dentronix® 

American Crafted

American Crafted

dentronix® is committed to homegrown products. We have been building orthodontic pliers in the USA since the late 1960's and are one of the pioneers of inserted-tip design. As inventors of many useful instrument designs, **dentronix**® became a leader in the infection control revolution of the 1980's, designing and developing the most popular sterilizer for orthodontists. Today, we continue our tradition of made-in-the-USA products that are manufactured to meet your needs and exceed your expectations.

Classic (Dry Heat Only)

These are the original-design **dentronix**® pliers that made us a leader in the orthodontic instrument business. Inserted with vanadium cobalt tool steel, these pliers offer the optimum in wear, control, and durability. Three year warranty on manufacturing defects. Lifetime warranty on bond failure. Dry Heat sterilize only.

Royal

Our autoclavable line of pliers feature super-hard non-ferrous inserts that resist wear and corrosion. Lifetime warranty on bond failure and environmental corrosion. Three year warranty against manufacturing defects. One year continuing warranty on reconditioning, sharpening, and reinserting.

NI non-inserted

Our non-inserted line is made from solid surgical stainless steel. These pliers are hardened to optimum levels and offer good wear characteristics and resistance to moisture-related corrosion. Non-inserted pliers have a 90-day warranty against manufacturing defects.

dentronix® recommends dry heat sterilization for all its instrument lines to maintain edge sharpness and joint integrity. "Steam Sterilizable" and "Autoclavable" are references to rust resistant-tip materials only. No other properties or recommendations are inferred.

Comparison of Tip Materials

Properties	Tool Steel	Carbide	Stainless Steel
Hardness	*	*	
Ductility	*		*
Edge Holding	*	*	*
Shock Resistance	*		*
Grip	*		*
Red Hardness	*	*	
Thermal Expansion	*		
Grindability	*		*
Corrosion Resistance		*	*

Box Joint VS. Lap Joint

All **dentronix**® pliers are manufactured from premium USA-made box-jointed plier blanks. Compared to the scissors-style lap joint, this encapsulated design offers tremendous advantages in increased bearing surfaces and contact areas for maintaining tip alignment.

High Gloss VS. Satin Finish

Standard finish on **dentronix**® pliers is high gloss. This highly polished surface provides the best resistance to corrosion, staining, and discoloration. We believe that for a premium plier, it is the only sensible finish. For those who prefer a low gloss satin finish, it can be provided on request at a small additional charge.

Original ShearHold

Classic D200
Royal DE200
.022" x .025" MAX

The original ShearHold leaves only a 1/2 mm protrusion from the buccal tube and is the most effective and reliable design for distal end cutting.

Original ShearHold Mini

Classic D200S
Royal DE200S
.022" x .025" MAX

Our mini-sized ShearHold is perfect for the smaller hand and access in tighter areas; offers time-tested quality and performance.

*dentronix® invented
and patented the
ShearHold safety hold
distal end cutter in 1971.*

Safety Hold Flush Cut V Design

The unique v-design cuts flush and holds the distal end with no springs or other moving parts. Effective from .016" to .018" x .022".

Classic D200V
Royal DE200V

Safety Hold Flush Cut V Design Mini

The mini version of our unique v-design cuts flush and holds the distal end with no springs or other moving parts. Effective from .016" to .018" x .022".

Classic D200SV
Royal DE200SV

Safety Hold Flush Cut Spring Design Mini NiTi ONLY

Spring-design flush cutter is machined specifically for higher cutting velocities of NiTi wires. Use on .010" - .018" archwires. Gold plated handles.

Royal DE200SNT

Safety Hold Flush Cut Spring Design

Classic spring-style flush cutter holds distal ends up to .022 max.

Classic D200F

Non-Hold Flush Cut

A basic no-hold flush distal end-cutter for archwires up to .018" x .022".

**Ligature Cutter
Straight**

The small and versatile mini-version of our standard ligature cutter. Great for smaller hands. Cuts soft materials up to .016"

Classic D201S
Royal DE201S

Straight back; tapered tip for easy access and long life. Diamond honed edges are excellent for all soft materials up to .016"

Classic D201
Royal DE201

**Ligature Cutter
Straight Mini**

Ligature Cutter 15°

Standard-sized ligature cutter with edges angled 15° for improved access to tie wings. Cuts soft materials up to .016"

Classic D201A
Royal DE201A

**Ligature Cutter 15°
Mini**

Mini ligature cutter with 15° angled edges. Small size and taper makes access easy. Cuts soft materials up to .016".

