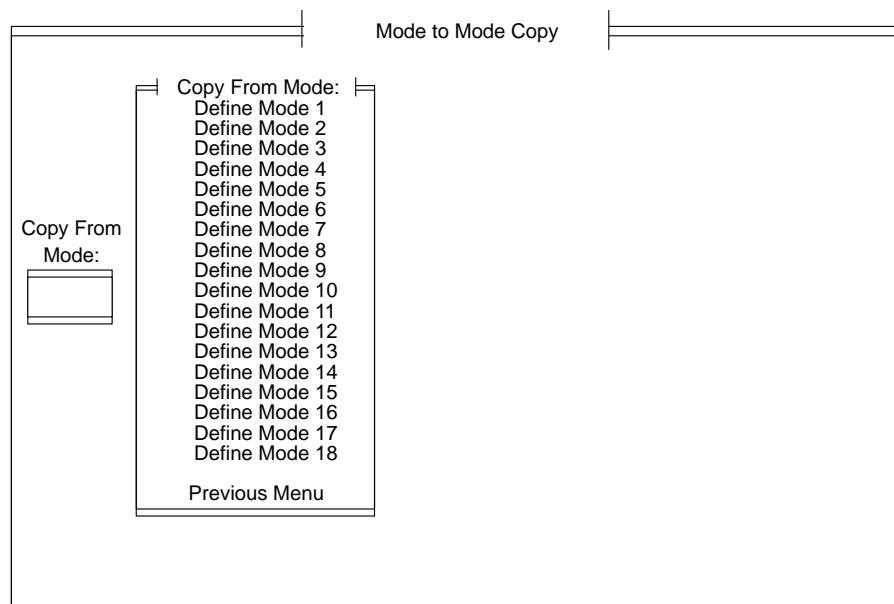

Mode-to-mode copying

A number of modes might have similar definitions. The mode to mode copy feature allows you to fully define one mode and then copy that mode definition to another mode, saving the time and effort required to fully define each mode.

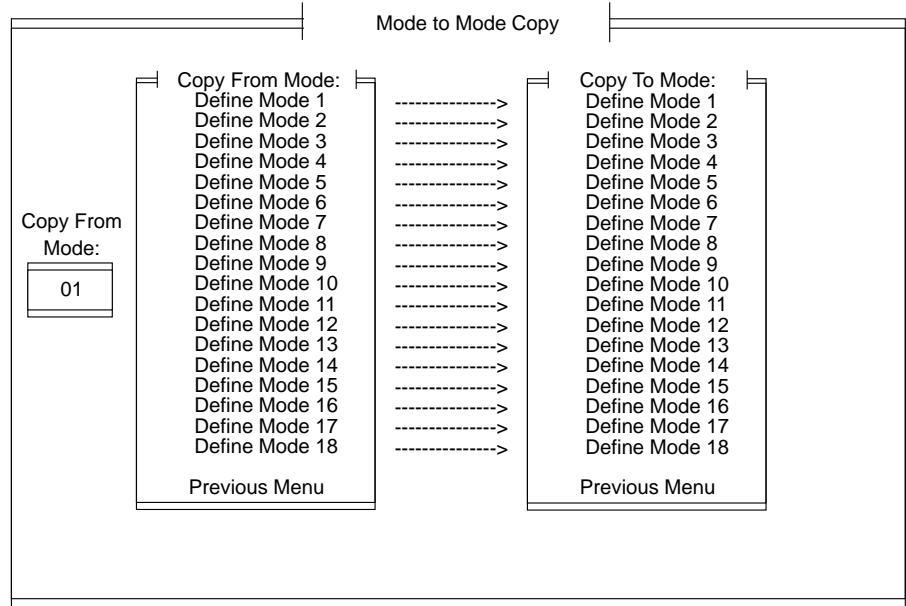

Perform the following steps to copy the definitions of one mode to another mode:

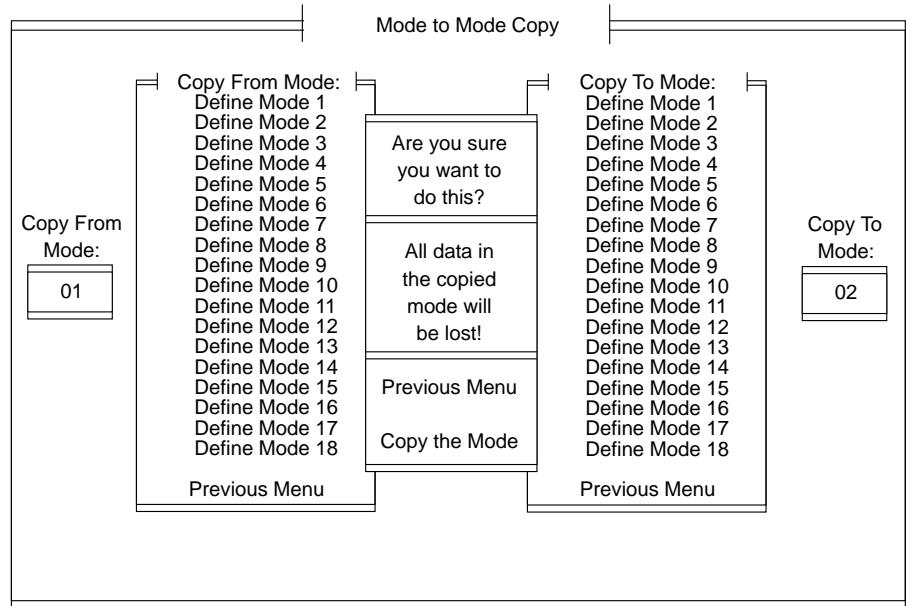

- Select *Mode to Mode Copy* from the first Mode Configuration window.

- Select a mode which contains the definitions you wish to copy to another mode from the *Copy From Mode* list.

- Select the mode into which you wish to copy the previously selected mode definitions from the *Copy To Mode* list.

To copy the contents of the *Copy From Mode* to the *Copy To Mode*:

- Select the *Copy the Mode* option.
- Press *Enter*.

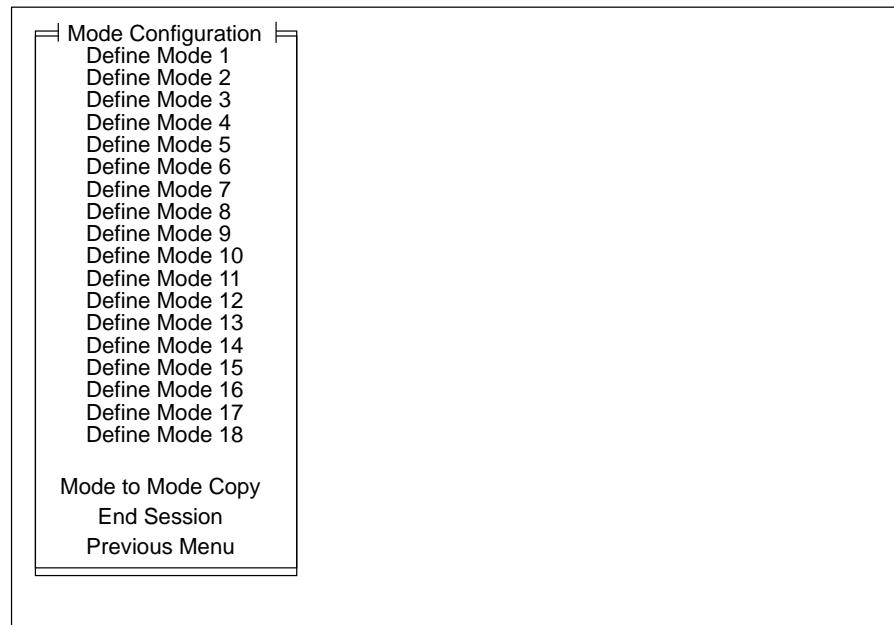

To cancel the *Mode to Mode Copy*:

- Select *Previous Menu*. You will be returned to the Mode Configuration window.

Selecting a mode for configuration

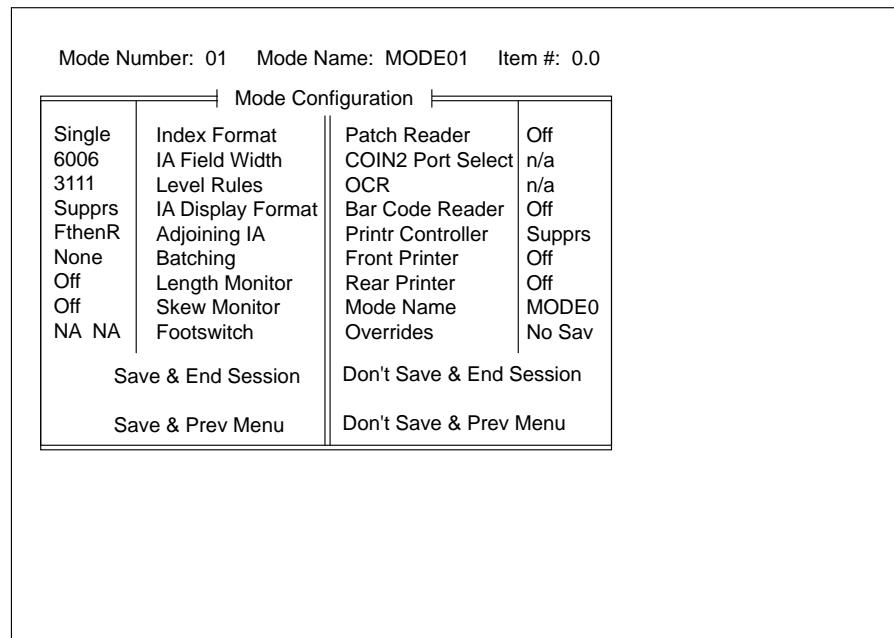

Perform the following steps to select a mode for configuration.

NOTE: Not all items available for definition need to be defined. If you wish to allow an item to default or have performed a Mode to Mode copy after fully defining the Copy From Mode, there is no need to define each item.

- Select *Define Mode x*, where x is the number of the mode you wish to configure.

The Mode Configuration window will appear:

Mode configuration items may be selected from this window. A detailed description of each item is provided in this section.

Index format

Index format defines the index format used by the application mode selected.

Refer to *Description 1: Index Formats* for a description of the index formats.

The default is mode dependent; the following list provides the defaults for each mode:

Mode	Index Format
Mode 1	Single Level
Mode 2	Two Level Offset
Mode 3	Two Level
Mode 4	Three Level Offset
Mode 5	Three Level
Mode 6	Two Level
Mode 7	Two Level Offset
Mode 8 through Mode 18	Three Level

The options are:

- *Single Level*
- *Two Level*
- *Two Level Offset*
- *Three Level*
- *Three Level Offset*.

- Select *Index Format* from the Mode Configuration window.

(Level 3)

Whenever a document is assigned Level 3, the image address field associated with Level 3 (Field C) is incremented and the field associated with Level 2 (Field B) is set to zero.

Whenever a document is assigned Level 2, the image address field associated with Level 3 (Field C) is unchanged, and the field associated with Level 2 (Field B) is incremented.

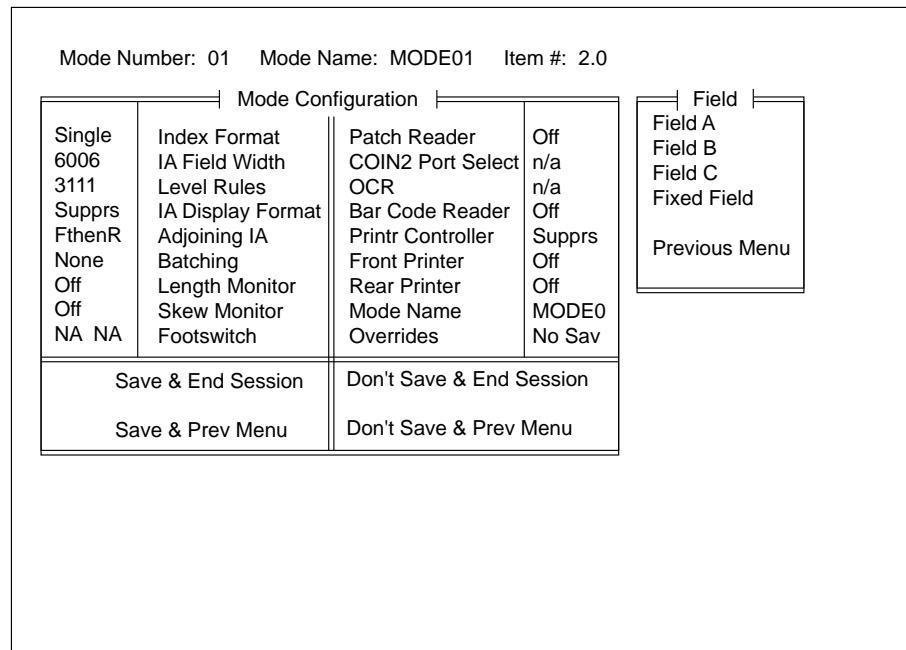

Whenever a document is assigned Level 1, the image address is unchanged.

IA Field width

IA Field width defines the image address (IA) field widths.

Refer to *Description 2: Image Address Fields* for a description of proper field definitions.

- Select *IA Field Width* from the Mode Configuration window.

The following pages provide instructions on how to define the image address field widths. When the field width definitions are complete, you will automatically be returned to this window.

To close the *Field* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

Field A (Level 1)

Field A represents Level 1. Its value is incremented when a small image mark is placed next to a document and/or a document is assigned Level 1.

- Select *Field A*.

Refer to *Description 3: Image Address Field Width Defaults* for a complete listing of the default values for each mode.

Description 2: Image Address Fields

An image address is a unique identifier assigned to each individual document by the Scanner 5500 or 7500.

An image address may contain up to 15 characters; consisting of a maximum of 12 digits and a maximum of 3 delimiters.

Four fields must be defined:

- Field A represents Level 1. Its value is incremented when a small image mark is placed next to a document and/or a document is assigned Level 1.
- Field B represents Level 2. Its value is incremented when a medium image mark is placed next to a document and/or a document is assigned Level 2.
- Field C represents Level 3. Its value is incremented when a large image mark is placed next to a document and/or a document is assigned Level 3.
- Fixed Field contains fixed information; typically, the date.

Example:

0 3 0 1 . 0 2 . 0 0 1 . 0 0 0

where:
Field A contains 000
Field B contains 001
Field C contains 02
Fixed Field contains 0301

The image address field lengths are dependent upon the index format chosen earlier:

- Single Level (Example: FFF.AAA)
Field A is defined as having a field length greater than zero (1–9).
Field B is defined as having a field length of zero (0).
Field C is defined as having a field length of zero (0).
Fixed Field may be defined, if desired (0–9).
- Two Level (Example: FFF.BBB.AAA)
Field A is defined as having a field length greater than zero (1–9).
Field B is defined as having a field length greater than zero (1–9).
Field C is defined as having a field length of zero (0).
Fixed Field may be defined, if desired (0–9).
- Two Level Offset (Example: FFF.BBB)
Field A is defined as having a field length of zero (0).
Field B is defined as having a field length greater than zero (1–9).
Field C is defined as having a field length of zero (0).
Fixed Field may be defined, if desired (0–9).
- Three Level (Example: FFF.CCC.BBB.AAA)
Field A is defined as having a field length greater than zero (1–9).
Field B is defined as having a field length greater than zero (1–9).
Field C is defined as having a field length greater than zero (1–9).
Fixed Field may be defined, if desired (0–9).
- Three Level Offset (Example: FFF.CCC.BBB)
Field A is defined as having a field length of zero (0).
Field B is defined as having a field length greater than zero (1–9).
Field C is defined as having a field length greater than zero (1–9).
Fixed Field may be defined, if desired (0–9).

