Introduction to Basespace

Basespace is an innovative website design, hosting and content management system supported by a thriving community of developers and designers who deliver outstanding web presences to their customers. With the Basespace content manager, you or your staff can look after your new business website, reducing ongoing costs. Say goodbye to spiraling website designer fees.

Getting Started:

To get started, the first thing you need to do is visit our website at: www.basespace.eu

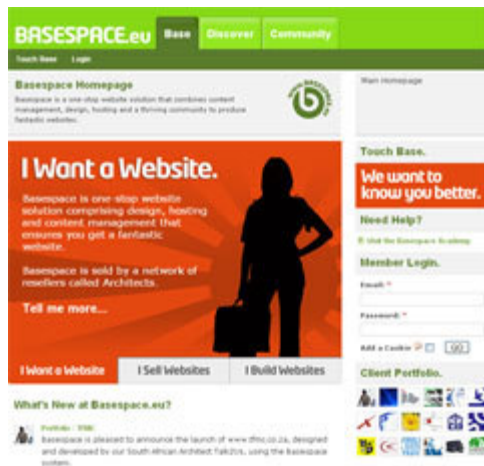

Figure 1: The basespace Home Page

Login to Basespace:

In order to start editing your website, you need to login to the Basespace Control Panel.

You will see the 'Member Login' (shown below) on the right hand side of the page or 'Login' on the top left hand side of the page. It asks you to enter an 'Email' address and a 'Password'. You require a valid login email and password to enter into the system, if you do not have one, contact us. To avoid having to rewrite your email address every time you login, click the box next to 'Add a Cookie'. Once you have entered your details, click on the 'Go' button shown below. If you would like to read the Basespace Privacy Policy click on the small red and blue speech bubble next to 'Add a Cookie'.

Member Login.

Add a Cookie 

Figure 2: Control Panel Login

Base:

After you have logged into the Basespace Content Management System, you will be in 'Base'. The light green navigation bar shown below, will take you back to the Basespace website without logging you out. Click on 'Base' to view the options below in the dark green navigation bar. This secondary navigation bar has a number of options that will take you to different pages. They are listed below:

Figure 3: Primary and Secondary Navigation Bar

CMS

This is the home page of the Basespace Content Management System. Here your content manager gives you full control of your website entries so you can add, edit, move, hide and delete entries. The first page of the CMS you will see shows you ten of the most recently updated pages in your website.

Profile

As a registered user you can use this space to introduce yourself to other Community members and select options to personalise certain Basespace features.

Costs

This page lists all the present and forthcoming coming costs attributed to your website.

Touch Base

If you need Basespace support you can send us a message using the form on this page to get in touch as soon as possible.

Logout

If you click on 'Logout', you will automatically be logged out of the Basespace Content Management System and will return to the Basespace Home page. If you would like to carry on editing your website, you will have to login again.

Basespace Content Management System

This is the heart of the Basespace system, and is where most of the magic happens! Here you will make changes to your site, add pages to it and control what your audience sees.

CMS (Content Managing System)

When you click on 'CMS' you will automatically be shown a page called 'Recent'. Other options are available on either side of this button. These are called the 'CMS Controls' and are discussed below:

Figure 4: CMS Controls

'Recent'

This shows you ten of the most recently updated pages in your website, with the date it was last updated. It also gives you the option to edit, view, delete, publish and unpublish these pages.

'Order'

When you click on 'Order' you can see all your website pages and how they are connected. Dates of when all your pages were last updated will be shown along with the options to edit, view, change the order of, delete, publish and unpublish these pages.

'A to Z'

'A to Z' allows you to view pages in alphabetical order which can make it easier to find pages if you have a large website. It shows the dates of when each page was last updated and also gives you the option to edit, view, delete, publish and unpublish these pages.

'Junk'

Items that have been deleted are shown here. The date that they were sent to 'Junk' is shown, along with the options to edit, view and permanently delete these pages.

'Site'

When you click on 'Site', a preview of you website is shown with the CMS Controls on the page. We refer to this as the Website Preview Mode. These tools allow you to open the 'CMS', logout, edit the content, add a new page or entry, unpublish and change the order of your pages.

'Stats'

'Stats' is currently a work in progress, we are designing it to show your website's traffic statistics.

'Add'

This adds a new Site Page to your website. You have the option of adding a 'standard' page, a 'connected' page or an 'embedded' item to your website.