Classic D201SA
Royal DE201SA

**Ligature Cutter
Tapered Mini**

Our mini-lig cutter with a concave taper (similar to D201) provides big plier performance in a small easy-handling package. Cuts soft materials up to .016".

Classic D201ST
Royal DE201ST

Ligature Cutter 45°

45° contra-angle ligature cutter is the ultimate in access to tie wings. Fine tips cut soft materials up to .014".

Classic D212
Royal DE212

**Hard Wire Cutter
Straight**

Ligature-style hard wire cutter has beveled up taper for heavier wires. .022" x .028" max.

Classic D201H
Royal DE201H

Classic D134
Royal DE134

.028" .035"

Serrated Bird Beak

Serrated bird beak plier with perfectly conical round jaw is the ultimate for retainer clasp bending and labial bow loops. Glass-beaded serrations provide excellent grip to minimize wire slippage without nicking. For lab wires up to .030". (for heavier wires see our D134M and D134L)

Bird Beak

.035" .035"

The quintessential bird beak optimized for performance and wear. For tensile wires up to .030".

Classic D139
Royal DE139

Bird Beak with Cutter

.035" .035"

Classic-style bird beak tips with an anvil cutter in the rear of the jaws. For tensile wires up to .030".

Classic D139C

Bird Beak Large Tips

.045" .045"

Slightly longer with larger tips than our standard bird beak pliers. For tensile lab wires up to .032".

Classic D138
Royal DE138

Light Wire Magness

.025"
.020"
.035"

Light wire plier with a rectangular flat-side beak. Originally designed for intermaxillary hook-forming. .020" maximum wire capacity.

Classic D207M
Royal DE207M

Jarabak

.028" .028"

Long jaws, serrated half-round flat beak, and three closing grooves make our Jarabak plier a classic. .020" maximum wire capacity.

Band Slitter

A **dentronix**® patented design for slitting and removing bands. The horned end crimps the band away from the tooth; the cutter cleanly slits it.

Classic D215

“ There is a benefit to dealing with the manufacturer of a product – especially if they are in your global back yard. We’re here not only to provide you with what we believe are the best orthodontic instruments in the world, but also to help you take care of them in a manner that will make them last. Regardless of whose instruments you use, you can use us as a resource to get the most out of your instrument investment. Over the years, **dentronix®** has tested, developed, and supplied products that are the most compatible with your instrument materials. We’re here not only to provide products, but support as well. After partnering with the orthodontic profession since the late 1960’s, we’re still here today because we do it right. ”

The RES Ratcheting Expansion Screw

Revolutionary design prevents back-up. 15 mm width/11 mm expansion. **Use with special safety key!**

The Ratcheting Expansion Screw (RES) was designed to eliminate patient deactivation of the appliance when removing the expansion key. The screw will lock into the advanced position eliminating the possibility of backing up. The screw also “clicks” when activated to give the parent and patient an audible signal the screw has been properly activated. The RES has been on the market for 9 years and continues to grow in popularity. There have been several screws manufactured since the RES to try to mimic the ratcheting mechanism. The RES is the **only** screw on the market that actually locks in place when activated.

Laboratories have had issues with standard screw tolerances being varied and not holding activations. This adds costs to the doctor and laboratory. It also causes great frustration with the parents and patients in dealing with the appliance remake. The RES screw eliminates that scenario due to its locking mechanism. Because the design has a positive locking mechanism, the screw does not have to rely on tight tolerances to prevent it from backing up. This enables the RES screw to have lower tolerances which give it some flexibility when seating the appliance.

It is important to use the specially designed safety key when activating the RES screw. The key is designated with a hole in the blue handle to differentiate it from standard safety keys. **Other activation keys will damage the holding clip.**

The screw can be used in the upper and lower arches for expansion. Due to the screw's design it is comfortable in each arch. The screw will feel more like a TPA than a expansion screw to most patients. The screw's small design does not affect the speech and swallow patterns like most expansion screws.

The RES has an activation dot so positioning is easily identified. The screw has 11 millimeters of expansion capability with 44 activations.

The new **LED3000™** from **dentronix®**

The LED 3000™ provides PAC-like power in an affordable and reliable LED (Light Emitting Diode) design. Validated at 3000 mW/cm² in 3K mode, this light optimizes all of your light curing procedures. It is particularly effective for indirect bonding techniques. Where lower power is indicated, the LED 3000™ has a Standard Mode with output of 1600 mW/cm².

