3. IntesisHome[®] device description

Figure 1.- IntesisHome® Device

4. IntesisHome[®] device connection procedure

Before starting the set up process, make sure that the Air-Conditioning unit (AC) is connected to the power supply line and IntesisHome[®] LED is steady green.

There are two connection modes available: with WPS and without WPS.

NOTE: Check your Access Point (AP) user's manual to find (if available) the WPS button or WPS activation procedure

4.1 Connection with WPS

This method assumes that your Access Point (AP) supports WPS connection mode.

1.- Press IntesisHome[®] device button

(IntesisHome® device LED starts blinking blue)

2.- Activate your AP WPS mode. IntesisHome® device LED will change blinking color

If connection has been successful, IntesisHome[®] LED will blink up to one minute and then it will turn off. It not, please check LED status table and/or visit <u>www.intesishome.com/support</u>.

4.2 Connection without WPS

This method assumes that your AP does not support WPS connection mode and that you have a Wi-Fi compatible device (laptop, mobile phone, tablet, etc.)

- 1.- Connect your Wi-Fi device to the IntesisHome[®] Wi-Fi network (Network that starts with Intesishome)
- 2.- Open the web browser of your Wi-Fi device and write any URL (IntesisHome[®] welcome site will open)

3.- Select your AP from the list of available APs

If the desired AP is not showed press the

by clicking on select button.

(In this example APWifi)

browser Refresh button.

IntesisHome* Scanning for networks ... This may take up to 45 seconds