'Move'

You can move a Site Page by clicking 'Move'.

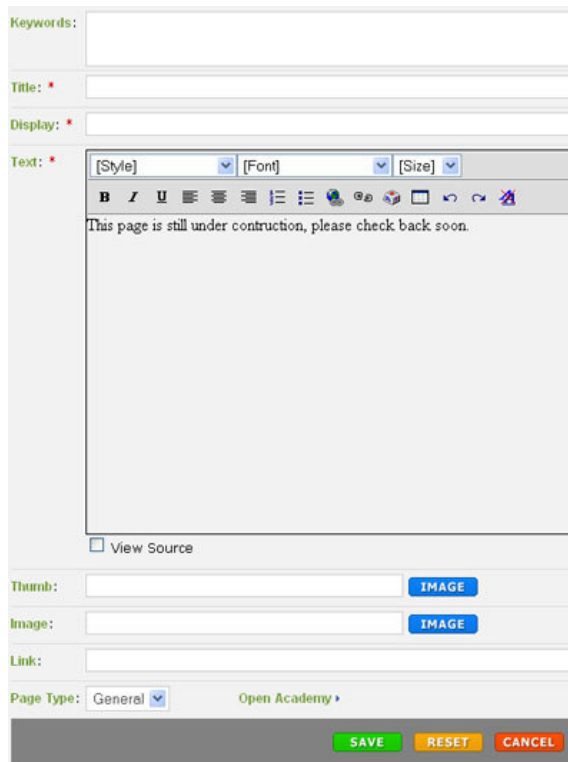

How to edit a page

There are four buttons which form the CMS Controls and provide the easiest way to edit a page in your website. These buttons are: 'Recent', 'Order', 'A to Z' and 'Site'. Each of these areas has a unique way of presenting the pages in your website. 'Recent' shows the latest ten changes you have made to website pages. When you click on 'Order' you can see all your pages and how they are connected. 'A to Z' allows you to view pages in alphabetical order which can make it easier to find pages if you have a large website. Clicking on 'Site' shows you a preview of your website and above each entry is a set of CMS Controls with the button 'Edit' (shown below). We will discuss this view in more detail later.

Figure 5: Website preview CMS Controls

The image below is called the Page Editor. This is what will be shown on your screen once you have clicked on the page name you want to edit in either 'Recent', 'Order' and 'A to Z'. If you click on the blue 'EDIT' button in the Website preview mode you will also be presented with the Page Editor.

The Page Editor interface includes the following fields and controls:

- Keywords:** Text input field.
- Title:** Text input field with a red asterisk.
- Display:** Text input field with a red asterisk.
- Text:** Rich text editor with dropdown menus for [Style], [Font], and [Size]. The toolbar includes icons for bold, italic, underline, bulleted list, numbered list, link, unlink, image, and undo. The text area contains the message: "This page is still under construction, please check back soon."
- View Source
- Thumb:** Text input field with an IMAGE button.
- Image:** Text input field with an IMAGE button.
- Link:** Text input field.
- Page Type:** Dropdown menu set to "General" with a link to "Open Academy".
- Buttons:** SAVE (green), RESET (orange), and CANCEL (red).

Figure 6: Page Editor

Now we will explore the fields in the Page Editor:

'Keywords'

As part of an advanced search engine optimisation technique, each page can be optimised for a specific set of keywords. The keywords entered here will override the default keyword set used for the whole website (this default keyword set was entered when the site was launched).

'Title'

The title of the page is written in this field and is shown as the heading for each standard page, connected page and embedded item.

'Display'

The text entered into this field will be displayed in your website as a button, so it should refer to the text in the 'Title' field above it, but because it is displayed in a button, the text should be kept reasonably short. 'Display' in a standard page would be a button on the Primary Navigation Bar, for example: 'Home' or 'Contact Us'. 'Display' in a connected page would be a button on the top right hand side of the page, taking you to a connected page of that standard page. 'Display' in an embedded item does not show up because embedded items do not have buttons though it is still advisable that text is entered into the 'Display' field for embedded items.

'Text'

This is where the body of your text is written. The formatting bar gives you the ability to change your text, the options available are:

- 'Style' allows you to change the style of how your text appears, for example: paragraphing, headings etc. It is not advisable that you change the default style, it is an advanced feature that could cause problems with formatting.
- 'Font' changes the look of the writing.
- 'Size' changes the size of the writing.
- '**B**' makes the text bold.
- '*I*' makes the text italic.
- 'U' underlines the text.
- 'Paragraphing Align Left' means that text is paragraphed to the left of the page.
- 'Paragraphing Centre' moves the text to the centre of the page.
- 'Paragraphing Align Right' aligns the text on the right hand side of the page.

- 'Ordered List' lists text in a numerical order.
- 'Unordered List' provides bullet points for a list that has no specific order.
- 'Insert Link' allows you to insert a link into your text.
- 'Remove Link' removes a link from your text.
- 'Insert Special Characters' allows you to insert special characters that are not on the keyboard.
- 'Spell Check' checks the spelling of the text in the body of the Page Editor.
- 'Undo' this takes a step backward and undoes your last input.
- 'Redo' redoes the last input, in other words it is a step forward from the 'Undo'.
- 'Remove Formatting' removes any formatting in the text.

'Thumb'

See section 3 The Image Library.

'Image'

See section 3 The Image Library.

'Link'

Insert a link to an external website here. This operates in a different way to the link tool mentioned above, in that it inserts a stylised link – that is formatted behind the scenes in keeping with the website style. Be sure to use the correct format, for example:
<http://www.google.co.uk>

'Page Type'

This is an advanced feature, but an understanding is necessary in order to create great looking websites! A further explanation of each page type is available later in this document, in the section titled 'Page Types'. An important concept to grasp is that of 'Page Type Cascading'. This is a simple concept: If you label a page a certain Type, for example Gallery, it will influence the style of all other pages that are connected under or to it and handle them as Gallery entries. This is called 'Page Type Cascading'. The Page types available are listed below:

- General
- Section
- Gallery

- Links
- Article
- Embedded

'Open Academy'

This is an important part of the site that will be expanding greatly in the future. Here you can find this user manual in HTML or PDF formats, some common questions we get asked and articles that discuss Basespace and various web and design topics.

How to restore older versions of pages

If you are editing an already existing page, on the right hand side of the Page Editor there is a section called 'Saved backups'. Under this heading there are buttons representing earlier versions of the page you are working on. The amount of these vary for each page, depending on how many times you have edited the page. The image below shows us that if we click on one of the dates, it will restore the older version of the current page. If you are adding a new page, 'Saved backups' will not be present on the side of the Page Editor.

Saved backups.

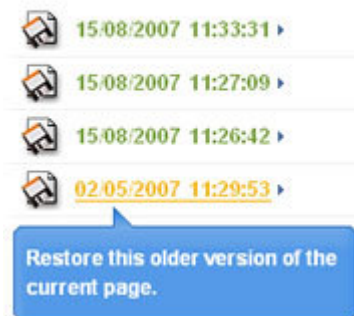

Figure 7: Saved backups

How to add a page

To add a new page to your website, click on the button 'Add' which is located on the left hand side of the CMS Controls. Once you have clicked on 'Add', the page below will be shown. Here you can choose one of three ways to add a page.

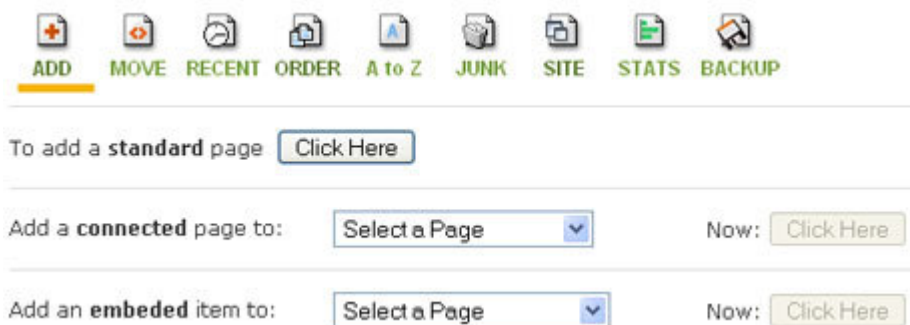

Figure 8: Adding a new Site Page or item

Three ways to add an entry to the website

- A 'standard' page
 - A standard page is a top level page. When previewing your website, a standard page is represented by a button on the primary navigation bar.
- A 'connected' page
 - A page that is connected to a standard page. It is a sub-section and you can have connected pages under standard pages, up to three levels deep. When previewing your website, connected pages can be accessed by buttons in the sub-navigation. Connected pages can be influenced by 'Page Type Cascading' as mentioned earlier.
- An 'embedded' item
 - Embedded items can only be added to an existing page, they don't have their own buttons like the two above. Many embedded items can be added to either a standard or a connected page. Adding an embedded item provides you with the means to have more than one heading, image and paragraph on a page.

How to view a page in your website

You can preview a page in your website by previewing the whole website, detailed earlier, or by simply clicking the little icon below. This icon is found opposite every page in 'Recent', 'Order' and 'A to Z' in the CMS Controls

Figure 9: View a page in your site

How to delete a page

If you would like to remove a page from your website, you can move it into the junk folder by pressing the junk button (shown below). It is found opposite every page in 'Recent', 'Order' and 'A to Z' in the CMS Controls. If you are previewing your website and you are looking at an unpublished page, a yellow block above the Web preview will also contain the 'Junk' button. Click on 'Junk' and then click 'OK' if you would like to delete the page you are viewing. If you are sure that you do not need the page you are removing, it is stored in 'Junk', one of the CMS

Controls (shown in figure 4). You can permanently delete a page entering the Junk CMS Control and clicking the red X button next to it.

Figure 10: Move a page to the Junk folder

The Image Library

Figure 11: Image Library

The image library helps you to upload and manage the images that you choose to use on your website. When uploading images to your website, Basespace offers the flexibility of using its own image uploading, sizing and compression tool, or you may elect to use the images ‘as is’ although this is an advanced function requiring knowledge of image editing tools like Photoshop or Paint Shop Pro. We describe how both methods can be used in the section titled ‘Using the Image Library’. A few important points to remember when adding images to your website:

Image Quality

Try to keep the images of a high quality. Visiting sites like www.fotolia.co.uk will allow you to browse and purchase images from a library of millions. Fotolia is recommended by Basespace as it has the most reasonable cost (as little as 0.57p per image) and is easy to use.

Image Dimensions and Optimisation

Always use a standard pixel size for your images and always compress them, striking a balance between quality and data size. If you choose to edit the images yourself and upload them as is, we recommend using an image editor like Corel Paint Shop Pro or Adobe Photoshop.

We also recommend strongly that image width remains uniform, however if required you can have varying heights to your images but this detracts from the neatness of the site. Follow the picture heights and widths that have been created for you or do a little experimentation. There are typically 4 different image dimensions and data sizes in a standard Basespace Foundation site:

- Thumbnail 80w x 80h pixels. Data size less than 10 kilobytes.
- Body image 260w x ? pixels. Data size less than 40 kilobytes
- Pop up Gallery image 600w x ? pixels. Data size less than 80 kilobytes
- Header image 800w x 100-150h pixels. Data size less than 80 kilobytes.

Image Names

The Image library has a few features that help you find the image you want. One of these is alphabetical listing of the images that you have uploaded. By labeling each image with a prefix such as t_ (for thumbnail) or b_ (for body) you will make them much easier to find by type. Always use an underscore instead of spaces when naming an image, as this helps compatibility with browsers.

Using the Image Uploader

New to Basespace is our very own image selection and compression tool. To get started with the new tool, click on the button 'IMAGE' which is opposite the field 'Image' or 'Thumb' (shown below in figure 13). This will open your Image Library in the right hand panel and start the process. If you don't have any images in your library yet, no images will be listed.

- **Uploading a new image:** Click 'Upload a New File', this will bring up instructions on how to add a new file as seen in Figure 12.
 - Step 1: Click the 'Browse...' button.
 - Step 2: After clicking 'Browse...' you will be presented with a familiar 'Open File' Windows dialogue. Locate the image you would like to insert into your page. Click 'Open' or double click the name of the image. This enters the filename and path of the image in the box to the left of the 'Browse...' button.
 - Step 3: Click 'Upload Image'. The image will open in the Selection Window.

- Step 4: As described earlier – if you have already worked your images up in a tool like Photoshop or Paint Shop Pro click the 'Full Size' button to use the image as is. If you have not optimized your image already and you would like to use the Basespace selection tool then please continue with this step. Use the red selection box to choose the *area* of the image you want to display. To resize the selection box, so as to only choose a part of your image, use your mouse to drag the sides up, down, left or right or drag the corners to move the selection box diagonally. Click the centre of the box to move it anywhere on the image. The image uploading tool will automatically resize the image for you to either thumbnail or main website image sizes.
- Step 5: If you would like to upload the image as is then click the 'Full Size' button. If you have finished selecting the preferred area of your image click 'OK' to upload it.
- Step 6: Finish by clicking the green button 'Close file upload' and then find your image in the Library which is highlighted in green, making it easier to find. Click on it and then Save the page you're working on.
- **Previewing an image:** If you would like to preview the image in the library, before adding it to the page, then click on the 'Preview image in new window' button <> which is on the left hand side of the file names.
- **Deleting an image:** If you would like to delete a file in the Image Library, click on the red X button on the right hand side of the file names.
- **Closing the image library:** If you would like to close the Image Library so that it is not visible, click on 'Close File Library' button.

Close file upload

How to add a new file:

1. Click the 'Browse' button.
2. Find the file on your computer, select it and click 'Open'.
3. Click the 'Upload Image' button.

4. Use the selection box to choose the area of the image you want. Resize it by dragging the corners.
5. Click 'OK' to finish and upload the image, or 'Full size' to upload the complete image
6. Finish by clicking 'Close file upload' above and then find your image in the Library, highlighted in green.

Figure 12: The image uploading tool.

Cancel **Full Size** **OK**

Upload Image

4. Use the selection box to choose the area of the image you want. Resize it by dragging the corners.
5. Click 'OK' to finish and upload the image, or 'Full size' to upload the complete image
6. Finish by clicking 'Close file upload' above and then find your image in the Library, highlighted in green.

Figure 12.1: Choosing an area of the image using the image tool.

How to add an image to a page

Click on the button labeled 'IMAGE' which is opposite the field 'Image'. This will open the Image Library in the right hand panel. The names of your images will appear in the list, highlighted in green under 'Your files:'. Click on the image name to add the image to your page.

Remember that the little photograph icons allow you to preview the image if required. Once the image is added to the page editor and the page is saved, you will be able to see the image in the website preview.

Thumb:

Image:

IMAGE

Open your image library in the right hand panel.

Figure 13: Adding a new image

How to add a thumbnail to a page

Click on the button labeled 'IMAGE' which is opposite the field 'Thumb'. This will open the Image Library in the right hand panel. If you don't have any images in your library yet, no images will be shown. Remember that the little photograph icons allow you to preview the image if required. Click on the image name to add the image to your page. Once the image is added to the page editor and the page is saved, you will be able to see the image in the website preview.

The Publishing and Moderation system

Publishing a page means that when you visit your website as a normal or public web user the page is visible. If a page is not published, the normal or public web user will not see it. However, as the webmaster of your website, unpublished pages are always shown to you once you have logged in and viewing the site in Web Preview mode. A page can be published, unpublished or held for moderation. This system is a simple but effective way to control what is seen by your web site viewers and when.

Basespace has been designed to prevent newly created pages or embedded items from going live immediately; thereby giving you the opportunity to check that the page has been laid out correctly and that grammar and spelling mistakes can be corrected. This is called Moderation, and utilises the publish/unpublish mechanism. You can also manually unpublish a page if required. A scenario where this is very useful is if a seasonal special offer has expired. Simply unpublish the page and wait until the special offer is current again – to re-publish it. The advantage of being able to unpublish pages is that you need not lose what work you have done when you want to remove the page from your site.

Publishing or Unpublishing a Page

- Manually changing a page's published status: There are various ways to publish a page. The simplest is via the little red or white page icon adjacent to each page entry in the CMS. Visit either 'Recent', 'Order' or 'A to Z' and then click on the white Unpublish page button or the red Publish page button which is opposite the name of the page you are working with.
- Changing a page's published status from the website preview mode: If you are previewing your website and a page is unpublished (indicated by [square] brackets around the pages link/button) a yellow area above the website entry titled 'Requires Moderation' will have 'Publish or Junk' buttons in it. Click on 'Publish' and then click 'OK' if you would like to publish the page you are viewing.

Figure 14: The Published status icon

Figure 15: The Unpublished status icon

The Website Preview CMS Controls

Figure 16: Website Preview CMS Controls

Editing your website using this method is slower, however it can help you to make changes to your website more easily as you become accustomed to managing your website with Basespace. The Website Preview CMS controls above are visible when you preview your website. There is a set of these Website Preview CMS Controls above each entry in your website so that you can edit each of them individually.

How to use the Website Preview CMS Controls

'Edit'

If you click on 'Edit', you will be taken straight to the Page Editor where you can edit the page you were previewing in your website.

'Order'

When you click on 'Order' you are taken to the CMS Control Panel and can see all your pages and how they are connected. Dates of when all your pages were last updated will be shown along with more options to edit, view, change the order of, delete, publish and unpublish these pages.

'New'

This button takes you to the Add Page Options (shown in figure 8) where you can add a new Site Page to your website. You have the option of adding a 'standard' page, a 'connected' page or an 'embedded' item to an existing page.

'CMS'

This button takes you to the starting page of the Basespace CMS called 'Recent'. Here you can see ten of the most recently updated pages in your website, with the dates they were last updated. It also gives you the option to edit, view, delete, publish and unpublish these pages. The other CMS Controls are also available here (shown in figure 4).

'Logout'

If you click on 'Logout', you will automatically be logged out of the Basespace Content Management System and will return to the Basespace Home page. If you would like to carry on editing your website, you will have to login again.

Cascading Page Types

Figure 17: Page Type

One of the most important concepts to grasp when working with a Basespace website is that of ‘Cascading Page Types’. Each page type has a set of rules operating in the background that change the way they display in the site structure *and crucially* the way pages connected to them behave – in other words, the page type cascades to the pages below it (to read more about connecting a page read the section titled ‘How to add a page’ on page 14). By using different page types you can get the most from your website and make it a really interesting place to visit, so experiment with different combinations!

The page type can be changed in the Page Editor under the field ‘Page Type’ (shown above). Here is a brief description and a screenshot of each page type:

‘General’

A ‘General’ page contains a body of text along with one body image. The General page is the most basic building block in the Basespace Foundation system. You can create a General page at the top level of your website, or you can connect it to any other type of page (except Embedded). You can also insert as many Embedded entries as you like into a General page, although we advise keeping pages to a reasonable length.

NORMAN & NICHOLAS

Home Projects Construction About Us Contact

Norman and Nicholas Construction in Ely Construction

Construction

Carpentry

Site Search

Search all the pages of this site.

Site Search

Norman & Nicholas offer a comprehensive construction service ranging from small alterations to large build projects. We have a fairly unique approach – personable and approachable, we work with our customers as partners. This guarantees we listen first, to understand the dream and what is required to turn it to reality. Then we use our wealth of construction knowledge and our qualified staff to deliver work of the highest quality.

- ▶ New Build
- ▶ Design
- ▶ Barn Conversions
- ▶ Extensions
- ▶ Office and Warehouse Refurbishment

All household and commercial maintenance work is undertaken including: repairs to windows, brickwork pointing, fascia and soffit. We are also proud to offer a tenancy life maintenance contract, which has proved popular in the cases of rented commercial properties.

Norman and Nicholas will also carry out insurance work in as short a timescale as possible. We understand the difficulty and upset unforeseen circumstances cause. Rapid damage assessment and preparing of quotation will mean that there are no delays in applying for an insurance claim.

Figure 18: Example of a General Page, with another General page as a sub-page ('Carpentry').

Homepage

The Homepage page type is locked into the system to ensure that your website has at least one page, and can only be added at the top level of your website. It typically matches the characteristics of the page Type 'General', in that it has a body of text and one body image.

Figure 19: Example of a Homepage with one Article type sub-page ('News') and one Sitemap type sub-page ('Sitemap').

Section

This page type can be a top level page or it can be connected to any other type of page except an embedded entry. A Section page is useful if you intend creating an area of your site with sub-sections connecting to it. Like all the other page types, you start with a body of text and a body image. For example, the image below shows a 'Projects' page with each project as a sub-section eg. 'New build home, Pymoor'. The benefit of a Section page is that each sub-section is introduced with a thumbnail and teaser in the main body, and in the secondary navigation menu on the right. You can connect any other type of page to a Section, except Homepage and Embedded items. This can lead to some interesting and useful combinations. In the example below, we have created a Section type page, with Gallery type pages linking to it, as it was the best way to show off each project.

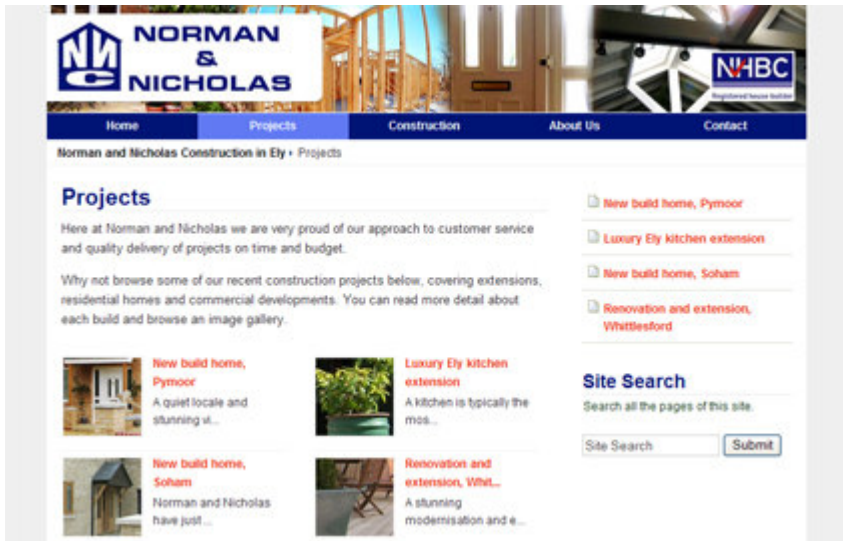

Figure 20: Example of a Section page with Gallery type sub-pages.

Gallery

This page type can be a top level page or it can be connected to any other type of page except an embedded entry. It is used when you wish to create a gallery of images, which are shown as thumbnails with a short description. On click, the thumbnail links you to a larger pop up image. See 'Image Dimensions and Optimisation' under 'The Image Library' on page 16 to optimize and your images correctly. You will start by creating a body of text and inserting a body image if required, as in the example below. Then the pages that you connect to your Gallery page, will automatically be of page type embedded (as this is what the Gallery must use) and will display as a thumbnail, description and pop up image.

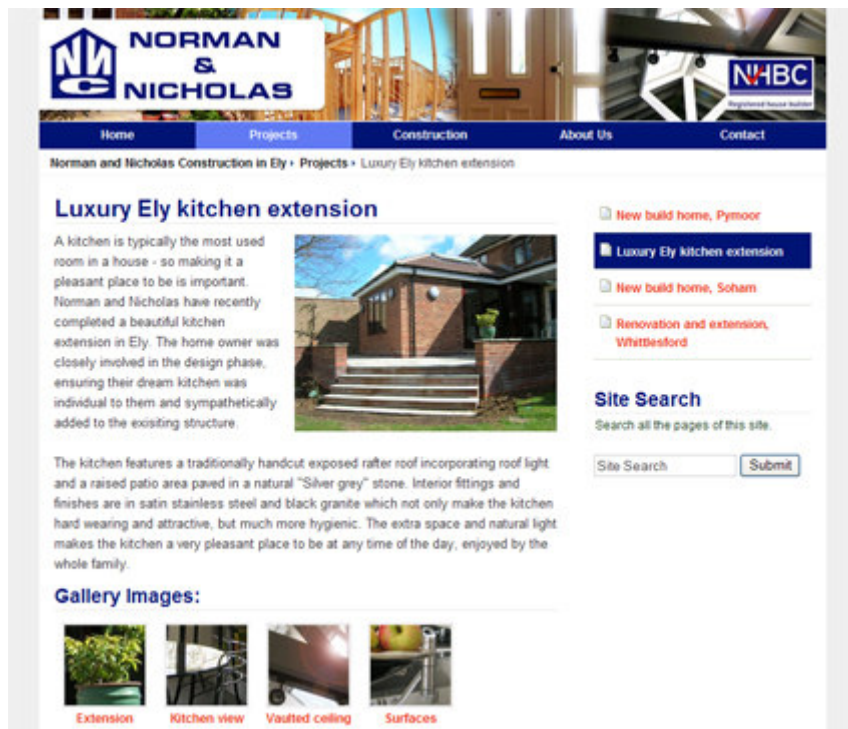

Figure 21: A Gallery Page, with four embedded entries linking to it, producing the thumbnails, descriptions and body images.

Figure 22: The pop up gallery image with on screen controls.

Links

A Links type page can be a top level page or it can be connected to any other type of page, except an embedded item. Like all the other page types, you start with a body of text and a body image and your offsite links (other websites) are displayed as thumbnails and a stylized teaser. You will need to enter the full website address in the 'Title' field and a description in the 'Info' field' to complete the entry. See the example below:

Figure 23: A Links Page, with an offsite link to www.toolsandmaterials.co.uk

Article

This page is used for news articles, blogs, or other bodies of text that you wish to create a list of over time. You will start with the option to enter a body of text and body image like other page types. We only recommend that 'General' pages are connected to 'Article' pages. As can be seen in the example below the first and latest news article is given pride of place with a thumbnail, teaser and 'read' link. The next two latest news stories are given a thumbnail and teaser each. Thereafter the news stories are shown as single line links. All the pages connected to the Article page are also shown as links on the second level navigation on the right. This layout allows for a good depth of content in the area of the site and presents it very effectively.

Figure 24: An Article Page

Embedded

An embedded entry can only be connected to an existing page, but it can be connected to any type of page. If you cast your mind back, you will recall that Homepage, General, Section and Article pages only allow for one title, body of text and body image. This may seem limiting – but is easily solved with the Embedded page type. This page type gives you the opportunity to add another title, body of text and body image to these page types, as many times as you like. See the example below.

The exceptions to the rule is in the case of a Gallery page and Links page. The Embedded page type will create a new Gallery image and in the case of the Links page the Embedded page type will create a new offsite link entry.

New build and design

Norman and Nicholas develop new houses, building in the region of six per year. We are a registered NHBC (National House Builder Council) Developer offering full cover. Our architect travels to the proposed site, carries out a survey and discusses with the customer what they wish to achieve.

An indication of budget is sought at this stage to help Norman and Nicholas to work within expectations. We then cover design, planning application and building regulation compliance. After these steps have been completed we begin costing the project in line with the budget. When the customer has signed off the proposal, the construction commences.

Commercial premises new build and refurbishment

We can carry out these services with both traditional or steel frame builds.

Norman and Nicholas offer a steel construction design service through an experienced designer who has worked on some major commercial projects.

Barn conversions and extensions

All barn conversions are undertaken; whether brick built, timber frame or clunch. A service we are proud to offer is development of joinery in softwood or

Cart

The Cart page type is actually the gateway to our online shopping system Expansion that allows you to sell and take credit card orders via your Basespace website! The Cart Expansion will allow you to manage your products for sale in sections, upload pictures, postage and prices and take orders by credit card online. The Cart Expansion is an optional extra to Basespace and we will cover its use in another manual.

Contact

A Contact page type lists all of your contact detail and presents a contact form to your visitors. By filling in their details, they can quickly and easily get in touch with you via email. The details in the form are filled in by the Basespace team, so they are fixed. Simply email us via the Support Centre in your control panel to make any changes to these details.

The screenshot shows the contact page for Norman & Nicholas. The header features the company logo and navigation links: Home, Projects, Construction, About Us, and Contact. Below the header, the page title is "Norman and Nicholas Construction in Ely - Contact". The main content area is divided into two columns. The left column contains a contact form with the following fields: "Full Name:" (required), "Email:" (required), "Phone Number:", and "Comments:" (required). A "Send Message" button is located below the form. A note at the bottom of the form states: "Note: Fields marked with a * are required." The right column contains "Contact Details" for the Norman and Nicholas Team, including the company name, address (Unit 11, Cheltenham Business Park, Lynn Road, Ely, Cambridgeshire, CB6 1RY), and phone number (01353 669400). Below the contact details is a "Site Search" section with a search box and a "Submit" button.

Site Map

This page type is very useful for a number of reasons. Firstly, it allows visitors to quickly see the whole of your websites pages in a logical structure. Secondly it allow search engine crawlers (automated software systems used by search engine companies to read websites) to easily find every single page on your website and index them effectively. Finally, the Sitemap page will also allow your visitors to subscribe to an RSS feed of your website. RSS (standing for Really Simple Syndication) is a new way of providing your visitors with a constant link to your websites content, so that they can see changes as they happen to your website. Browser software like Internet Explorer provides an option to use an RSS feed as an ‘enhanced’ favourites list, that alerts your visitors when a change is made to your site – without them even needing to visit your site.

If this sounds too technical – then put simply it is the way forward for users to subscribe to information they want to see in this information rich world!

It is common to find the ‘site map’ page connected to the homepage of a website.