Light weight and perfect balance make the **LED3000™** easy to handle.

Precision-machined from aircraft-grade aluminum, the LED 3000™ handle combines optimum durability with extremely light weight. At only 4.4 oz., the LED 3000™ doesn't get heavy when performing long bonding procedures. Plus, the lightweight 8 mm optical glass turbo tip is easily removable for sterilization.

Time is money and the **LED3000™** can save you big!

The 3K mode offers cure settings of 1 second, two seconds, and three seconds, PLUS an automatic **Ortho Mode** (OM). OM is programmed for 32 consecutive 3-second exposures, with a one second "OFF" interval accompanied by an audible signal. This allows for easy, uninterrupted mesio-distal navigation around the entire arch. Just press the shot button whenever your bonding sequence is done and the Ortho Mode resets. When compared to the 20-second curing times of standard lights, the LED 3000™ can save almost 8 hours of chair time per every 100 patients. That's an ROI that is awesome!

Serviced by **dentronix®**.

Field replaceable battery.

Ortho mode cures brackets in 3-seconds per side.

Stores in tabletop charger so it's always ready to go.

LED 3000™ Kit includes light handle with rechargeable battery, 8 mm turbo tip, charger base, power cord, barrier sleeves, ortho light shield, tip light shields, battery replacement screwdriver, and user manual.

60013947

SCT Orange Light Curing Glasses

Special lenses absorb >99.9% UVA and UVB rays plus 100% of blue, green and violet light up to 540nm wavelength. Features include wrap-around uni-lens design, molded-in nosebridge, sideshields and browguard, adjustable temple lengths, ratcheting lens inclination and simple lens replacement. They fit great and look awesome! Made in the USA.

Serrated Bird Beak

Serrated bird beak plier with perfectly conical round is the ultimate for retainer clasp bending and labial bow loops. Glass-beaded serrations provide excellent grip to minimize wire slippage without nicking. For wires up to .030".

Classic D134

Tips Measure: ● — ■ —
.028" .035"

Tips Measure: ● — ■ —

Hawley Retainer Plier

Affectionately called the "Magic Plier" by many, the D238 contours the arch, bends the labial bow loop, and fine tunes to the anatomy with the fine tip. Bends wires up to .032".

Classic D238

Three Prong Medium Tips

Solid stainless adjusting plier for all lab applications. Wire up to .036".

NI D344

Three Prong Fine Tips

Solid stainless adjusting plier for all lighter wires up to .030".

NI D344T

Large Bird Beak Medium Tips

Tips Measure: ● — ■ —
.032" .040"

Manufactured on our large forgings, these pliers provide the extra bulk and grip for lab functionality for wires up to .036".

Classic D134M

Large Bird Beak Large Tips

Tips Measure: ● — ■ —
.045" .055"

Manufactured on our large forgings, these pliers provide the extra bulk and grip for lab functionality for wires up to .056".

Classic D134L

Young Plier

The traditional Young design for wire bending. Barrel diameters of 2mm, 3mm, and 4mm plus two sets of closing grooves. Wire up to .045".

NI D3144

An essential instrument set for forming, bending, and cutting facebows. D282 plier automatically forms the inner bow bayonet bend, and the tip provides the grip for re-bending the outer bow loop. The D281 compound action cutter provides the power needed for cutting the inner or outer bow.

Facebow Plier Set

.070" MAX

Compound Action Cutter

D177
.051" MAX

Compound action lab cutting plier makes cutting heavier wires easy.

Bernard Plier 6-1/2"

D40B

Compound action gives mechanical advantage for enhanced grip. Parallel opening jaws with hardened cutter. Large size.

Bernard Plier 5-1/2"

D40A

Compound action gives mechanical advantage for enhanced grip. Parallel opening jaws with hardened cutter. Medium size.

Heavy Three Prong

The dentronix version of the Aderer-style heavy three prong. Bends up to .072".

NI D344F

Standard Adams Plier

A lab standard, the Adams plier features two 1mm square beaks and a parallel opening at .040" for effective bending of clasps. Bends up to .030".

Classic D135

Large Adams Plier

A heavy-handed 21st century version of the classic Adams plier has rectangular beaks and a closing groove. For wires up to .051".

Classic D135L

Cephalometric Protractor

DCP-1

A basic tool for those in the analog world of imaging. Millimeter scale and precision protractor for angular and linear measurements.

