## Belts, Accessories

### Hearing Protection Belt Clip

The simplest and most practical way to carry your ear defenders when they are not on your ears!

Double-Alpha Academy's new ear defender belt clips are constructed of fibre reinforced polymer and are strong and durable. You would have to apply considerable force to break one!. The belt loop is wide enough to accommodate any width shooting belt and the flexible hanger loop is multi purpose and will work great with any equipment you choose to hang on it.

Available in Red, Blue or Black.

Order No.	Price	Colour
HP117	\$10.00	Black
HP118	\$10.00	Blue
HP119	\$10.00	Red

## Belts, CR Speed

### CR Speed Hi Torque Belt

One of the firmest, toughest belt around. Super reinforced Nylon outer. Supplied with non snag Velcro Inner.

- Proven Performance "Rigid & Durable"
- Supplied with both Inner & Outer Belt.
- Shooter Friendly velcro system.

The CR Speed Hi-Torque range belt provides a Firm & Stable base for all your equipment Including Holsters & Mag Pouches. The belt is supplied with both inner & outer belt.

### Important Belt Size Ordering Information

The belts are the specified waist size - length & have an additional 23cm ( 9") overlap.

Example 1: if you have a 97cm (38") waist you can order the 97cm (38") size belt & will have 23cm (9") overlap. The overall length of a Eg: 38" - 97" Belt is actually 46.5" - 118cm long. So sufficient overlap has already been included.

Example 2: If your waist size is slightly larger than Eg: 97cm (38"). or if you want/require additional overlap, you may want to order a size 102cm (40") belt "this has an actual overall length of 124cm (49)".

The pre calculated overlap applies across the range of CR Speed belt sizes.

## Belts, Double Alpha Academy

### DAA PRO Belt

Compared to the DAA Competition Belt, this belt is a higher quality belt, which is less rigid, narrower and thinner. A big bonus with this belt is that you can now insert your contact details into the name tag holder and clearly identify your rig as your own.

The DAA PRO Belt incorporates the following features:

- Clear Name Tag Holder
- Dual-tone webbing on the outer belt
- DAA Logo text on the Inner Belt
- Rubberised DAA Logo Security Loop

Comes with:

- Inner Belt
- Outer Belt
- Security Loop with DAA Logo

## Belts, Double Alpha Academy

### DAA PRO Belt (continued)

#### Inner Belt

The inner belt has a slim profile to allow it to be worn closer to your body as comfortable as possible. It is pointed at one end to allow easy insertion in to belt loops on your clothing and has an outer Velcro layer which not only affixes it to the outer belt but also prevents it snagging on car seats or other clothing when worn separately.

#### Outer Belt

The belt has a fibre reinforced polymer core covered in a tough web nylon outer. This is what gives it the exceptional stiffness as well as being slightly thicker than most belts.

This belt being slightly thicker than most belts does make it a little harder to thread holsters and pouches. The belt was designed this way to ensure gear attached to the belt will sit firmly in place and not rock or slide about (all types of gear will still fit).

#### Important - How to Select the correct belt size

1. **Measure Your Waist** - Do not rely on your pant size. Measure your waist where your belt will go and make a note of it.
2. **Add Overlap length** - We recommend an overlap of between 18-25cm (smaller sizes add 18cm, larger sizes add 25cm).
3. **Overall Length** - Add your measured waist size to the required overlap and then select the Overall Length.

The Inner Belt and Security Loop can also be purchased separately if you require replacements.

#### DAA Competition Belt and the DAA PRO Belt, what's the functional difference?

The DAA Competition Belt is very stiff and this is probably the most important feature of an IPSC Belt. Having a stable platform for both your holster and your magazine pouches etc is essential.

The two aspects of having a very stiff belt is that it doesn't follow the contours of your body and can leave gaps (this is especially true for smaller waist sizes).

Secondly to achieve this stiffness DAA made the belt slightly thicker and slightly wider than most of IPSC belts. This means fitting other manufacturer's gear which is required to be threaded onto the belt quite difficult (although achievable).

The DAA PRO Belt is slightly thinner and narrower than the DAA Competition Belt and is more attuned to the dimensions of other manufacturer's IPSC 1.5" belts. This makes threading on other manufacturer's gear much easier and the belt more comfortable to wear.