Description 3: Image Address Field Width Defaults
--

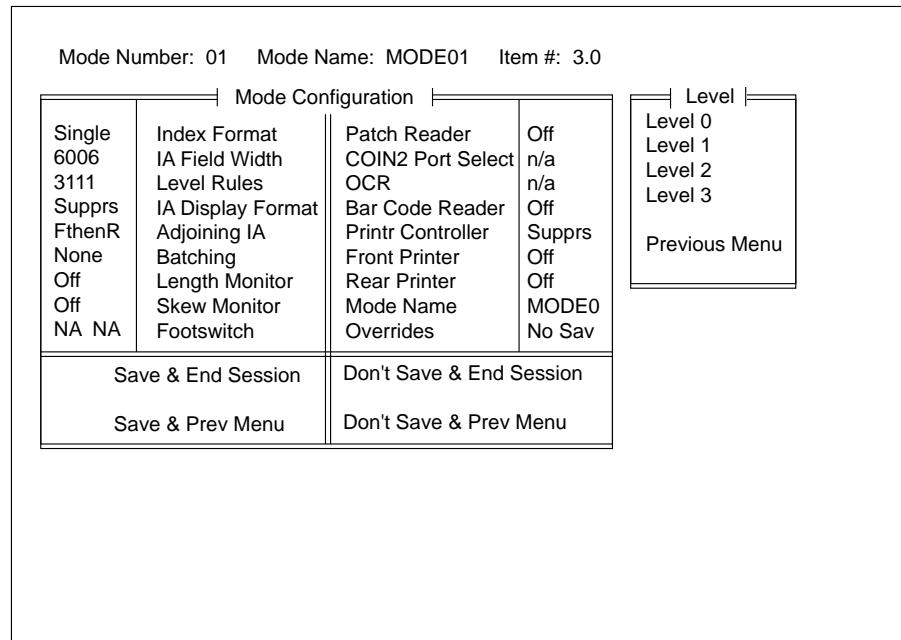

The default field widths for each mode are provided below:

	Fixed Field	Field C Level 3	Field B Level 2	Field A Level 1	Example
Mode 1	6	0	0	6	FFFFFF.AAAAAAA
Mode 2	6	0	6	0	FFFFFF.BBBBBBB
Mode 3	6	0	3	3	FFFFFF.BBB.AAA
Mode 4	6	3	3	0	FFFFFF.CCC.BBB
Mode 5	4	2	3	3	FFFF.CC.BBB.AAA
Mode 6	6	0	4	2	FFFFFF.BBBB.AA
Mode 7	6	0	6	0	FFFFFF.BBBBBBB
Mode 8	4	2	3	3	FFF.CC.BBB.AAA
Mode 9	4	2	3	3	FFF.CC.BBB.AAA
Mode 10	4	2	3	3	FFF.CC.BBB.AAA
Mode 11	4	2	3	3	FFF.CC.BBB.AAA
Mode 12	4	2	3	3	FFF.CC.BBB.AAA
Mode 13	4	2	3	3	FFF.CC.BBB.AAA
Mode 14	4	2	3	3	FFF.CC.BBB.AAA
Mode 15	4	2	3	3	FFF.CC.BBB.AAA
Mode 16	4	2	3	3	FFF.CC.BBB.AAA
Mode 17	4	2	3	3	FFF.CC.BBB.AAA
Mode 18	4	2	3	3	FFF.CC.BBB.AAA

Level rules

Level rules define the level of a document based upon the level of the previous document. These definitions are used as defaults when the document level is not determined by another method (i.e., footswitch, level key, etc).

- Select *Level Rules* from the Mode Configuration window.

The following pages provide instructions on how to define the level rules, based upon the definition made using the **Index Format** option. When the level rule definitions are complete, you will automatically be returned to this window.

To close the *Level* menu:

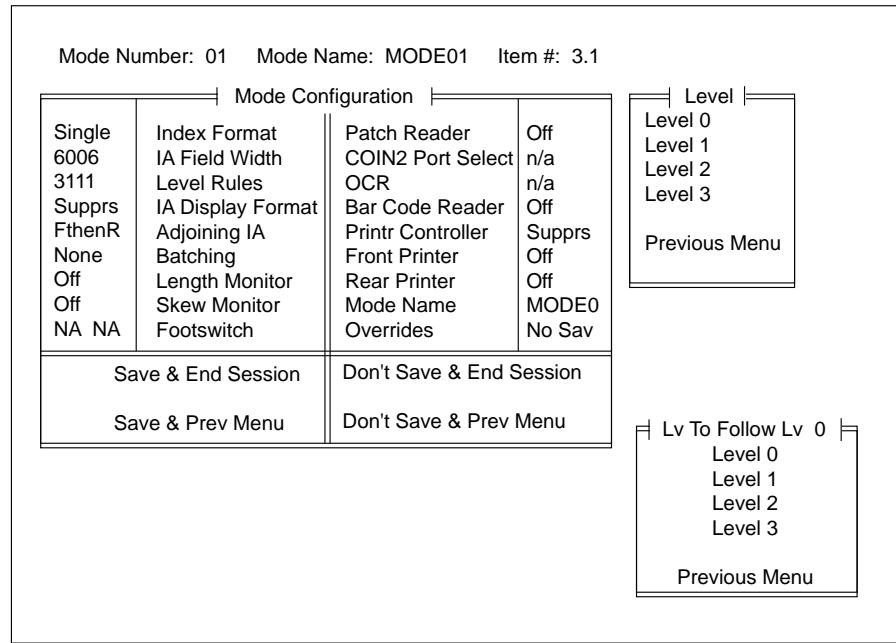

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

Level to follow level 0

NOTE: This menu option is a valid selection when using any of the available index formats defined using the **Index Format** option.

- Select *Level 0*.

Refer to *Description 4: Level Rule Options and Defaults* for a complete listing of the valid selections and default values for each mode.

- Select the desired document level from the *Lv To Follow Lv 0* menu.
- Press *Enter*.
 - If the document level selected is valid, the *Lv To Follow Lv 0* menu will close and another level may be chosen from the *Level* menu.
 - If the document level selected is *not* valid, based upon the Index Format already selected, an error message, such as; **Bad Level (Level 2) for a Single-Level system. Press <ENTER> key will appear.**

To clear the message:

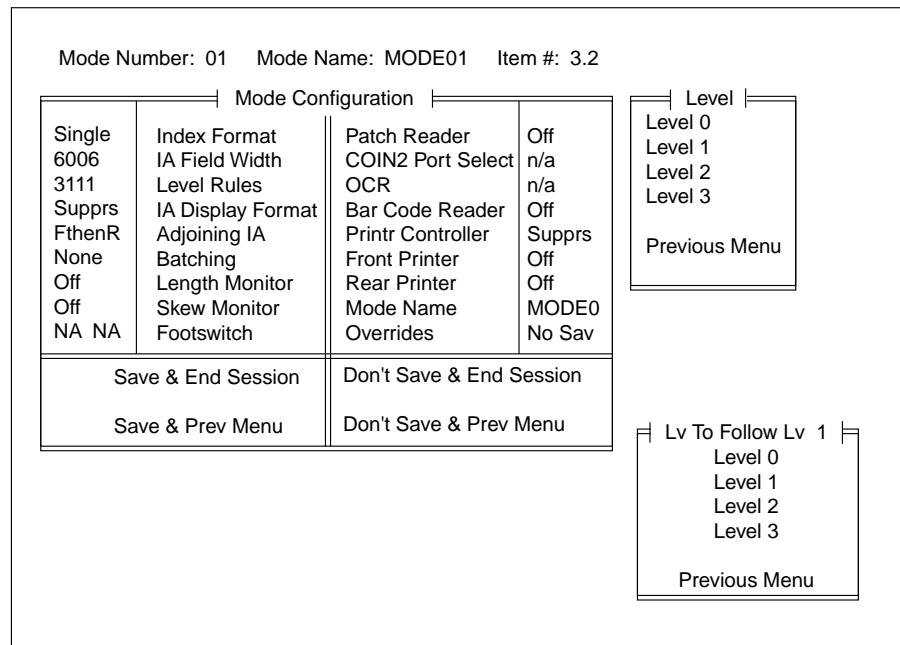

- Press *Enter* and select a valid document level.

Level to follow level 1

NOTE: This menu option is a valid selection when using any of the available index formats defined using the **Index Format** option.

- Select *Level 1*.

Refer to *Description 4: Level Rule Options and Defaults* for a complete listing of the valid selections and default values for each mode.

- Select the desired document level from the *Lv To Follow Lv 1* menu.
- Press *Enter*.
 - If the document level selected is valid, the *Lv To Follow Lv 1* menu will close and another level may be chosen from the *Level* menu.
 - If the document level selected is *not* valid, based upon the Index Format already selected, an error message, such as; ***Bad Level (Level 2) for a Single-Level system. Press <ENTER> key*** will appear.

To clear the message:

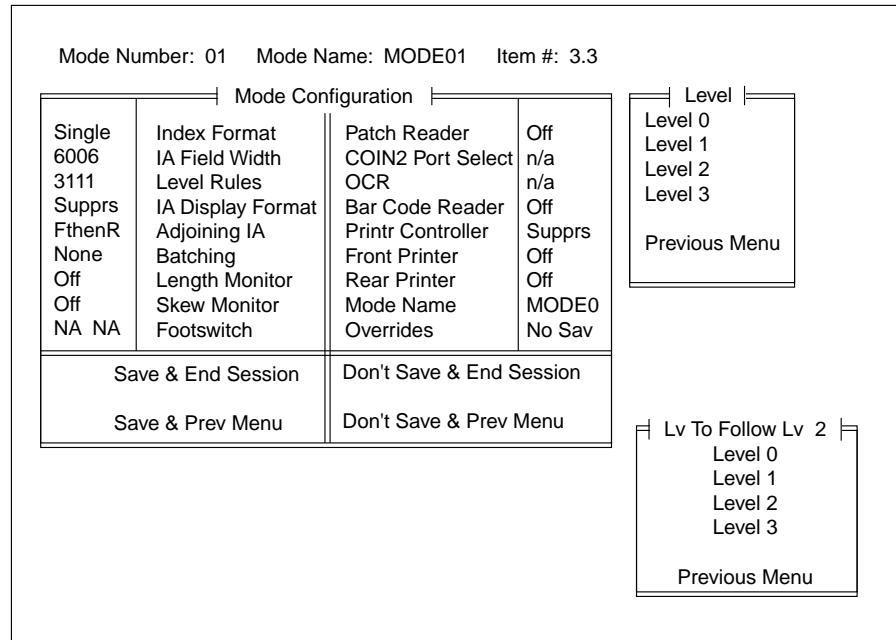

- Press *Enter* and select a valid document level.

Level to follow level 2

NOTE: This menu option is a valid selection only when using any of the two-level (two level or two level offset) or three-level (three level or three level offset) index formats defined using the **Index Format** option.

- Select *Level 2*.

Refer to *Description 4: Level Rule Options and Defaults* for a complete listing of the valid selections and default values for each mode.

- Select the desired document level from the *Lv To Follow Lv 2* menu.
- Press *Enter*.
 - If the document level selected is valid, the *Lv To Follow Lv 2* menu will close and another level may be chosen from the *Level* menu.
 - If the document level selected is *not* valid, based upon the Index Format already selected, an error message, such as; **Bad Level (Level 3) for a Single-Level system. Press <ENTER> key** will appear.

To clear the message:

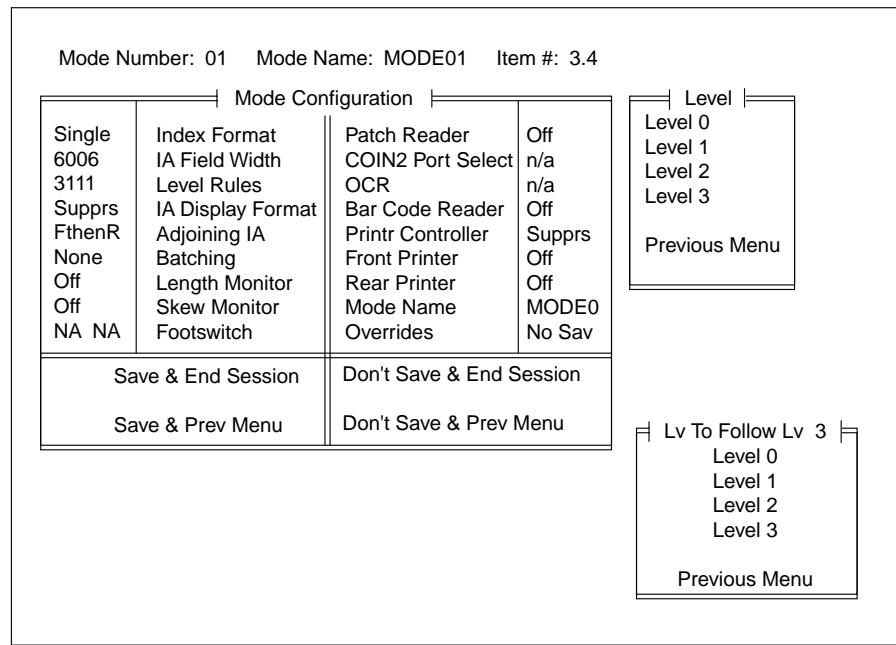

- Press *Enter* and select a valid document level.

Level to follow level 3

NOTE: This menu option is a valid selection only when using any of the three-level (three level or three level offset) index formats defined using the **Index Format** option.

- Select *Level 3*.

Refer to *Description 4: Level Rule Options and Defaults* for a complete listing of the valid selections and default values for each mode.

- Select the desired document level from the *Lv To Follow Lv 3* menu.
- Press *Enter*.
 - If the document level selected is valid, the *Lv To Follow Lv 3* menu will close and another level may be chosen from the *Level* menu.
 - If the document level selected is *not* valid, based upon the Index Format already selected, an error message, such as; **Bad Level (Level 2) for a Single-Level system. Press <ENTER> key** will appear.

To clear the message:

- Press *Enter* and select a valid document level.

Description 4: Level Rule Options and Defaults

The default level rules for each mode are provided below:

	Level 0 is followed by	Level 1 is followed by	Level 2 is followed by	Level 3 is followed by
Mode 1	Level 1	Level 1	Level 1	Level 3
Mode 2	Level 2	Level 1	Level 2	Level 3
Mode 3	Level 2	Level 1	Level 2	Level 3
Mode 4	Level 3	Level 1	Level 2	Level 2
Mode 5	Level 2	Level 1	Level 2	Level 2
Mode 6	Level 2	Level 2	Level 2	Level 3
Mode 7	Level 2	Level 2	Level 2	Level 3
Mode 8	Level 2	Level 1	Level 1	Level 2
Mode 9	Level 2	Level 1	Level 1	Level 2
Mode 10	Level 2	Level 1	Level 1	Level 2
Mode 11	Level 2	Level 1	Level 1	Level 2
Mode 12	Level 2	Level 1	Level 1	Level 2
Mode 13	Level 2	Level 1	Level 1	Level 2
Mode 14	Level 2	Level 1	Level 1	Level 2
Mode 15	Level 2	Level 1	Level 1	Level 2
Mode 16	Level 2	Level 1	Level 1	Level 2
Mode 17	Level 2	Level 1	Level 1	Level 2
Mode 18	Level 2	Level 1	Level 1	Level 2

Description 4: Level Rule Options and Defaults (continued)

The valid level rule options for each index format are provided below:

	Level 0 may be followed by	Level 1 may be followed by	Level 2 may be followed by	Level 3 may be followed by
Single Level	Level 0 Level 1	Level 0 Level 1	n/a	n/a
Two Level	Level 0 Level 1 Level 2	Level 0 Level 1 Level 2	Level 0 Level 1 Level 2	n/a
Two Level Offset	Level 0 Level 1 Level 2	Level 0 Level 1 Level 2	Level 0 Level 1 Level 2	n/a
Three Level	Level 0 Level 1 Level 2 Level 3			
Three Level Offset	Level 0 Level 1 Level 2 Level 3			

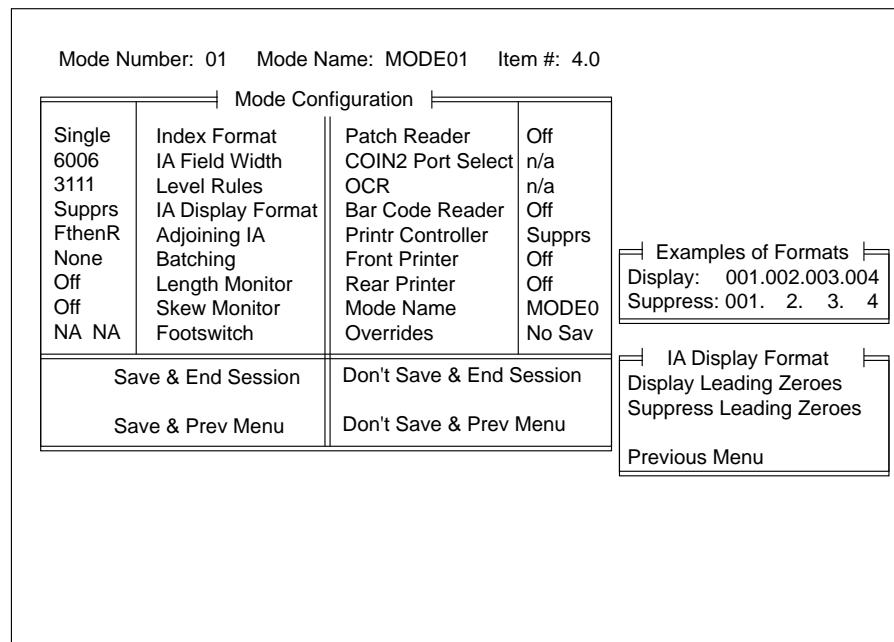

IA Display format

Defines the format of the image address display which appears on the control panel.