Cool Wax

Orthodontic relief wax is a great patient giveaway for relief of pain and irritation due to appliances. Sanitary, high quality Hygenic® wax is packaged in a super-cool clamshell pack. Box of 50.

DWB6

Used in many teaching institutions worldwide to simulate results of specific bracket prescriptions and treatment plans. Wax forms are "pre-loaded" with various occlusions. Place brackets and wires and put in a hot water bath to see where teeth move.

Precision-machined aluminum frame offers vertical and horizontal adjustment of the occlusion.

Typodont Training Aid

5 different occlusions available.

DT2 Complete upper and lower arch.

Mixing Spatula

DSP1

Unbreakable rigid nylon spatula is contoured for our mixing bowls. Easy clean. 7-1/2" long.

dentronix® helps make your instrument handling process simple and efficient with products designed to work together to safeguard your investment, your staff, and your patients. All products are specified to be consistent with federal guidelines to afford you the highest measure of compliance.

Simple Tips for Effective Infection Control

The basic function of an infection control procedure in an environment that is essentially non-sterile is to effectively break the chain of cross-contamination and cross-infection.

A sterilization area must be set up in a manner that segregates the clean side from the dirty side. When bringing dirty instruments into the sterilization area, be aware that a line exists between the dirty and clean side and crossing it is the source of potential cross-contamination.

Pre-rinsing instruments prior to ultrasonic cleaning can significantly reduce infectious biological populations and minimize the bio-burden in your ultrasonic machine. After rinsing, place immediately in the ultrasonic filled with a non-ionic, non-enzymatic, chemically neutral cleaning solution with an effective rust inhibitor like our MPUS-Plus.

Always keep the lid on your tank when cleaning to avoid aerosols generated by ultrasonic cavitation from spreading to your clean side. Do not use compressed air to dry instruments that have not been sterilized.

Our MPUS-Plus solution is a no-rinse solution. After allowing the instruments to drip dry, place in the sterilizer. If you must rinse after removing from the ultrasonic, use a secondary dip in clean MPUS-Plus to leave a film of rust inhibitor. If you steam autoclave, always use an instrument milk dip prior to packaging your instruments.

Do not load dripping wet instruments into your dry heat sterilizer. The added humidity can cause corrosion and staining plus negatively impact sterilizer electronic and mechanical components.

Lubricate your instruments weekly to avoid joint stiffening. If using dry heat, use a pure silicone lubricant as petroleum-based products will carbonize and cause joint tightening. Food grade lubricants like our DSL-16 are most desirable from a toxicity standpoint.

Follow the instructions provided by your sterilizer manufacturer for proper loading and cycle times. Your sterilizer was biologically validated using specific loading and cycle parameters. If you don't follow them, your unit may not function correctly.

Instruments sterilized without bags must be stored in a manner that prevents environmental contamination. Instruments processed via steam in bags must go through the entire drying cycle or they are to be treated as unbagged instruments.

Be very conscious of the clean side and the dirty side of your infection control process and be aware of simple items that you touch like pens, computer keyboards, the mouse, or even the sterilizer door latch that can connect the last patient you saw with the next one. Pathogens don't have feet or wings. They need someone to move them around the office.

Monitor your sterilizer on a regular basis using spore strips to make sure it is performing to spec. Dry heat sterilizers are very sensitive to proper loading of the biological indicator, so follow the manufacturers' instructions.

Before you change any product or process that has worked in the past, call your instrument or sterilizer provider to make sure the new change is compatible.

DDS7000 Orthodontic Dry Heat Sterilizer

FDA 510(k) cleared as a medical sterilization device.
Completely inert process does not damage hinged instruments, sharp edges,
or non-stainless components.

Sterilizing temperature of 375°F (191°C).
Cool down cycle allows immediate handling after sterilization.
Complete cool-to-cool cycle in under 40 minutes.
Large load capacity.
Plier loading racks included in FREE accessory kit.

Capacity
36 pliers

Weight
90 lbs

(31.7cm x 22.8cm x 15.2cm)

115 V DDS7000115
230 V DDS7000230

Cannot be used with bags or cassettes.

Sterilize

For orthodontic applications, dry heat is the preferred method.

"Heat-tolerant dental instruments usually are sterilized by 1) steam under pressure (autoclaving), 2) dry heat, or 3) unsaturated chemical vapor. All sterilization should be performed by using medical sterilization equipment cleared by FDA. The sterilization times, temperatures, and other operating parameters recommended by the manufacturer of the equipment used, as well as instructions for correct use of containers, wraps, and chemical or biological indicators, should always be followed."

