SUITED FOR:

- Suited for: iPad, iPad2 and new iPad

DESCRIPTION

Create a WiFi hotspot and share your Internet connection at a hotel room. With the EM4600 WiFi Travel Router you can create a WiFi hotspot by yourself and share this connection with other wireless devices. At the same time it performs the role of a WiFi repeater. The WiFi Travel Router is powered by your iPad charger. The unique design will ensure that the EM4600 is the perfect accessory for your iPad.

Connect easily

Plug your iPad charger in the power socket and connect the WiFi Travel Router to it by putting it at the back of the iPad charger. Connect the UTP-cable, which is available at the hotel room, to the WAN-port of the WiFi Travel Router. You can detect easily the wireless network with your iPad, iPod and iPhone. These simple steps will ensure a simple creation of a WiFi hotspot.

Share your connection

Multiple wireless devices can use your WiFi hotspot. You can share your connection with other iPads, iPods, iPhones and other wireless communication devices.

Repeater function

The WiFi Travel Router ensures that existing wireless network coverage will be increased. The EM4600 simply gets connected to your iPad charger and will be adjusted to the repeater function. The WiFi Travel Router increases the coverage of the occupant wireless network. In this way you also have a wireless Internet connection when you are just out of reach of your standard wireless network.

Charging and using at the same time

The iPad charger will keep his charging function. By means of the USB-port at the WiFi Travel Router you can charge and use your iPad during the creation of the WiFi hotspot.

Unique design

The sleek and compact design of the WiFi Travel Router is totally in style with your iPad. When the EM4600 WiFi Travel Router is connected to your iPad charger, it becomes ONE. Because of its compact shape the EM4600 hardly takes any space.