The default for all modes is *Suppress Leading Zeroes*.

The options are:

- *Display Leading Zeroes* (i.e., 001.002.003.004)
- *Suppress Leading Zeroes* (i.e., 001. 2. 3. 4)
- Select *IA Display Format* from the Mode Configuration window.

- Select the desired image address display format.
- Press *Enter*.

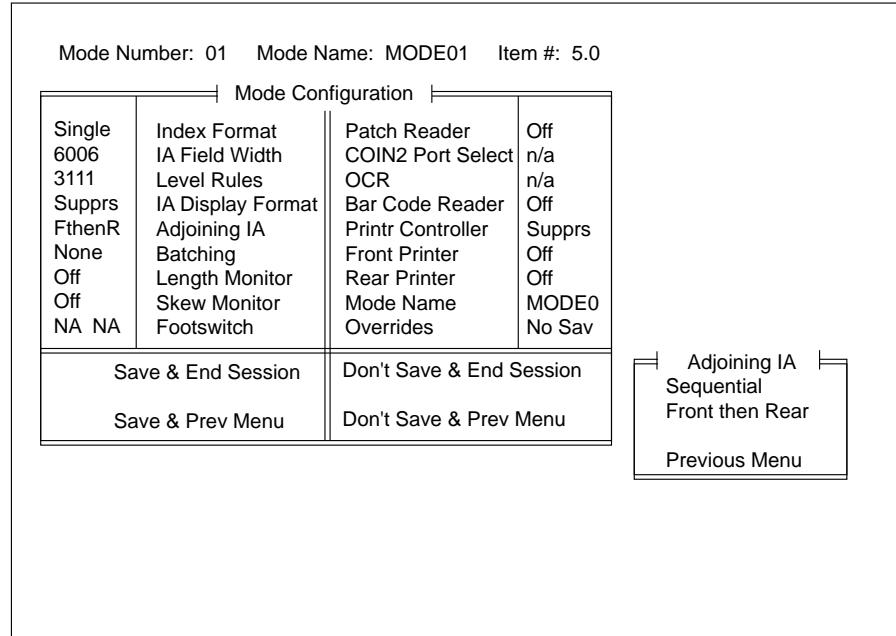

Adjoining IA

Defines the image address assigned to the rear side image of a document scanned in duplex mode.

The default for all modes is *Front then Rear*.

The options are:

- *Sequential*—indicates that the rear side image of a document scanned in duplex mode will be assigned a unique image address—incremented from the image address assigned to the front side image.
- *Front then Rear*—indicates that the rear side image of a document scanned in duplex mode will be assigned the same image address that the front side image was assigned.
- Select *Adjoining IA* from the Mode Configuration window.

- Select the desired adjoining image address assignment scheme.
- Press *Enter*.

Batching

Batching defines the number of documents of a specified level to process prior to performing a predefined action.

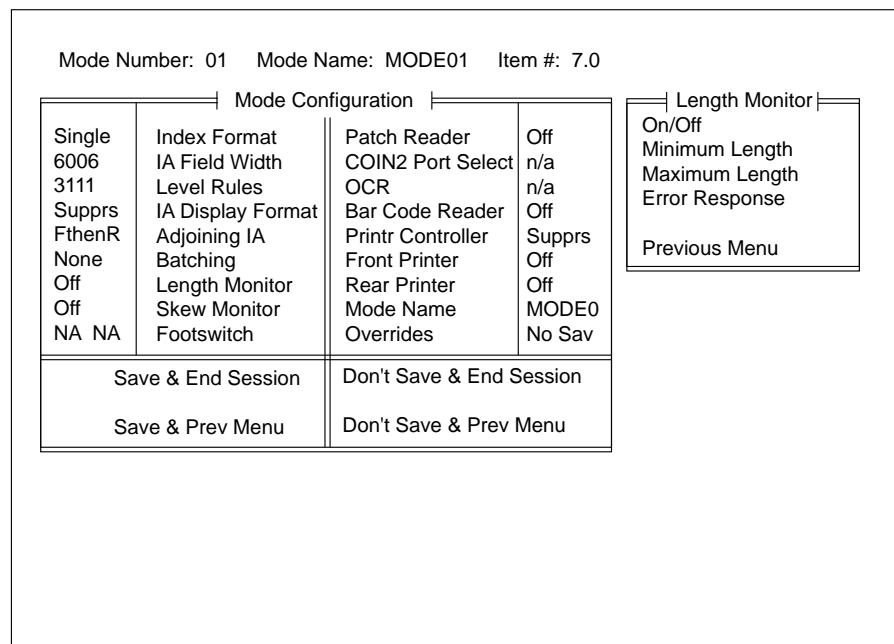

The batching option is *not available*.

- If you select *Batching* from the Mode Configuration window, the following message will appear: **Selection is not available**.
- Press *Enter* to close the message.
- Make another selection from the Mode Configuration window.

Length monitor

Length monitor defines the options required to enable/disable the document length monitor, set the minimum and maximum document lengths acceptable, and what action is to be taken when a document shorter than the minimum length or longer than the maximum length is fed into the Scanner 5500/7500.

- Select *Length Monitor* from the Mode Configuration window.

The following pages provide instructions on how to define the document length monitor options. When the length monitor definitions are complete, you will automatically be returned to this window.

To close the *Length Monitor* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

On/off

Enables or disables length monitoring.

The default for all modes is *Disable*.

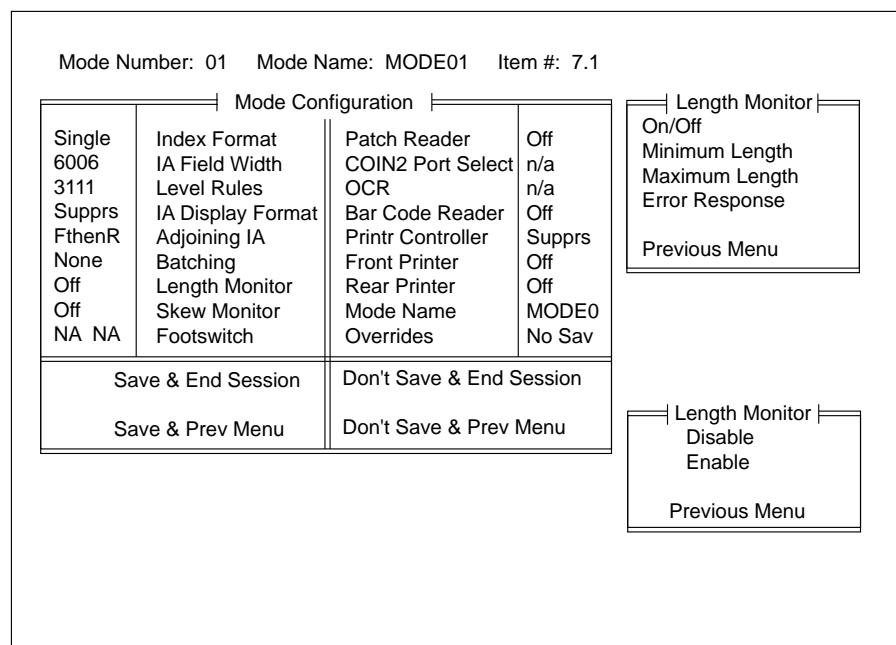

The options are:

— *Disable*—disables all length monitoring.

— *Enable*—enables all length monitoring.

NOTE: If *Disable* is selected, definitions for the remaining document length monitor options will be ignored.

- Select *On/Off* from the Length Monitor menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

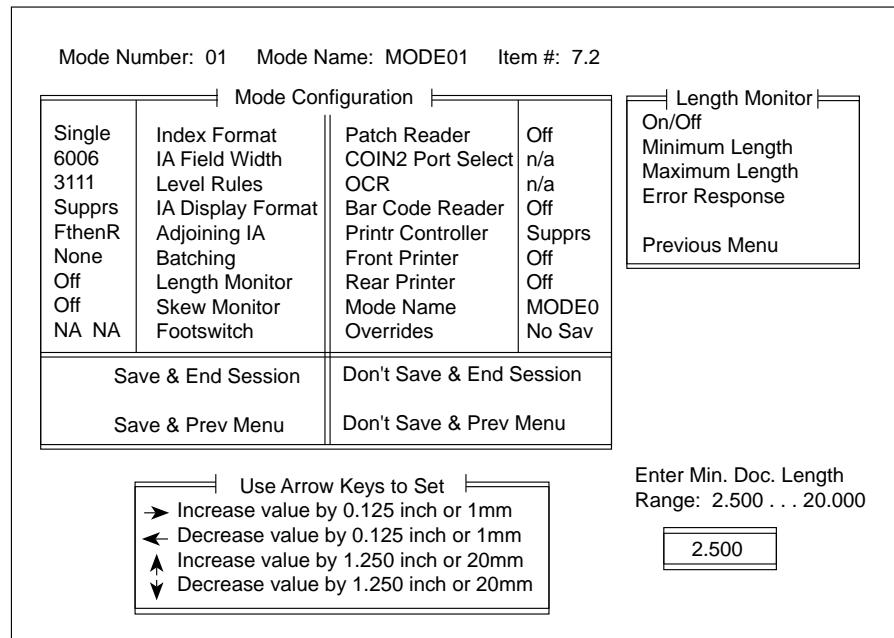

Minimum length

Defines the minimum document length accepted.

The default for all modes is *2.500 inches / 64 mm*.

The options are:

- Within the range of 2.500 inches / 64 mm minimum to 20.000 inches / 508 mm maximum.
- Select *Minimum Length* from the Length Monitor menu.

- Enter the desired minimum document length using the numeric keys;
- or
- Use the arrow keys to increase or decrease the current minimum document length to the desired minimum document length:
 - The left arrow key will decrease the value in 0.125 inch or 1 mm increments.
 - The right arrow key will increase the value in 0.125 inch or 1 mm increments.
 - The down arrow key will decrease the value in 1.250 inch or 20 mm increments.
 - The up arrow key will increase the value in 1.250 inch or 20 mm increments.
- Press *Enter*.

Maximum length

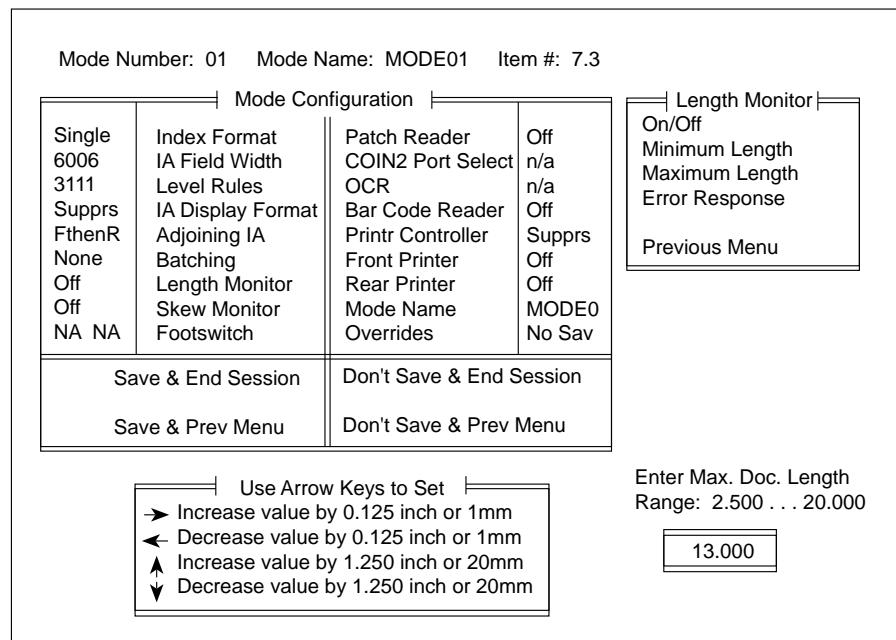

Defines the maximum document length accepted.

The default for all modes is *13.000 inches / 330 mm*.

The options are:

- Within the range of 2.500 inches / 64 mm minimum to 20.000 inches / 508 mm maximum.

- Select *Maximum Length* from the Length Monitor menu.

- Enter the desired maximum document length using the numeric keys;
- or
- Use the arrow keys to increase or decrease the current minimum document length to the desired maximum document length:
 - The left arrow key will decrease the value in 0.125 inch or 1 mm increments.
 - The right arrow key will increase the value in 0.125 inch or 1 mm increments.
 - The down arrow key will decrease the value in 1.250 inch or 20 mm increments.
 - The up arrow key will increase the value in 1.250 inch or 20 mm increments.
- Press *Enter*.

NOTE: A maximum document length of 17.000 inches / 432 mm or less is recommended based upon the capacity of the exit hopper.

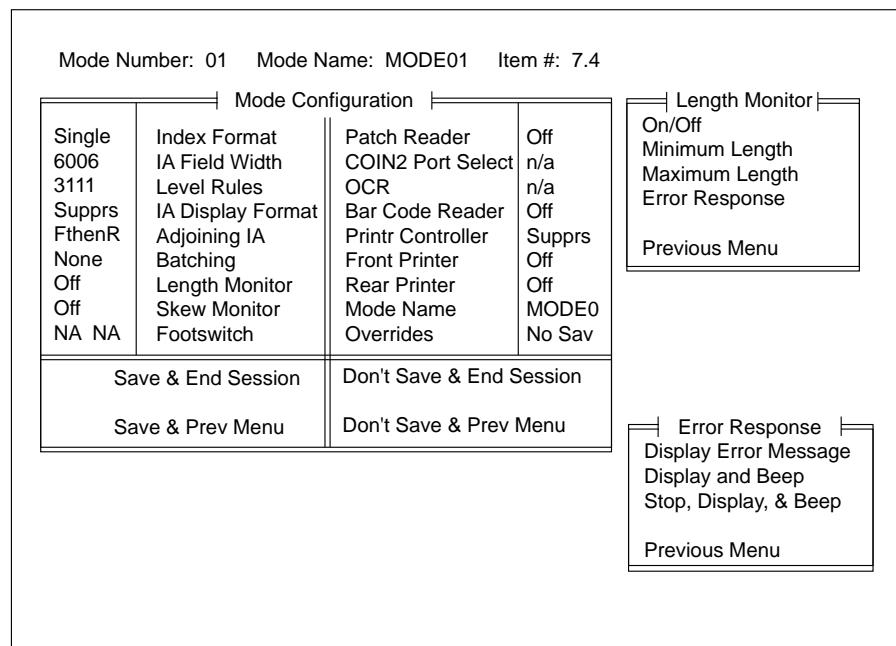

Error response

Error response defines the action taken when a document shorter than the minimum length or longer than the maximum length is fed into the Scanner 5500/7500.

The default for all modes is *Display and Beep*.

The options are:

- *Display Error Message*—results in an error message appearing on the Operator Control Panel (E106–Doc Length Monitor Warning).
 - *Display and Beep*—results in an error message appearing on the Operator Control Panel (E106–Doc Length Monitor Warning), accompanied by an error tone.
 - *Stop, Display, & Beep*—which results in the transport shutting down, and an error message appearing on the Operator Control Panel (E214–Re-Scan-Length Monitr Er), accompanied by an error tone.
- Select *Error Response* from the Length Monitor menu.

- Select the desired error response.
- Press *Enter*.