CDC Guidelines

Accessory Kit D7107-01

Includes 2 D7000C Racks, 2 D7000 Silver Racks,
1 Spore Strip Holder, 8 oz bottle of MPUS-Plus,
Sample Barrier Bag, 1 DSY-20 Silicone Lubricant

Vent Adaptors

DAD-UL

Universal - mounts to exhaust stack

Uses standard 4" dryer venting.

DAD-BL

Straight Back - mounts to sterilizer

Vertical Plier Rack 9 Instruments

D7000-Silver

Vertical Plier Rack Mini

D7000M-S

Standard Combo Rack

Clean Instruments
by hand or with ultrasonic cleaner.

MPUS-Plus Ultrasonic Cleaning Solution

The only solution formulated for Dry Heat.
Keeps instruments safe and corrosion free.
Non-ionic, non-enzymatic, chemically neutral
with a superior rust inhibitor.

MPUS-Plus Ultrasonic Cleaning Solution is specifically formulated for DryHeat processing. It does not require rinsing prior to loading in the sterilizer and evaporates cleanly with virtually no residue or odor. An effective rust inhibitor protects your instruments. Concentrated solution dilutes 1/2 oz. per gallon of tap water. Carton of four 8-oz bottles makes 64 gallons of use-strength solution.

Sterilizer Monitoring

"Biological indicators (BIs) (i.e., spore tests) are the most accepted method for monitoring the sterilization process because they assess it directly by killing known highly resistant microorganisms, rather than merely testing the physical and chemical conditions necessary for sterilization..."

Correct functioning of sterilization cycles should be verified for each sterilizer by the periodic use (at least weekly) of BIs."

CDC Guidelines

Passport® Postage Paid Mailer 2 Strips Plus Control

This test features a postage paid mailer to send to the lab, two dual-organism strips per test, and a control strip. Lab results are returned to your office whether positive or negative. Available in either 12-test or 52-test packages

DPS012

DPS052

EMS Self Mailer 1 Strip Plus Control

This is a single dual-organism strip test with a control strip. You pay the postage and only get a report when there is a positive growth result. Available in either 12-test or 52-test packages.

DEMS012

DEMS052

SporView® In Office Culturing

In-office BI system can be used with steam or dry heat. Aseptically transfer the strip from the sterilizer to the media and culture for 7 days at target temperature for your sterilizer. Turbidity and color change in media indicate failure. 20 strips and vials.

DCS020

Dual Organism Strips

Different types of sterilizers are challenged by different types of organisms. Our spore strips include both *G. stearothermophilus* for steam and chemical vapor sterilizers and *B. atrophaeus* for dry heat. Incubate at 37°C for dry heat and 56°C for steam. If your office has both types of sterilizers you can use the same strip with two different incubators. Easy!

In House Spore Strip Starter Kit

Everything you need to start spore testing your sterilizer in your office. Includes 20 dual-organism tests, a record notebook, culture media, media stand and incubator. Order SporView refills above.

37° Starter Kit (Dry Heat)

DSK037

56° Starter Kit (Steam)

DSK056

Dry Heat Spore Strip Holder

Assures that each spore strip is exposed to the same conditions as your instruments. Essential for minimizing false positives and negatives in a convection dry heat system.

TERMS & CONDITIONS

100% CUSTOMER SATISFACTION

Dentronix offers a full line of fine instruments and equipment for the orthodontic profession. Known for our quality and service, Dentronix stands behind every product with our 100% customer satisfaction guarantee.

Returns & Credit

Returns must be received within 30 days of invoice in re- stockable condition for full credit. Custom or modified manufactured products cannot be returned for credit or exchange. Please make sure to insure all pack- ages being returned to Cerum Ortho Organizers for full value. **After 30 days a 20% restocking fee is applied to all product returns that can be resold as new.**

Repairs

Dentronix will ensure sharpening and/or reinsertion at a reasonable charge. Repair services are provided on Dentronix manufactured instruments only. All other instruments will be returned to the customer. **Inserted plier repairs are warranted for one year. Non-inserted instrument repairs are warranted for 90 days. Allow 90 days (plus shipping time) for repairs. Pliers must be sterilized before they are sent in for repair. All packages must be signed for at Cerum Ortho Organizers for you to have proof of Delivery.**

Please send your insured package to:
