

1480279 WATER PUMP ASSEMBLY

Installation Instructions

This replacement pump assembly is used on current model and many older model Manitowoc ice machines.

Manitowoc's water pump is designed for an extremely long life and trouble-free performance. This pump will fit most Manitowoc ice machines.

The discharge port located on the base of the water pump can be rotated, if necessary, for proper positioning in the ice machine. If it is required to rotate the water pump, remove the three machine screws from the pump, turn the base to the desired position, and reinsert the screws. The positioning holes are spaced every 60° in the water pump.

When installing this water pump, remove the water flow clamp from all ice machines except the regular cube size.