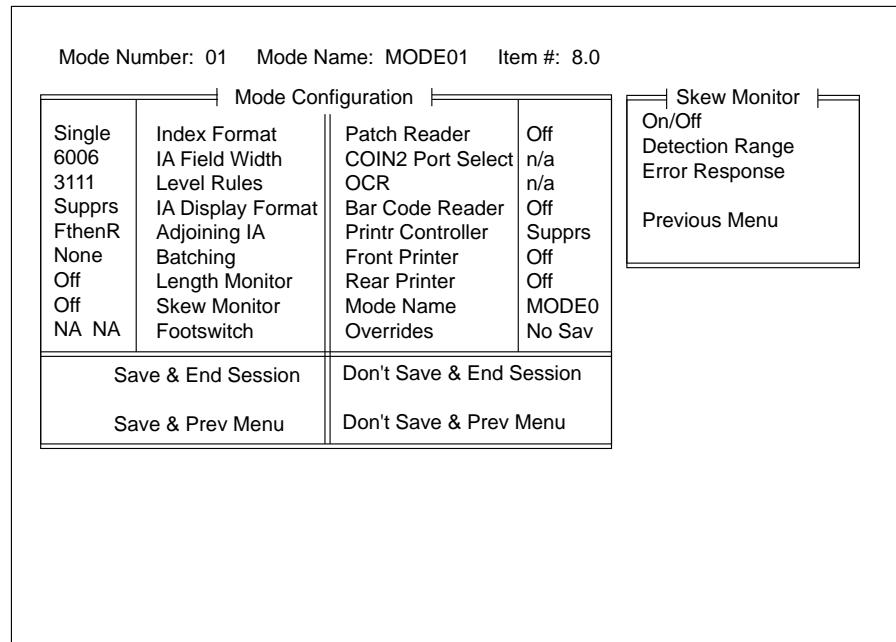

Skew monitor

Skew monitor defines the options required to enable/disable the document skew monitor, set the amount of acceptable document skew, and what action is to be taken when document skew is detected.

NOTE: In order for the skew monitor to operate correctly, the following conditions must be true:

- The amount of skew must be less than 30 degrees.
- The document(s) must be center-fed.
- The document(s) fed must be at least 3 inches / 75 mm wide.

- Select *Skew Monitor* from the Mode Configuration window.

The following pages provide instructions on how to define the document skew monitor options. When the skew monitor definitions are complete, you will automatically be returned to this window.

To close the *Skew Monitor* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

On/off

The on/off enables or disables skew monitoring.

The default for all modes is *Disable*.

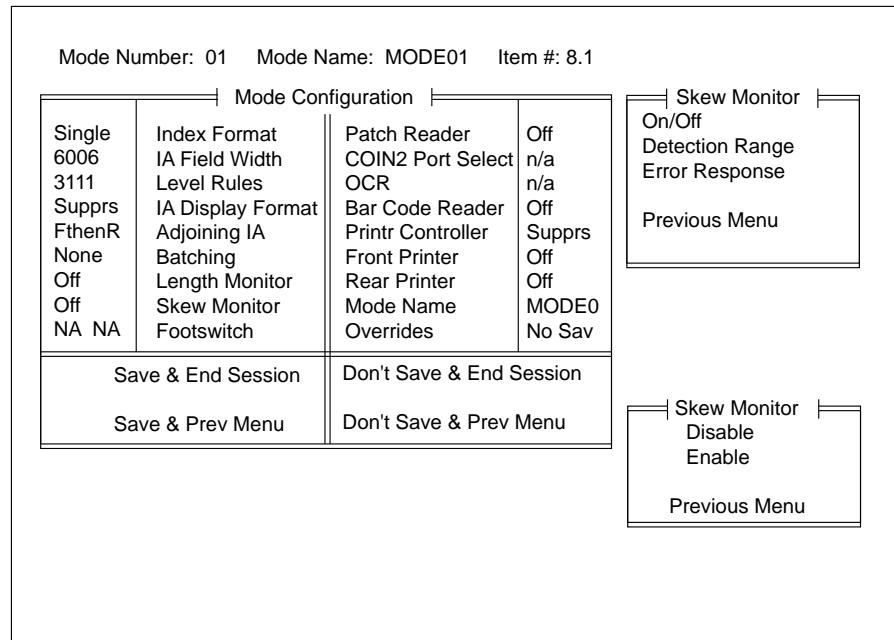

The options are:

— *Disable*—disables all skew monitoring.

— *Enable*—enables all skew monitoring.

NOTE: If *Disable* is selected, definitions for the remaining document skew monitor options will be ignored.

- Select *On/Off* from the Skew Monitor menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Detection range

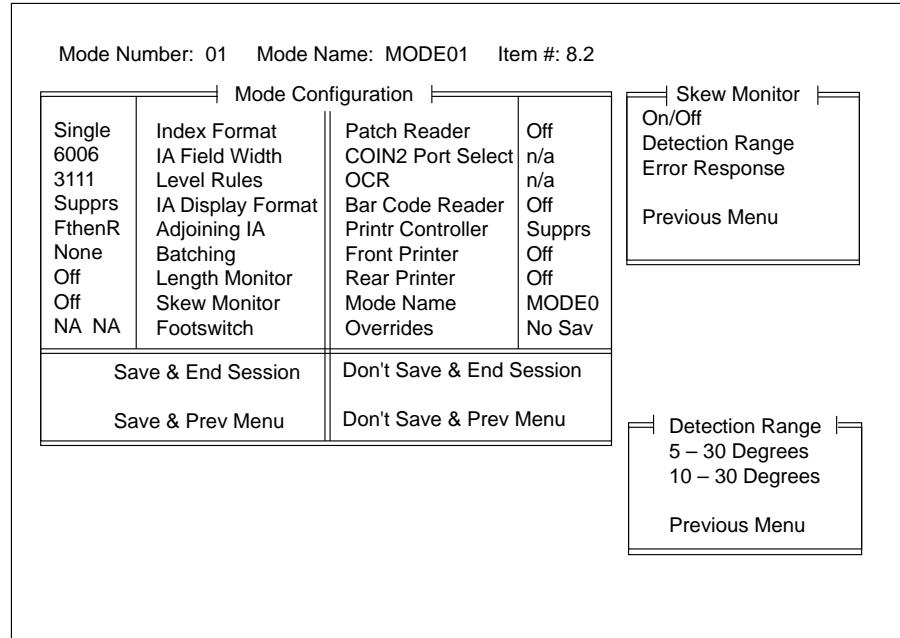

Detection range defines the amount of tolerable skew.

The default for all modes is *10–30 degrees*.

The options are:

- *5–30 degrees*—results in an error being reported if the amount of document skew is between 5 and 30 degrees.
- *10–30 degrees*—results in an error being reported if the amount of document skew is between 10 and 30 degrees.

- Select *Detection Range* from the Skew Monitor menu.

- Select the desired skew detection range.
- Press *Enter*.

Error response

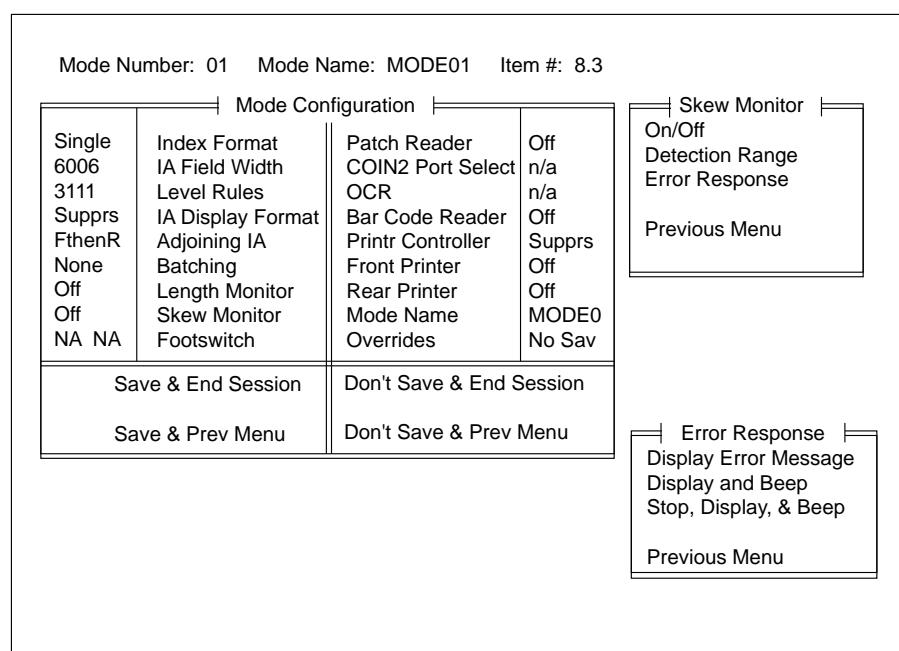

Error response defines the action taken when a document skew is detected.

The default for all modes is *Display and Beep*.

The options are:

- *Display Error Message*—results in an error message appearing on the Operator Control Panel (E107–Doc Skew Monitor Warning).
- *Display and Beep*—results in an error message appearing on the Operator Control Panel (E107–Doc Skew Monitor Warning), accompanied by an error tone.
- *Stop, Display, & Beep*—results in the transport shutting down, and an error message appearing on the Operator Control Panel (E204–Re-Scan-Skew Moniotr Er), accompanied by an error tone.

- Select *Error Response* from the Skew Monitor menu.

- Select the desired error response.
- Press *Enter*.

Footswitch

Footswitch defines the options required when using the footswitch accessory.

- Select *Footswitch* from the Mode Configuration window.

Mode Configuration			
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Printr Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav
Save & End Session Save & Prev Menu		Don't Save & End Session Don't Save & Prev Menu	
Footswitch Press Definition Confirmation Tone Release Definition Previous Menu			

The following pages provide instructions on how to define the footswitch options. When the footswitch definitions are complete, you will automatically be returned to this window.

To close the *Footswitch* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

Press definition

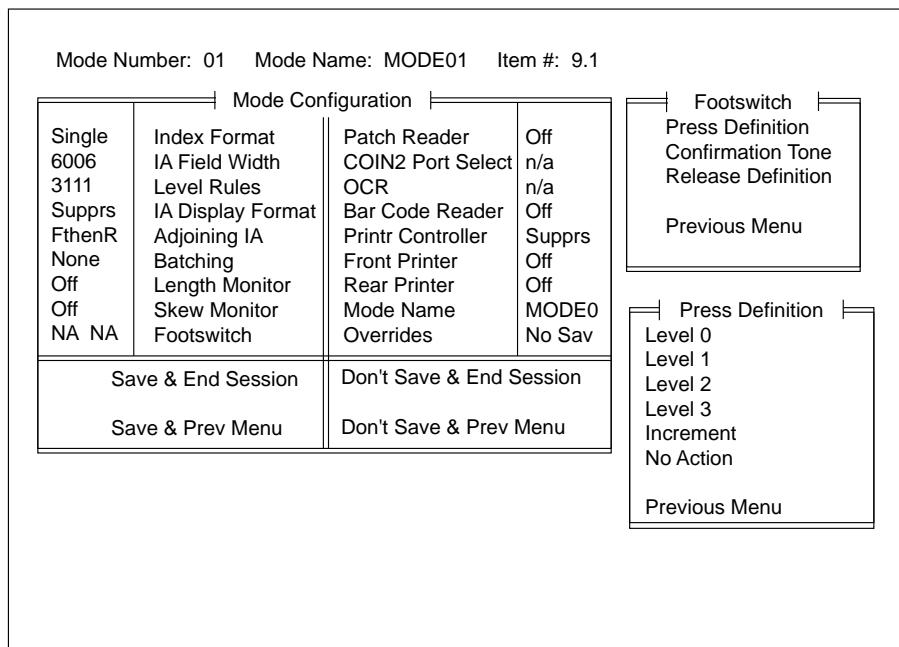

Press definition defines the action which is taken when the footswitch is pressed.

The default for all modes is *No Action*.

The options are:

- *Level 0*—document Level 0 will be assigned to the next document.
- *Level 1*—document Level 1 will be assigned to the next document.
- *Level 2*—document Level 2 will be assigned to the next document.
- *Level 3*—document Level 3 will be assigned to the next document.
- *Increment*—results in the next document being assigned the next document level, based upon the Level Rules established using the **Level Rules** option.
- *No Action*—results in no action taking place when the footswitch is pressed.

- Select *Press Definition* from the Footswitch menu.

- Select the desired action.
- Press *Enter*.

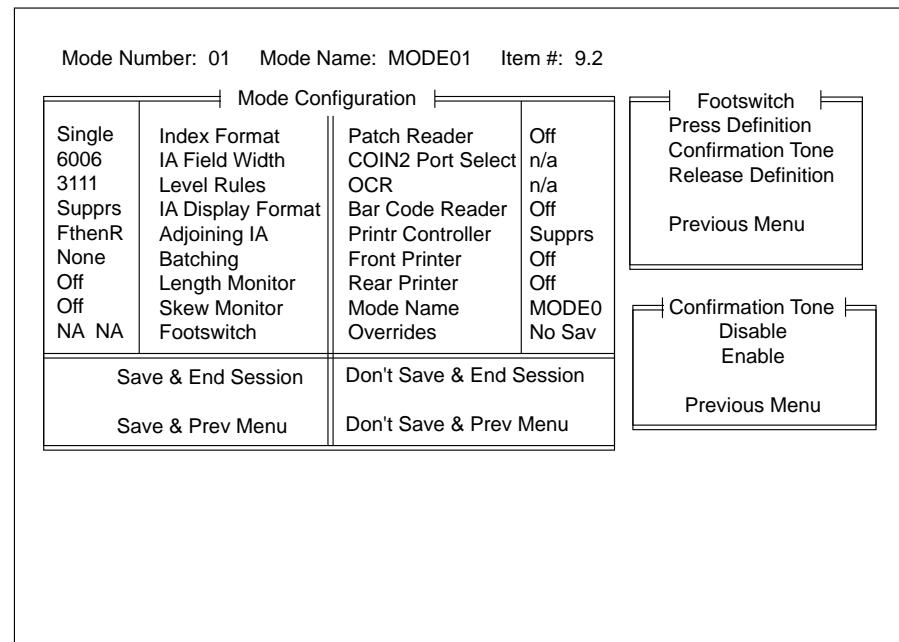

Confirmation tone

Confirmation tone enables or disables the Confirmation Tone which sounds when the Footswitch is pressed or released.

The default for all modes is *Disable*.

The options are:

- *Disable*—results in no tone sounding when the footswitch is pressed or released.
 - *Enable*—results in a tone sounding when the footswitch is pressed and released.
- Select *Confirmation Tone* from the Footswitch menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Release definition

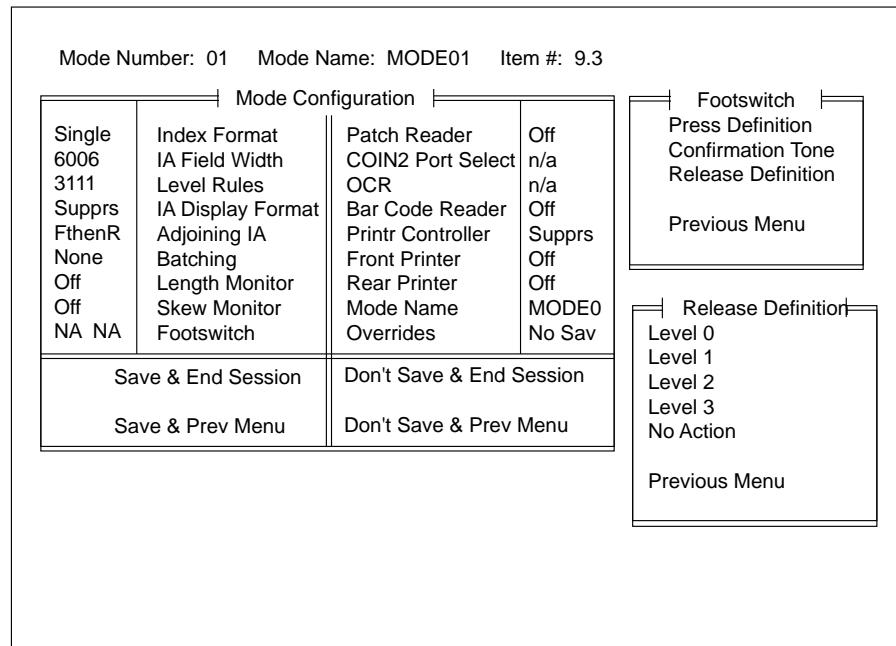

Release definition defines the action which is taken when the footswitch is released.

The default for all modes is *No Action*.

The options are:

- *Level 0*—document Level 0 will be assigned to the next document.
- *Level 1*—document Level 1 will be assigned to the next document.
- *Level 2*—document Level 2 will be assigned to the next document.
- *Level 3*—document Level 3 will be assigned to the next document.
- *No Action*—results in no action taking place when the footswitch is pressed.

- Select *Release Definition* from the Footswitch menu.

- Select the desired action.
- Press *Enter*.

Patch reader

NOTE: The patch reader is an accessory which must be installed and enabled by your Field Engineer.

Patch reader defines the options required when using the patch reader accessory.

- Select *Patch Reader* from the Mode Configuration window.

Mode Number: 01 Mode Name: MODE01 Item #: 10.0			
Mode Configuration		Patch Reader	
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Print Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav
Save & End Session		Don't Save & End Session	
Save & Prev Menu		Don't Save & Prev Menu	

The following pages provide instructions on how to define the patch reader options. When the patch reader definitions are complete, you will automatically be returned to this window.

To close the *Patch Reader* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

NOTE: If the patch reader was not defined as *Present* during Accessory Configuration, the following message will appear:
The accessory that you requested is not enabled in Accessory Configuration.

- Press *Enter* to clear the message.
- Exit from Mode Configuration; refer to the section entitled *Exiting Mode Configuration*.
- Select *Save & Previous Menu*.

Contact your Field Engineer to install and enable this accessory.

On/off

On/off enables or disables patch reading.

The default for all modes is *Disable*.

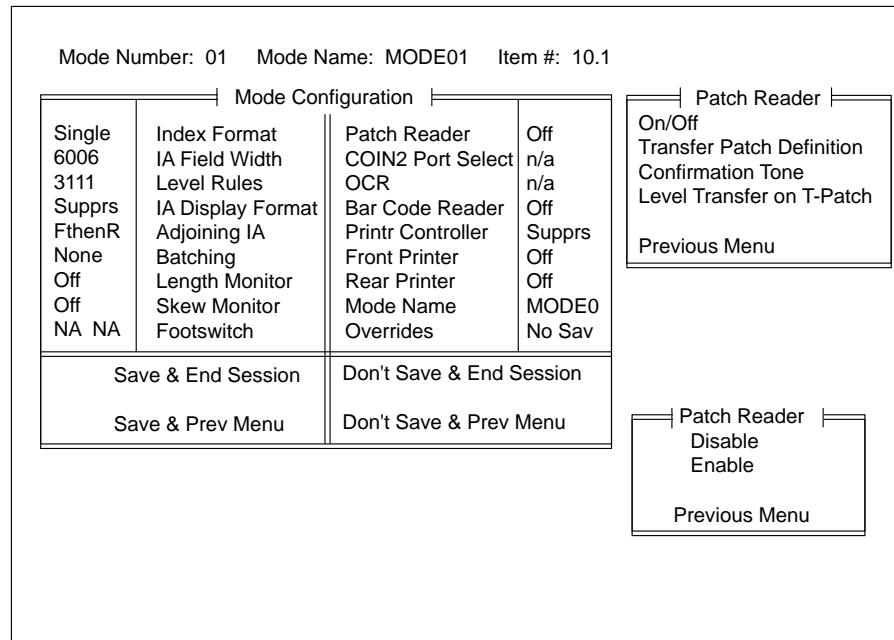

The options are:

— *Disable*—disables all patch reading.

— *Enable*—enables all patch reading.

NOTE: If *Disable* is selected, definitions for the remaining patch reader options will be ignored.

- Select *On/Off* from the Patch Reader menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Transfer patch definition

Transfer patch definition defines the document level assigned to the next document when a transfer patch is used.

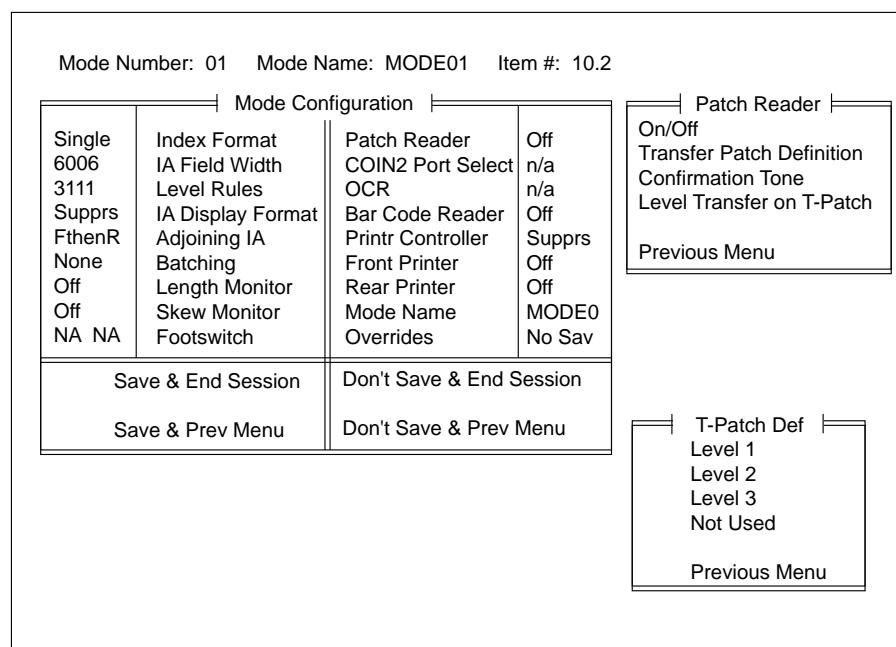

The default for all modes is *Not Used*.

The options are:

- *Level 1*—document Level 1 will be assigned to the next document.
- *Level 2*—document Level 2 will be assigned to the next document.
- *Level 3*—document Level 3 will be assigned to the next document.
- *Not Used*—indicates that transfer patches are not used.

NOTE: This definition is also used by the **Level Transfer on T-Patch** option, if that option is enabled.

- Select *Transfer Patch Definition* from the Patch Reader menu.

- Select the document level to be assigned to the next document when a transfer patch is used, or indicate that transfer patches will not be used.
- Press *Enter*.

Confirmation tone

Confirmation tone enables or disables the Confirmation Tone which sounds when a patch document is detected.

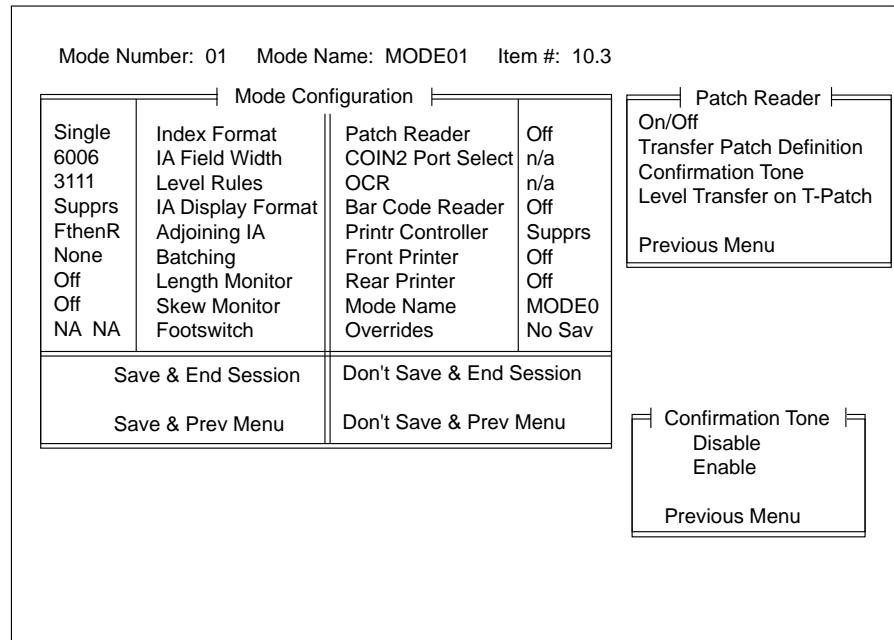

The default for all modes is *Disable*.

The options are:

— *Disable*—results in no tone sounding when a patch document is detected.

— *Enable*—results in a tone sounding when a patch document is detected.

- Select *Confirmation Tone* from the Patch Reader menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Level transfer on T-Patch

Level transfer on T-Patch defines whether the transfer patch definition is applied to the document containing the transfer patch or the next document fed into the Scanner 5500/7500.

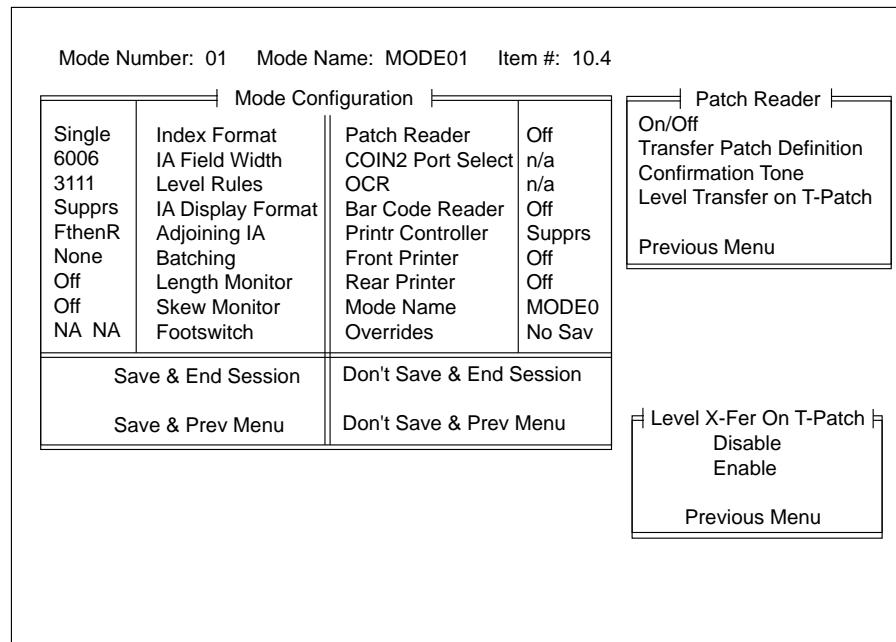

The default for all modes is *Disabled*.

The options are:

- *Disabled*—indicates that the next document fed into the Scanner 5500/7500 will be assigned the document level defined by the **Transfer Patch Definition** option.
- *Enabled*—indicates that the document containing the transfer patch will be assigned the document level defined by the **Transfer Patch Definition** option.

NOTE: If the **Transfer Patch Definition** option is enabled, *Level 1*, *Level 2*, or *Level 3* must be defined.

- Select *Level Transfer on T-Patch* from the Patch Reader menu.

- Select *Disable* or *Enable*.
- Press *Enter*.

COIN2 Port Select

The COIN2 Port Select option is *not available*.

- If you select *COIN2 Port Select* from the Mode Configuration window, the following message will appear: ***Selection is not available.***
- Press *Enter* to clear the message and make another selection from the Mode Configuration window.

OCR

The OCR option is *not available*.

- If you select *OCR* from the Mode Configuration window, the following message will appear: ***Selection is not available.***
- Press *Enter* to clear the message and make another selection from the Mode Configuration window.

Bar code reader

NOTE: The bar code reader is an accessory which must be installed and enabled by your Field Engineer.

Bar code reader defines the options required when using the bar code reader accessory.

- Select *Bar Code Reader* from the Mode Configuration window.

Mode Configuration				Bar Code Reader
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Print Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav	On/Off Bar Code Type Codes Per Document Minimum Code Length Maximum Code Height Scan Direction Code Quality Confirmation Tone Bar Code Location
Save & End Session		Don't Save & End Session		
Save & Prev Menu		Don't Save & Prev Menu		

The following pages provide instructions on how to define the bar code reader options. When the patch reader definitions are complete, you will automatically be returned to this window.

To close the *Bar Code Reader* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

NOTE: If the bar code reader was not defined as *Present* during Accessory Configuration, the following message will appear:
The accessory that you requested is not enabled in Accessory Configuration.

- Press *Enter*.
- Exit from Mode Configuration; refer to the section entitled, *Exiting Mode Configuration*.

Contact your Field Engineer to install and enable this accessory.

On/off

On/off enables or disables bar code reading.

The default for all modes is *Disable*.

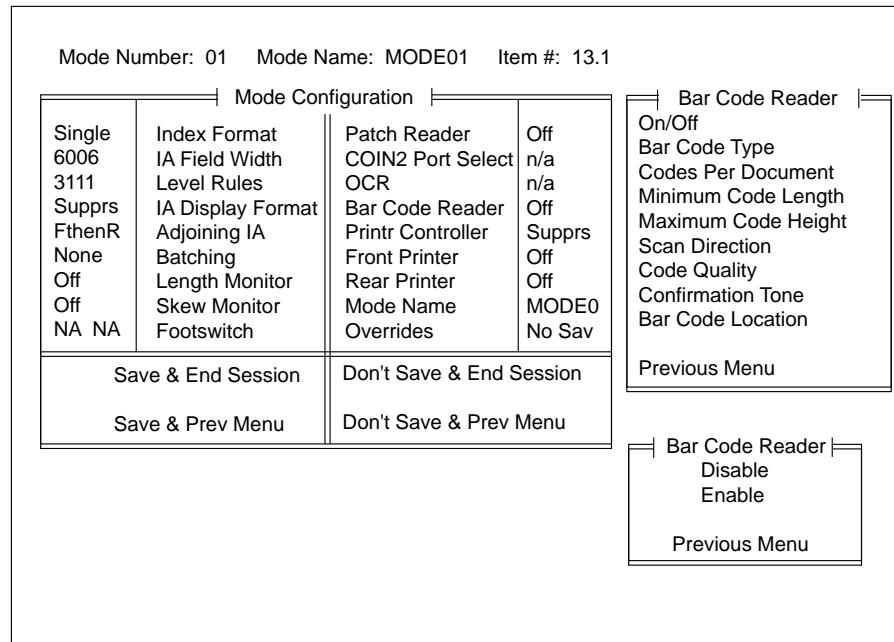

The options are:

— *Disable*—disables all bar code reading.

— *Enable*—enables all bar code reading.

NOTE: If *Disable* is selected, definitions for the remaining bar code reader options will be ignored.

- Select *On/Off* from the Bar Code Reader menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Bar code type

Bar code type defines the type of bar code which will be used.

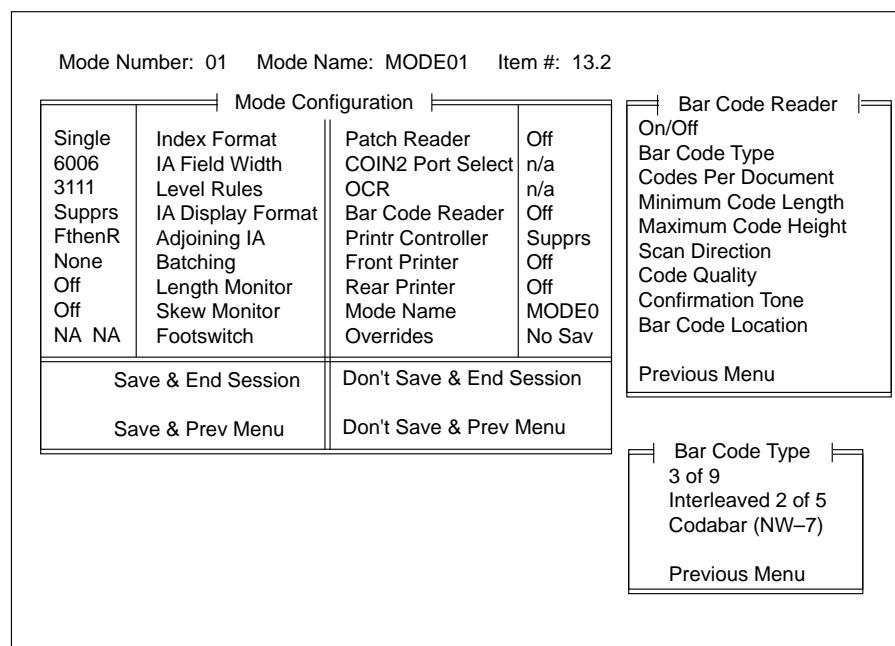

The default for all modes is *Codabar (NW-7)*.

The options are:

- *3 of 9*
- *Interleaved 2 of 5*
- *Codabar (NW-7)*.

NOTE: For additional information regarding these bar code types and their characteristics, refer to *Bar Code Made Easy* (A-61099).

- Select *Bar Code Type* from the Bar Code Reader menu.

- Select the type of bar code which will be used.

- Press *Enter*.

NOTE: Only one bar code type may be used with any one mode. However, different modes may be defined as using different bar code types.

Codes per document

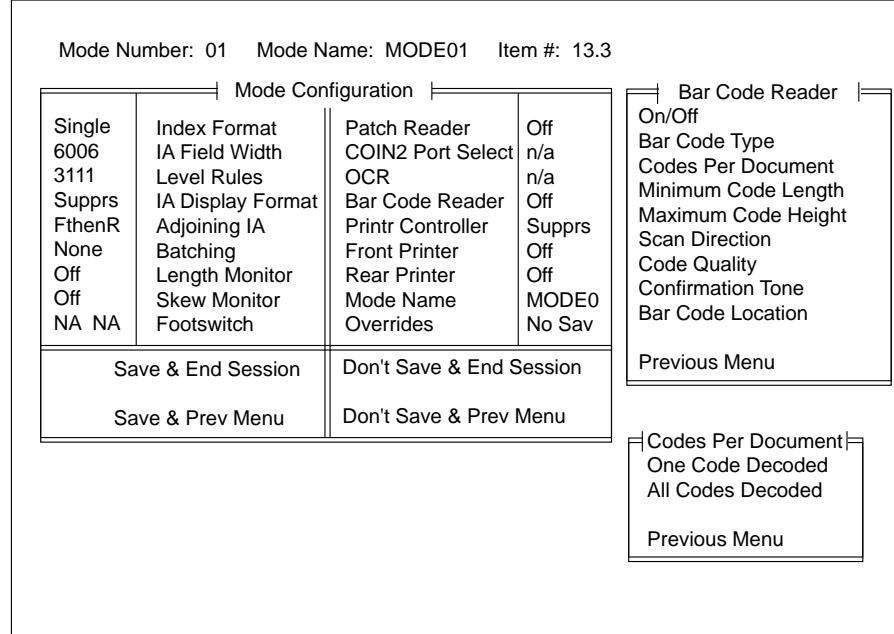

Codes per document defines the number of codes per document to be read/decoded.

The default for all modes is *One Code Decoded*.

The options are:

- *One Code Decoded*—results in only the first bar code encountered on a document being read/decoded.
- *All Codes Decoded*—results in all bar codes encountered on a document being read/decoded.

- Select *Codes Per Document* from the Bar Code Reader menu.

- Select the desired number of codes to be read/decoded.
- Press *Enter*.

NOTE: If the option *All Coded Decoded* is selected, you must also define the **Maximum Code Height** option. See the section entitled, *Maximum Code Height* for more information.

Minimum code length

Minimum code length defines the minimum bar code length allowed, in terms of the number of characters encoded.

The default for all modes is 3.

The options are:

— Within the range of 3 to 40 characters.

- Select *Minimum Code Length* from the Bar Code Reader menu.

Mode Number: 01 Mode Name: MODE01 Item #: 13.4			
Mode Configuration			
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Print Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav

Confirmation Tone
Bar Code Location

Previous Menu

Enter Minimum Code Length
Range: 3 – 40 characters

03

- Enter the desired bar code length, using the numeric keys. The maximum code length is 40.
- Press *Enter*.

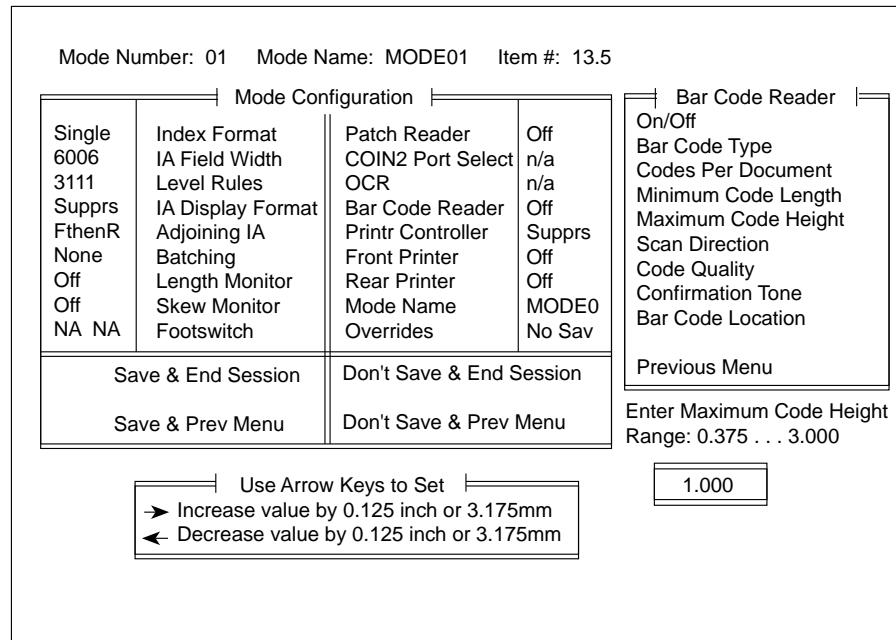

Maximum code height

Maximum code height defines the maximum bar code height allowed. This definition is required only when the Codes Per Document option is defined as *All Codes Decoded*.

The default for all modes is *1 inch / 25.400 mm*.

The options are:

- Within the range of 0.375 inches / 9.525 mm to 3.000 inches / 76.200 mm.
- Select *Maximum Code Height* from the Bar Code Reader menu.

- Enter the desired bar code height allowed, using the numeric keys;
or
- Use the arrow keys to increase or decrease the current maximum bar code height to the desired bar code height allowed:
 - The left arrow key will decrease the value in 0.125 inch or 3.175 mm increments.
 - The right arrow key will increase the value in 0.125 inch or 3.175 mm increments.
- Press *Enter*.

NOTE: The maximum code height also represents the minimum height between bar codes when codes per document option is defined as *All Codes Decoded*. If the bar codes are closer together than the measure of the maximum bar code height, bar code reading is impaired.

Scan direction

Scan direction defines whether the bar code is read in one direction; from left to right, or in two directions; from left to right or right to left.

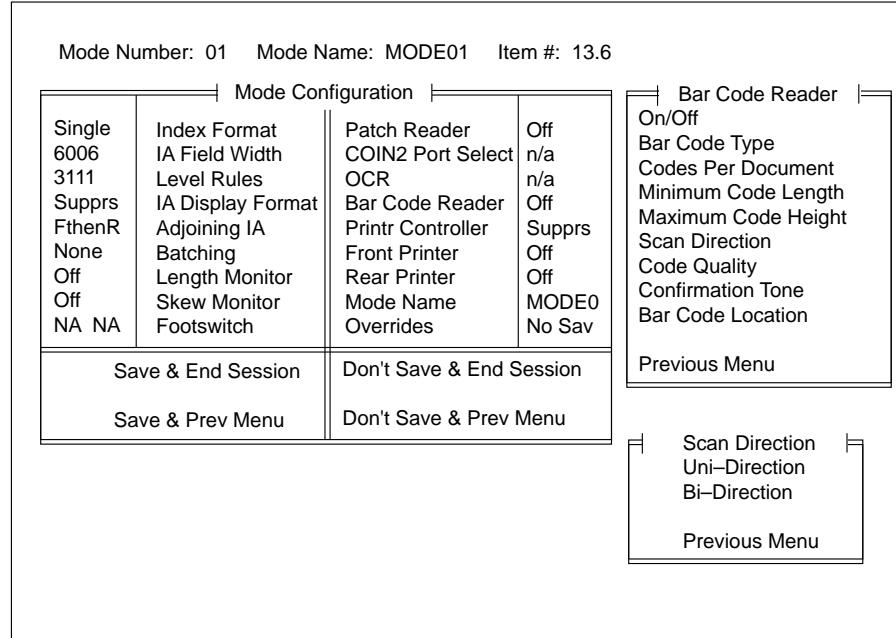

NOTE: When bar codes are read in two directions (bidirectional), the time required to read/decode bar codes is extended.

The default for all modes is *Unidirectional*.

The options are:

- *Unidirectional*—results in bar codes being read in only one direction (left to right), requiring that the start character be to the left.
- *Bidirectional*—results in bar codes being read in two directions (from left to right or right to left).

- Select *Scan Direction* from the Bar Code Reader menu.

- Select the desired scan direction.
- Press *Enter*.

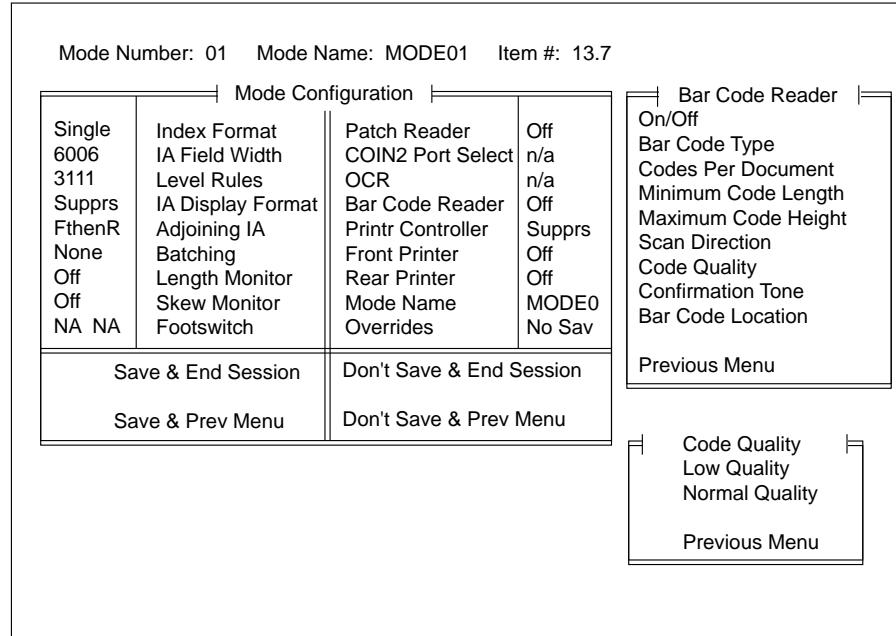

Code quality

Code quality defines whether image processing is required to enhance the overall quality of the bar codes to ensure the highest possible read rates. Typically, image processing is required only when dot matrix printers are used to generate the bar codes being read/decoded.

The default for all modes is *Normal Quality*.

The options are:

- *Low Quality*—results in image processing is performed to enhance bar code readability.
 - *Normal Quality*—results in no image processing performed; no enhancement is required for high bar code readability.
- Select *Code Quality* from the Bar Code Reader menu.

- Select the desired code quality option.
- Press *Enter*.

Confirmation tone

Confirmation tone enables or disables the confirmation tone which sounds when the bar code reader detects a bar code document.

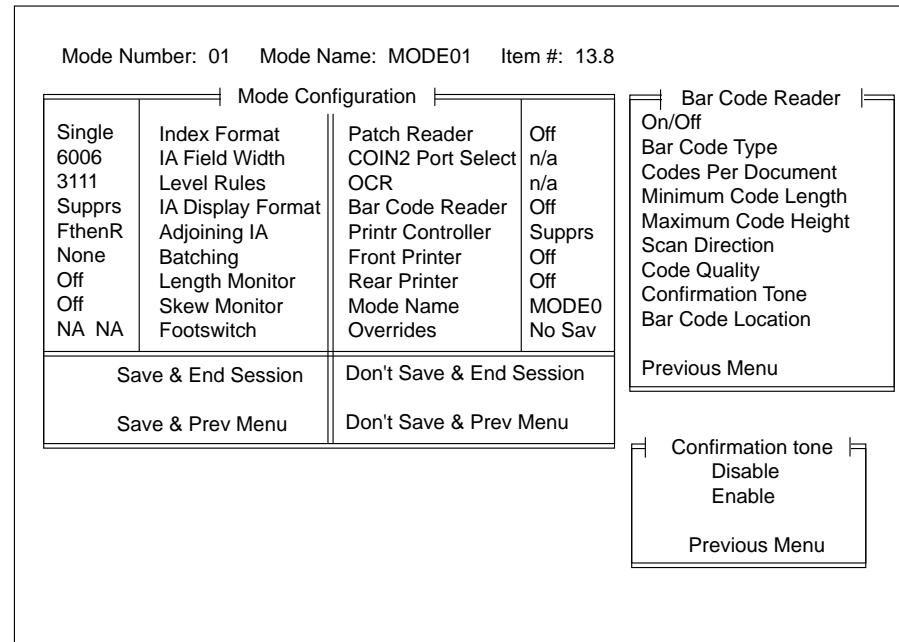

The default for all modes is *Disable*.

The options are:

— *Disable*—no tone will sound when a bar code document is detected.

— *Enable*—a tone will sound when a bar code document is detected.

- Select *Confirmation Tone* from the Bar Code Reader menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Bar code location

Bar code location defines whether the bar codes are to be located on the front or rear of the document(s).

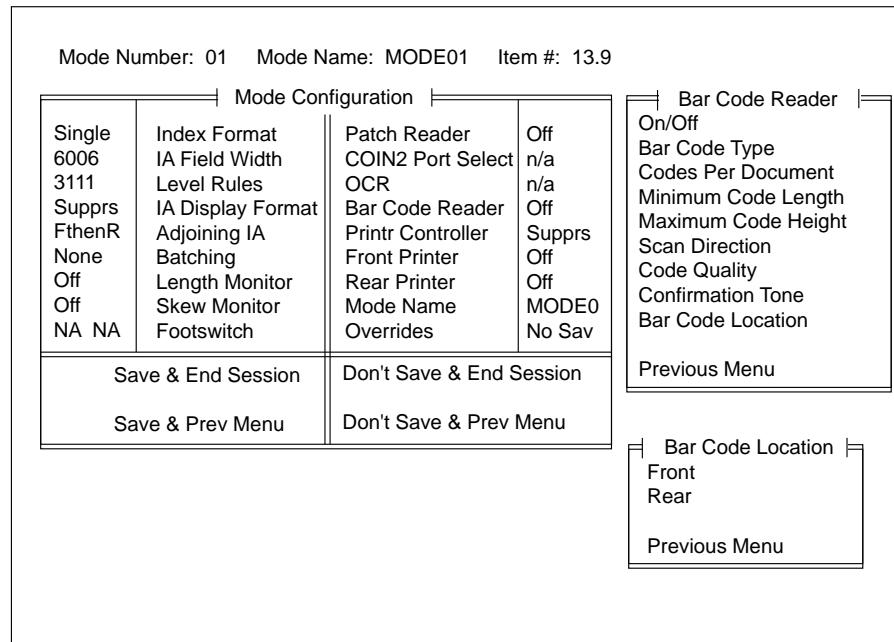

The default for all modes is *Front*.

The options are:

- *Front*—the bar code reader attempts to detect bar codes on the front side of each document.
- *Rear*—the bar code reader attempts to detect bar codes on the rear side of each document.

NOTE: This option is only valid when using a duplex Scanner 5500/7500. Also, if bar codes are located on the side opposite the side defined as the bar code location, then the bar codes will not be detected.

- Select *Bar Code Location* from the Bar Code Reader menu.

- Select the side of the document(s) on which bar codes will be placed.
- Press *Enter*.

Printer controller

NOTE: The printer controller is an accessory which must be installed and enabled by your Field Engineer.

Printer controller defines the options required when using the printer controller accessory with a Front Printer and/or a Rear Printer.

- Select *Printer Controller* from the Mode Configuration window.

Mode Configuration			
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Printr Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav
Save & End Session		Don't Save & End Session	
Save & Prev Menu		Don't Save & Prev Menu	

The following pages provide instructions on how to define the printer controller options. When the printer controller definitions are complete, you will automatically be returned to this window.

To close the *Printer Controller* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

NOTE: If the printer controller was not defined as *Present* during Accessory Configuration, the following message will appear:
The accessory that you requested is not enabled in Accessory Configuration.

- Press *Enter* to clear the message.
- Exit from Mode Configuration; refer to the section entitled, *Exiting Mode Configuration*.

Contact your Field Engineer to install and enable this accessory.

IA Print format

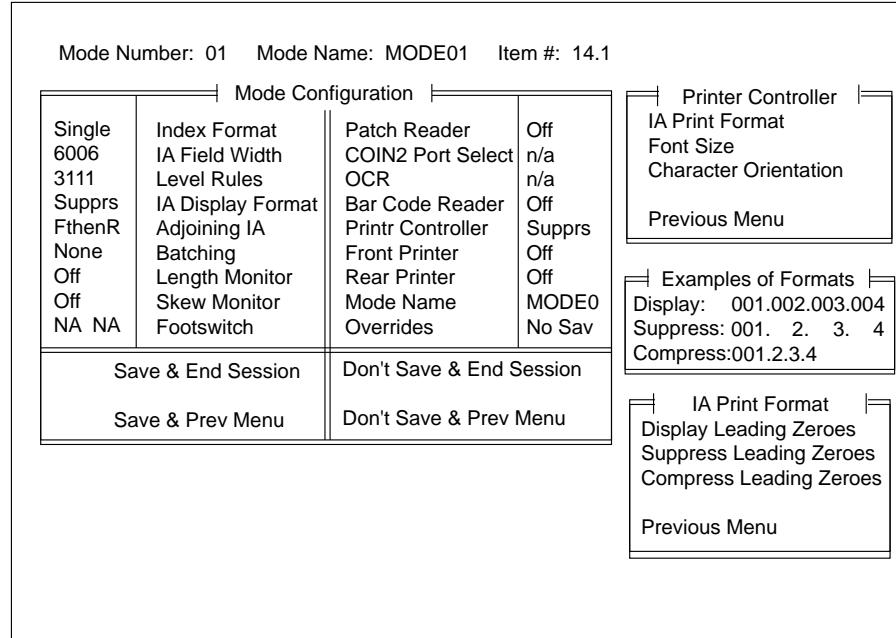

IA Print format defines the format of the image address printed by the front printer and/or the rear printer.

The default for all modes is *Suppress Leading Zeroes*.

The options are:

- *Display Leading Zeroes* (i.e., 001.002.003.004)
- *Suppress Leading Zeroes* (i.e., 001. 2. 3. 4)
- *Compress Leading Zeroes* (i.e., 001.2.3.4).

- Select *IA Print Format* from the Printer Controller menu.

- Select the desired Image Address print format.

- Press *Enter*.

Font size

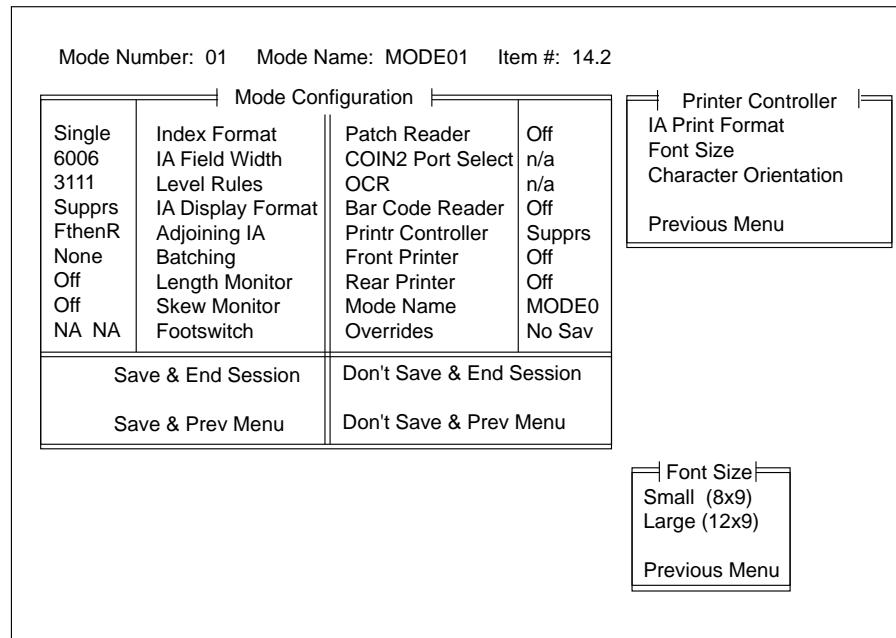

Font size defines the size of the characters printed by the front printer and/or the rear printer.

The default for all modes is *Small (8x9)*.

The options are:

- *Small (8x9)*—results in characters printed using an 8x9 matrix.
- *Large (12x9)*—results in characters printed using a 12x9 matrix.

- Select *Font Size* from the Printer Controller menu.

- Select the desired printed character font size.
- Press *Enter*.

Character orientation

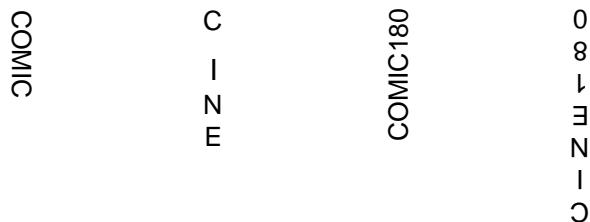

Defines the orientation of the characters printed by the front printer and/or the rear printer.

The default for all modes is *Cine*.

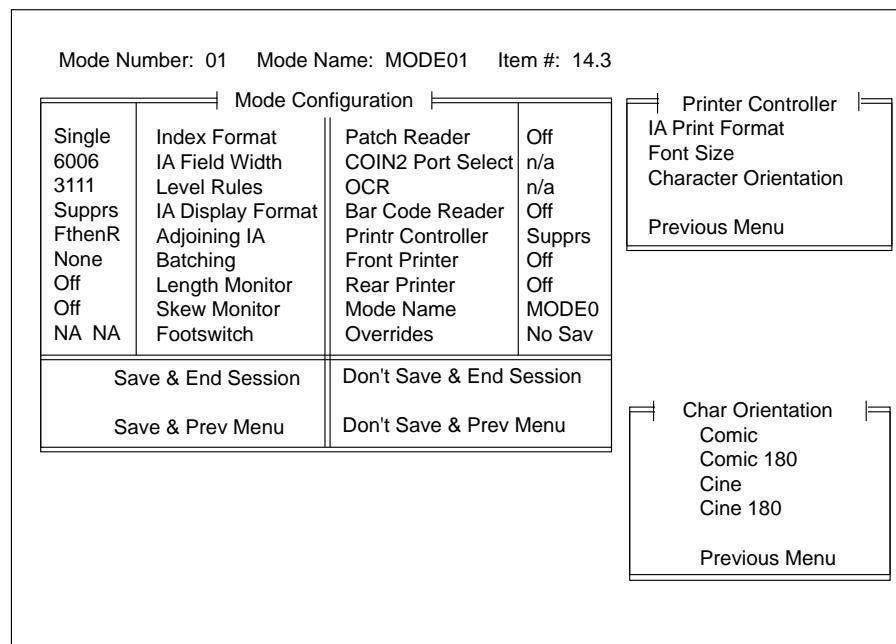

The options are:

- *Comic*
- *Comic 180*
- *Cine*
- *Cine 180*

The following illustrate the appearance of each orientation:

- Select *Character Orientation* from the Printer Controller menu.

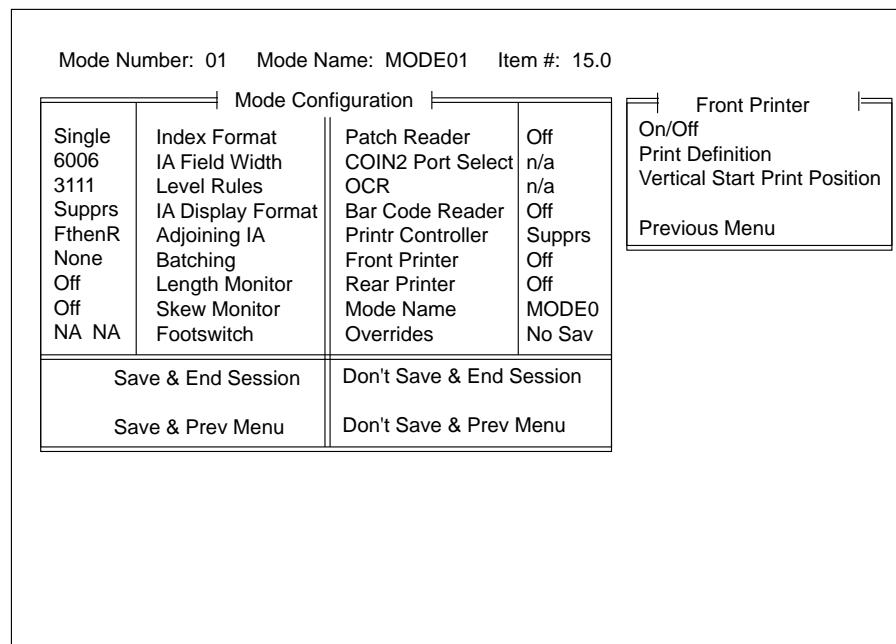

- Select the desired printed character orientation.
- Press *Enter*.

Front printer

NOTE: The front printer is an accessory which must be installed and enabled by your Field Engineer.

Front printer defines the options required when using the front printer accessory.

- Select *Front Printer* from the Mode Configuration window.

The following pages provide instructions on how to define the front printer options. When the front printer definitions are complete, you will automatically be returned to the Mode Configuration window.

To close the *Front Printer* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

NOTE: If the front printer was not defined as *Present* during Accessory Configuration, the following message will appear:
The accessory that you requested is not enabled in Accessory Configuration.

- Press *Enter* to clear the message.
- Exit from Mode Configuration; refer to the section entitled, *Exiting Mode Configuration*.

Contact your Field Engineer to install and enable this accessory.

On/off

On/off enables or disables printing by the front printer.

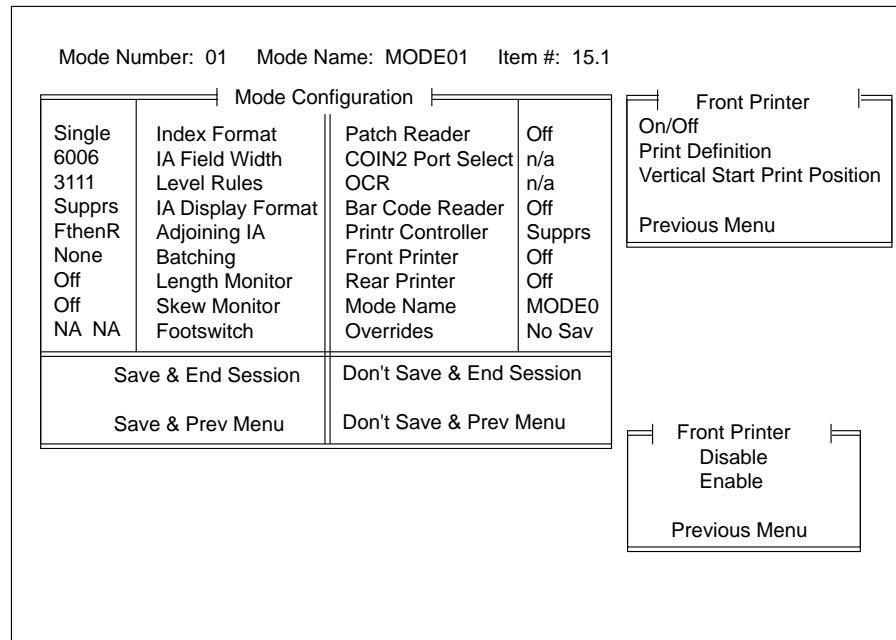

The default for all modes is *Disable*.

The options are:

- *Disable*—disables printing by the front printer.
- *Enable*—enables printing by the front printer.

NOTE: If *Disable* is selected, definitions for the remaining front printer options will be ignored.

- Select *On/Off* from the Front Printer menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Print definition

Print definition defines what information is printed by the front printer. This is dependent upon the document level assigned to the document being printed upon. You may choose one of five options. These options are described below. The procedure for choosing these options is further described on the following pages.

- **Same Format Per Level**—Defines what information is printed by the front printer on all documents, regardless of the document level assigned to the document. You may elect to print the same information on all documents, regardless of the document level assigned to the document. In this case, select the **Same Format Per Level** option.

You may elect to print different information on documents assigned different document levels. In this case, select the **Level 0, Level 1, Level 2, or Level 3** options, in turn, to define the print definitions for all valid document levels.
- **Level 0**—is a valid selection when using any one of the available index formats defined using the **Index Format** option. Defines what information is printed by the front printer on documents assigned document Level 0. The default for all modes is *Nothing* (i.e., nothing is printed on documents assigned document Level 0).
- **Level 1**—This menu option is a valid selection when using any one of the available index formats defined using the **Index Format** option. Level 1 defines what information is printed by the front printer on documents assigned document Level 1. The default for all modes is *Full IA w/ All Delimiters*. The options for Level 1 are listed in the window.
- **Level 2**—This menu option is a valid selection only when using any of the two-level (two level or two level offset) or three-level (three level or three level offset) index formats defined using the **Index Format** option. Defines what information is printed by the front printer on documents assigned document Level 2. The default for all modes is *Full IA w/ All Delimiters*. The options for Level 2 are listed in the window.
- **Level 3**—This menu option is a valid selection only when using any of the three-level (three level or three level offset) index formats defined using the **Index Format** option. Defines what information is printed by the front printer on documents assigned document Level 3. The default for all modes is *Full IA w/ All Delimiters*. The options for Level 3 are listed in the window.

The procedure for defining the previously mentioned options is described below. Defining Level 1 is used as an example.

- Select *Print Definition* from the Front Printer menu. The print definition options are displayed:

Mode Configuration				Front Printer
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Printr Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav	On/Off Print Definition Vertical Start Print Position Previous Menu
Save & End Session		Don't Save & End Session		Print Definition Same Format Per Level Level 0 Level 1 Level 2 Level 3 Previous Menu
Save & Prev Menu		Don't Save & Prev Menu		

- Select *Level 1* from the Print Definition menu. The box entitled *Current Print Sequence Display Items* contains the current print definition for Level 1 documents. The box entitled *New Print Sequence Display Items* should be blank.

NOTE: The options listed on the displayed menu are the same whether you select: Same Format Per Level, Level 0, Level 1, Level 2 or Level 3.

Mode Number: 01 Mode Name: MODE01 Item #: 15.2				Full IA w/ All Delimiters Full IA w/ No Delimiters Full IA w/ Fixed Fld Del Fixed Field Field C.Field B.Field A Current Level Field Fixed Field Delimiter Total Doc Counter (F09) Spaces (1 – 38) Date Day Time Message 1 Message 2 Message 3 Message 4 Message 5 Message 6 Message 7 Message 8 Message 9 Nothing Previous Menu
Current Print Sequence Display Items				<Full IA All Del>
New Print Sequence Display Items				

- Select an item from the list of print definition options.
- Press *Enter*. The item selected should appear in the *New Print Sequence Display Items* box.

Repeat this step for each item you wish to include in the print definition for Level 1 document.

NOTE: The front printer will print a maximum of 38 characters-per-document. If the print definition exceeds 38 characters, only the first 38 characters will be printed.

- Select *Previous Menu* from the list of print definition options to return to the previous window.

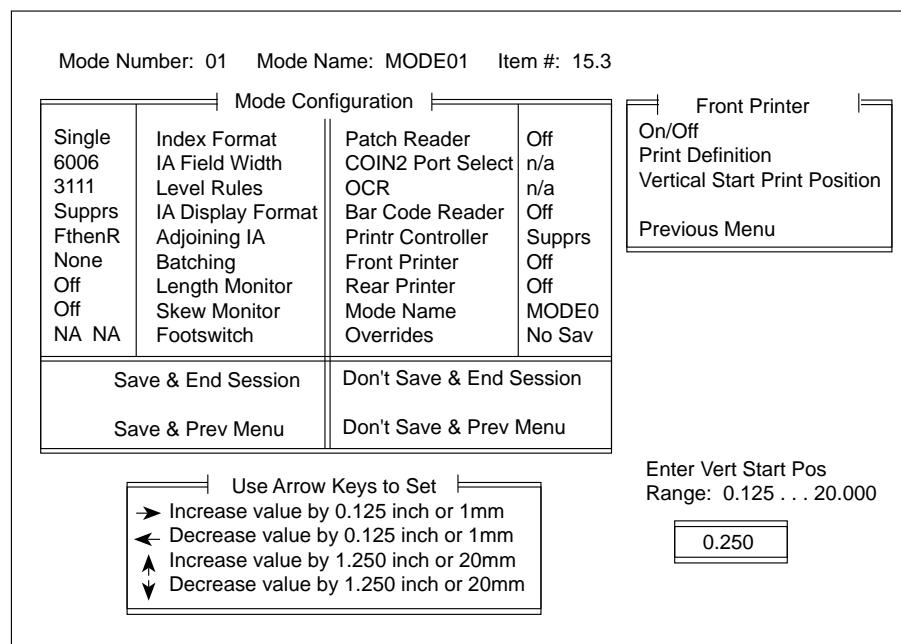

Vertical start print position

The vertical start print position defines how far from the leading edge of the document(s) the information printed by the front printer will appear.

The default for all modes is *0.250 inches / 6 mm*.

The options are:

- Within the range of 0.125 inches / 3 mm minimum to 20.000 inches / 508 mm maximum.
- Select *Vertical Start Print Position* from the Front Printer menu.

- Enter the desired distance between the leading edge of the document and where the printed information is to appear, using the numeric keys;
- or

- Use the arrow keys to increase or decrease the current distance:
 - The left arrow key will decrease the value in 0.125 inch or 1 mm increments.
 - The right arrow key will increase the value in 0.125 inch or 1 mm increments.
 - The down arrow key will decrease the value in 1.250 inch or 20 mm increments.
 - The up arrow key will increase the value in 1.250 inch or 20 mm increments.
- Press *Enter*.

Rear printer

NOTE: The rear printer is an accessory which must be installed and enabled by your Field Engineer.

Rear printer defines the options required when using the rear printer accessory.

- Select *Rear Printer* from the Mode Configuration window.

Mode Number: 01 Mode Name: MODE01 Item #: 16.0			
Mode Configuration			
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Printr Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav
Save & End Session Save & Prev Menu		Don't Save & End Session Don't Save & Prev Menu	
Rear Printer On/Off Print Definition Vertical Start Print Position Previous Menu			

The following pages provide instructions on how to define the rear printer options. When the rear printer definitions are complete, you will automatically be returned to this window.

To close the *Rear Printer* menu:

- Select *Previous Menu*. Proceed to make any additional mode configuration definitions.

NOTE: If the rear printer was not defined as *Present* during Accessory Configuration, the following message will appear:
The accessory that you requested is not enabled in Accessory Configuration.

- Press *Enter* to clear the message.
- Exit from Mode Configuration; refer to the section entitled, *Exiting Mode Configuration*.

Contact your Field Engineer to install and enable this accessory.

On/off

On/off enables or disables printing by the rear printer.

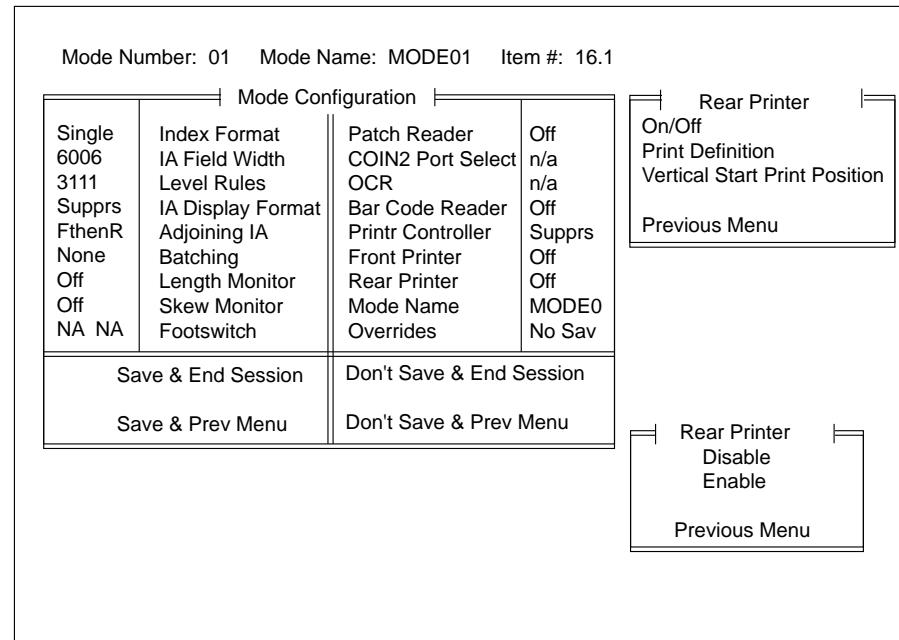

The default for all modes is *Disable*.

The options are:

- *Disable*—disables printing by the rear printer.
- *Enable*—enables printing by the rear printer.

NOTE: If *Disable* is selected, definitions for the remaining rear printer options will be ignored.

- Select *On/Off* from the Rear Printer menu.

- Select *Disable* or *Enable*.

- Press *Enter*.

Print definition

Print definition defines what information is printed by the rear printer on all documents, regardless of the document level assigned to the document. You may choose one of five options. These options are described below. The procedure for choosing these options is further described on the following pages.

- **Same Format Per Level**—Defines what information is printed by the rear printer on all documents, regardless of the document level assigned to the document. You may elect to print the same information on all documents, regardless of the document level assigned to the document. In this case, select the **Same Format Per Level** option.

You may elect to print different information on documents assigned different document levels. In this case, select the **Level 0, Level 1, Level 2, or Level 3** options, in turn, to define the print definitions for all valid document levels.

- **Level 0**—is a valid selection when using any one of the available index formats defined using the **Index Format** option. Defines what information is printed by the rear printer on documents assigned document Level 0. The default for all modes is *Nothing* (i.e., nothing is printed on documents assigned document Level 0).
- **Level 1**—This menu option is a valid selection when using any one of the available index formats defined using the **Index Format** option. Level 1 defines what information is printed by the rear printer on documents assigned document Level 1. The default for all modes is *Full IA w/ All Delimiters*. The options for Level 1 are listed in the window.
- **Level 2**—This menu option is a valid selection only when using any of the two-level (two level or two level offset) or three-level (three level or three level offset) index formats defined using the **Index Format** option. Defines what information is printed by the rear printer on documents assigned document Level 2. The default for all modes is *Full IA w/ All Delimiters*. The options for Level 2 are listed in the window.
- **Level 3**—This menu option is a valid selection only when using any of the three-level (three level or three level offset) index formats defined using the **Index Format** option. Defines what information is printed by the rear printer on documents assigned document Level 3. The default for all modes is *Full IA w/ All Delimiters*. The options for Level 3 are listed in the window.

The procedure for defining the previously mentioned options is described below. Defining Level 1 is used as an example.

- Select *Print Definition* from the Rear Printer menu. The print definition options are displayed:

Mode Configuration				Rear Printer On/Off Print Definition Vertical Start Print Position Previous Menu
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Print Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav	
Save & End Session Save & Prev Menu		Don't Save & End Session Don't Save & Prev Menu		
				Print Definition Same Format Per Level Level 0 Level 1 Level 2 Level 3 Previous Menu

Select *Level 1* from the Print Definition menu. The box entitled, *Current Print Sequence Display Items* contains the current print definition for Level 1 documents. The box entitled, *New Print Sequence Display Items* should be blank.

Mode Number: 01 Mode Name: MODE01 Item #: 16.2		Full IA w/ All Delimiters Full IA w/ No Delimiters Full IA w/ Fixed Fld Del Fixed Field Field C.Field B.Field A Current Level Field Fixed Field Delimiter Total Doc Counter (F09) Spaces (1 – 38) Date Day Time Message 1 Message 2 Message 3 Message 4 Message 5 Message 6 Message 7 Message 8 Message 9 Nothing Previous Menu
Current Print Sequence Display Items		<Full IA All Del>
New Print Sequence Display Items		

NOTE: The options listed on the displayed menu are the same whether you select: Same Format Per Level, Level 0, Level 1, Level 2 or Level 3.

The box entitled *Current Print Sequence Display Items* contains the current print definition for Level 1 documents. The box entitled *New Print Sequence Display Items* should be blank.

- Select an item from the list of print definition options.

The item selected should appear in the *New Print Sequence Display Items* box.

Repeat this step for each item you wish to include in the print definition for Level 1 documents.

NOTE: The rear printer will print a maximum of 38 characters-per-document. If the print definition exceeds 38 characters, only the first 38 characters will be printed.

- Select *Previous Menu* from the list of print definition options.

Vertical start print position

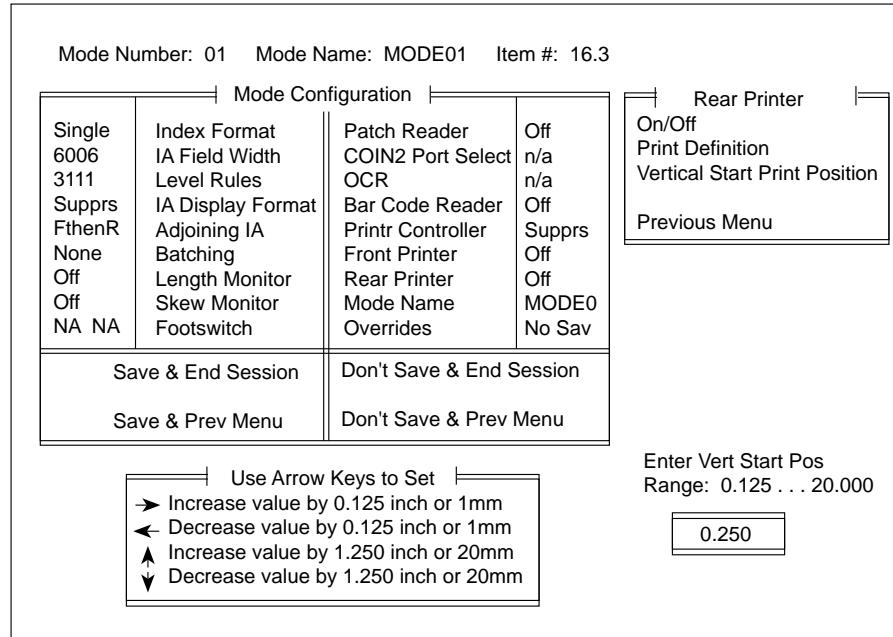

Vertical start print position defines how far from the leading edge of the document(s) the information printed by the rear printer will appear.

The default for all modes is *0.250 inches / 6 mm*.

The options are:

— Within the range of 0.125 inches / 3 mm minimum to 20.000 inches / 508 mm maximum.

- Select *Vertical Start Print Position* from the Rear Printer menu.

- Enter the desired distance between the leading edge of the document and where the printed information is to appear, using the numeric keys;

or

- Use the arrow keys to increase or decrease the current distance:
 - The left arrow key will decrease the value in 0.125 inch or 1 mm increments.
 - The right arrow key will increase the value in 0.125 inch or 1 mm increments.
 - The down arrow key will decrease the value in 1.250 inch or 20 mm increments.
 - The up arrow key will increase the value in 1.250 inch or 20 mm increments.
- Press *Enter*.

Mode name

Mode name defines a name for the mode.

The default is *MODE xx*, where *xx* is the 2-digit mode number (i.e., 01 – 18).

The options are:

- Any name with 7 or less (≤ 7) characters. Available characters include upper- and lowercase alphanumerics and any other ASCII character appearing in a standard keyboard.
- Select *Mode Name* from the Mode Configuration window.

Mode Configuration			
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Printr Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav

Front Printer On/Off Print Definition Vertical Start Print Position Previous Menu			
Enter Mode Name <input type="text" value="MODE 01"/> Up to 7 characters			

- Enter the desired mode name.
- Press *Enter*.

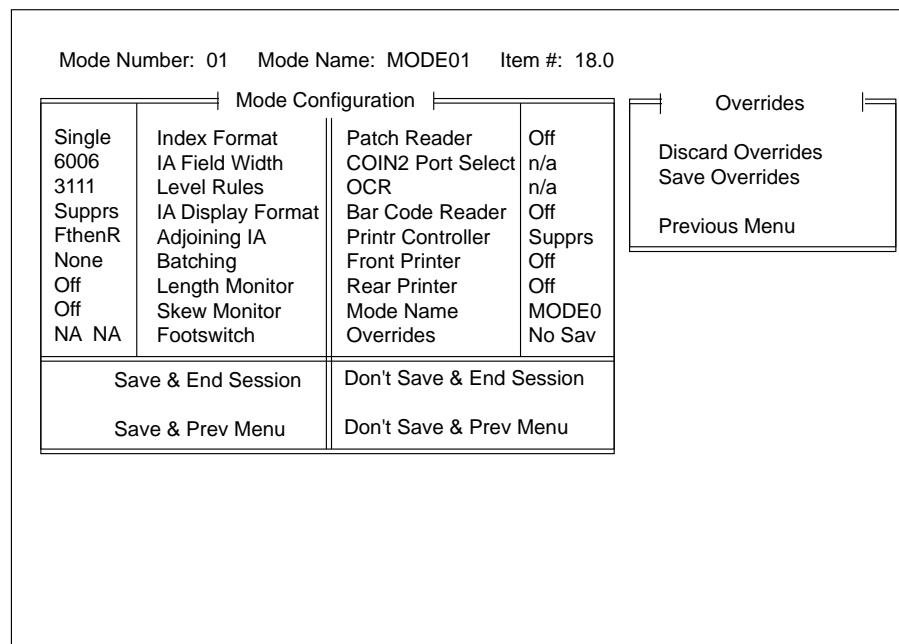

Overrides

Overrides enable or disable mode overrides.

The default for all modes is *Discard Overrides*.

The options are:

- *Discard Overrides*—results in the use of function codes to change programming options being temporary—not overriding the definitions made here.
 - *Save Overrides*—results in the use of function codes to change programming options being saved—overriding the definitions made here.
- Select *Overrides* from the Mode Configuration window.

- Select the desired override option.
- Press *Enter*.

Exiting the mode configuration menu

When all of the mode configuration options have been defined for current mode, you will exit the Mode Configuration window.

- Select one of the options listed below from the Mode Configuration window:

Mode Configuration			
Single 6006 3111 Supprs FthenR None Off Off NA NA	Index Format IA Field Width Level Rules IA Display Format Adjoining IA Batching Length Monitor Skew Monitor Footswitch	Patch Reader COIN2 Port Select OCR Bar Code Reader Print Controller Front Printer Rear Printer Mode Name Overrides	Off n/a n/a Off Supprs Off Off MODE0 No Sav
	Save & End Session	Don't Save & End Session	
	Save & Prev Menu	Don't Save & Prev Menu	

- *Save & End Session*—results in all definitions made during the session being saved and returning to the DOS prompt.
- *Save & Previous Menu*—results in all definitions made during the session being saved and returning to the Configuration Selection window.
- *Don't Save & End Session*—results in none of the definitions made during the session being saved and returning to the DOS prompt.
- *Don't Save & Previous Menu*—results in none of the definitions made during the session being saved and returning to the Configuration Selection window.
- Press *Enter* after making your selection.

Appendix B Language support

When inputting messages which contain non-ASCII standard characters, refer to the following tables to determine the code assigned to the desired character to be input and then follow the procedure outlined below:

NOTE: The message input may have up to 38 characters.

- Enter any standard ASCII text using the keyboard, if desired.
- To enter non-ASCII standard text:
 - Press the ALT key to display the Code input box:

Msg. No.	Definition Printer Messages	
	1	
	2	
	3	
	4	
	5	CODE
	6	
	7	
	8	
	9	
5 ABC		

NOTE: This example assumes that you have selected Message 5 for definition and have already entered standard ASCII text ABC.

Enter the code assigned to the desired character to be input. Refer to the tables which follow if the code has not already been determined.

7	
8	
9	
5	ABC

NOTE: In this example, it has been determined that the desired character is a **Æ**, and the code which corresponds to this character is 191.

- Press *Enter* to input the code and close the Code box.

The character will be input to the message.

5	ABCÆ

NOTE: The character displayed at the bottom of the window may be a representative character, not always the character which corresponds to the code. This is because the monitor may not provide language support.

- Press *Enter* to place the message in the message table when all desired message information has been inputted.

You will be asked to confirm the replacement of the current contents of the message with the new message input. When the message, **Replace Msg?** appears:

- Select *Yes* to confirm that the new message input should replace the old message in the Print Message Definition area; or

Select *No* to cancel the replacement of the old message with the new message input.