The DAA PRO Belt is still a stiff belt and is just a little bit stiffer than the CR Speed High Torque Belt.

#### Summary

If you want an exceptionally stiff belt for high performance in competition (particularly when on the move) then the DAA Competition Belt is the way to go.

If you want a sleeker more comfortable belt and/or looking at using non DAA Holsters & Magazine Pouches then the DAA PRO Belt may well be the way to go.

## Belts, Double Alpha Academy

### DAA Competition Belt Security Loop

In case you have lost your original belt loop, or just need another one for some other belt or application, now you can buy extra belt loops as needed.

They are made of the strongest nylon materials, and beautifully embroidered with the DAA logo. Top quality Velcro ensures long lasting performance.

Can be used on DAA belts, or any other "inner outer" belt system.

\$6<sup>75</sup>

## Belts, Double Alpha Academy

### Double Alpha Velcro Inner Belt

In response to popular demand, we are pleased to now offer the DAA Competition Inner belt only, as a "stand alone" product.

An extra new inner belt is often a handy thing to have. Many like to use them as regular belts, especially when travelling by air, as they do not "beep" in the x-ray machines.

This inner belt is identical to that supplying when purchasing a full inner/outer DAA Competition belt system.

#### Available in Black only.

How to select the correct belt size:

Most pant manufacturers today "cheat" with their marked size. A size 36" pant should measure around the waist 91.5cm but most measure more. So before you order your DAA belt, take a tape measure and measure around your waist. Then check the chart of belt lengths shown above and select a belt which offers you about 18-25cm overlap. (longer than your measured waist size)

For example:

If you measure around your waist 86cm, you should choose a belt which is about 104-110cm Overall length, which would mean a DAA belt size 34". If you measure around your waist 98cm, you should choose a belt which is about 115-123cm Overall length, which would mean a DAA belt size 36 or 38"(38" would be the safer bet, a little long is always better than a little short).

Order No.	Price	Belt Size
BT154	\$25.00	85cm - 34"
BT155	\$25.00	92cm - 36"
BT153	\$25.00	81cm - 32"
BT156	\$25.00	97cm - 38"
BT157	\$25.00	102cm - 40"
BT158	\$25.00	105cm - 42"
BT159	\$25.00	112cm - 44"
BT160	\$25.00	115cm - 46"
BT161	\$25.00	120cm - 48"
BT162	\$25.00	125cm - 50"

## Belts, Guga Ribas

### Guga Ribas Competition Belt

In a competition, attention to detail is extremely important and the GR Belt was designed with this in mind.

The Belt has an inner **light steel structure lined in nylon** and is less bulky and more comfortable than other belts.

This structure withstands the weight of the pistol, magazines and accessories to guarantee stability when drawing the gun and assuring the best possible performance.

One of the unique features of this belt is the retained security loop which is threaded over the inner belt and securely holds both the inner belt and out belt together. No more losing the security loop as it now stays in place on the inner belt!

The Belt Kit comprises of:

- Outer Belt
- Inner Belt
- Security Loop

#### Important - How to Select the correct belt size

1. **Measure Your Waist** - Do not rely on your pant size. Measure your waist where your belt will go and make a note of it.
2. **Add Overlap length** - We recomend an overlap of between 18-25cm (smaller sizes add 18cm, larger sizes add 25cm).
3. **Overall Length** - Add your measured waist size to the required overlap and then select the Overall Length.

### Books

#### Competition Handgun Training Drills. - Mike Seeklander

Competition Handgun Training Drills contains the drills (and only the drills) found in the "Your Competition Handgun Training Program" Book. These drills are designed to teach the shooter the critical skills necessary to excel in practical shooting. It is meant to be used as a range guide for those that do not want to print the drills, or by shooters that want to use the drills to design their own program. The full training program is recommended for those wishing to really excel.

**Pages: 101**

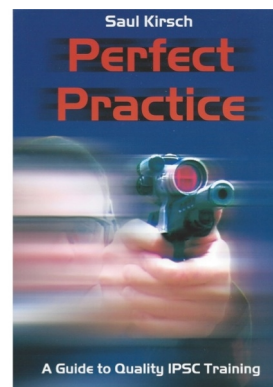

**\$18<sup>75</sup>**

### Books

#### Perfect Practice - Saul Kirsch

Perfect Practice is Saul Kirsch's first book and the ideal guide to quality IPSC training.

Created from Saul's own personal practice know-how, over 50 carefully crafted practice drills ensure you acquire all the knowledge, tips and skills necessary to excel.

Topics include:

- Accuracy and recoil control
- Calling your shots
- Improving your draw
- Reloads
- Shooting position transitions
- Barricades
- Shooting on the move
- Swingers,

and more.

Each topic contains detailed insights into the attitudes and techniques critical to success. Each drill is explained in depth - how to shoot, what you learn and how to keep track of your progress and learning curve.

**Pages: 150**

**\$39<sup>95</sup>**

## Books

### Practical Shooting, Beyond Fundamentals - Brian Enos

Practical Shooting includes in-depth coverage of the technical and mental aspects of training and competing, plus detailed information on the guns and gear used in Practical Shooting competition.

Pages: 201

\$35<sup>95</sup>

### Principles of Performance - Steve Anderson

Principles of Performance is the logical continuation of Steve's first book, Refinement and Repetition. It follows Steve's progression from a shooter who was driven to be Ohio's first USPSA Grand Master to a shooter who wanted better, more consistent match performance.

The new book places a heavy emphasis on match consistency and the mental qualities required for solid USPSA (United States Practical Shooting Association) match performance. It is designed to take a good shooter with sound fundamentals and basic skills to a place where he can better utilise those basic skills in the world of high-stress competition.

## Books

### Principles of Performance - Steve Anderson (continued)

There are drills designed specifically to improve field course skills, as well as drills designed to isolate the challenges a shooter begins to see at larger matches.

Principles of Performance also covers the common mistakes seen at every USPSA match, as well as their solutions. Most shooters will recognise themselves in the "Common Mistake" portion of the book, thereby gaining the means to identify a simple solution to every problem.

Also featured is Steve's interview with Lanny Bassham, on the topic of creating a winning self image in the arena of national competition. He interviewed Lanny for over an hour and transcribed the entire conversation.

He also details his first two experiences on National Championship "Super Squads," which give the reader a good idea of what it's like to be squadded with the best shooters in the sport.

In his first book, Refinement and Repetition, Steve helped the shooter achieve the goal of higher class placement based on improving fundamental skills. In Principles of Performance, Steve shows you how to take those skills and put them to work by improving match placement.

### Books

#### Refinement & Repetition - Steve Anderson

Refinement and Repetition is an 21.5cm x 28cm (8 1/2 x 11), spiral-bound book made up of 38 dry fire drills, including the exact drills used to achieve the rank of Grand Master in one year after buying my first Open Gun. I am obviously a huge believer in the power of dry fire practice to make all of the skills required to fire a pistol accurately at high speed truly subconsciously controlled. When the basic gun handling skills are subconsciously controlled you are no longer drawing, aiming, pulling the trigger and firing the gun. You are simply shooting.

This book exists because I set a goal. I wanted to be a GM. It became an obsession for me after I watched Blake Miguez do some high speed hosing on a Matt Burkett DVD. I had never seen or even contemplated shooting a gun that fast, but I knew I could do it with practice. Because both my parents were music teachers, I fully understood the power of practice and had already experienced it first hand as a guitar player. As a teenager I spent hours playing scales and finger exercises on an unplugged electric guitar to build finger strength, speed and coordination, so the idea of dry fire made perfect sense to me.

I analysed the USPSA classifiers and realised that most of them involved shooting six rounds, reloading, and then shooting six more rounds and various target arrays. From there it was simple to devise drills to address those challenges. These became the first 12 drills in Refinement and Repetition. The others came after a similar analysis of the skills that are needed in common USPSA stages.

It's important to remember that I never set out to write a dry fire book. I set out to make GM. The book got produced because I got tired of giving away the drills for free.

Trust me, it works. If you want to get really good, really quick, there's no better way.

Steve Anderson

#### Thinking Practical Shooting - Saul Kirsch

In this, his second book, Saul shares with his readers 20 years of competition experience and know-how. His unique background, first as an Olympic rifle shooter and then as a Practical shooting competitor, gives him a profound understanding of the key elements required to excel under the pressure of competition.

Topics include:

- The basic elements of IPSC
- Accuracy and recoil control
- Understanding IPSC scoring
- The mental process of performance
- The champion's attitude
- Visualisation techniques
- Mental games played
- Goal setting and training programs
- The shooting diary
- Match preparation
- Physical training for IPSC
- Match day nutrition
- Preparing your gear for competition
- Stage Tactics and match tactics

Each topic contains detailed insights into the attitudes and techniques critical to success. Each drill is explained in depth - how to shoot, what you learn and how to keep track of your progress and learning curve.

#### CE Pro Chrono Digital - Bluetooth Adaptor

Wireless connection for your CE Pro Chrono Digital!

The Digital Link from Competition Electronics takes velocity measurement to a new level.

Now you can add our Bluetooth module to your Pro Chrono Digital for a wireless connection to mobile devices. (not compatible with all devices, see below for details) Requires (3)AAA batteries (alkaline recommended) for operation.

#### Here are some key features:

- Works with Android and newer Apple devices (iPad4 or newer and iPhone4s or newer)
- FREE app is available for download from devices App Store (Android "Play Store" and Apple "App Store")
- Control your chronograph with a phone or tablet
- Collect, view and export data wirelessly from up to 50 feet (15.24 metres) away
- Statistics and weather data
- Small unit mounts to the chronograph and connects to the data port
- Power and connect status LEDs

#### Contents:

- Digital Link Bluetooth Module with Velcro Mount Strap
- Rubber Bump Pads for CE Pro Chrono Digital Chronograph
- Manual

**\$105<sup>00</sup>**

### Chronographs, Competition Electronics

#### CE Pro Chrono Digital Chronograph

**PROCHRONO DIGITAL™**

#### Official Chronograph of the NRA Bianchi Cup and Single Action Shooting Society

Accurate velocity measurement for rifles, pistols, arrows and shotguns. Easy to set-up and use with a HUGE shooting area.

#### Features

- Store 9 shot strings with up to 99 shots each in power down memory.
- Review each velocity and shot string data which includes average velocity, standard deviation, and extreme spread.
- Delete an individual shot or entire string with the touch of a button.
- Connect to the data port for remote capability with optional accessories (USB Connector).
- Customize your system with optional accessories. Only pay for the features you need.
- Quality Electronics, years of refinement yield a sensing design that is compatible with a wide variety of loads and light conditions.

#### Specifications

- Velocity Range: 21-7,000 feet per second
- Temperature Range: 32-100 degrees Fahrenheit
- Size: 16 x 4 x 3-1/4 inches
- Battery Required: One 9-volt alkaline battery (not included)
- Mounting Hole Thread: 1/4 x 20
- Guide Wire Size: 3/16 x 16 inches
- Memory Capacity: Up to 9 strings of up to 99 shots each
- Minimum Time Between Shots: Between 250 mSec and 500 mSec
- Shot Timing Resolution: 750 nSec Crystal Controlled
- Accuracy: +/-1% of measured velocity, or better
- Current Consumption: Approx. 15mA

## Chronographs, Competition Electronics

### CE Pro Chrono Digital Chronograph (continued)

User Manual

\$185<sup>00</sup>

### CE Pro Chrono Digital USB

This accessory provides you with everything needed to connect the Pro Chrono Digital chronograph to a computer and expand it's functionality with the included software program. Now a PC can be used to operate the chronograph as well as collect and manage the data it provides. It has many useful applications both at home or on the range. It is compatible with all Pro Chrono Digital Chronographs.

#### Computer Information

The Digital USB interface software program has been tested and functions acceptably under the following Operating Systems:

- Windows 98
- Windows 2000
- Windows XP
- Windows Vista
- Windows 7
- Windows 8

#### System Resources

- A typical monitor and keyboard.
- A mouse is recommended but not required.
- One or more USB ports.

#### Features

- Use Multiple Chronographs with One PC - This is useful if two chronographs are being used to measure the same projectile in order to validate the results.

## Chronographs, Competition Electronics

### CE Pro Chrono Digital USB (continued)

- Last Velocity Large Display - Create a large size display of the velocity readout and the power factor on your computer screen. The size is adjustable to suit the desired viewing distance. Great for showing the results to a group of onlookers.
- Multi-Function Control Panel - Control all of the chrono functions, read a list of velocities from each shot string and the associated statistics, and print a report. You can also input information for calculating the ammo. power factor and foot/lbs.
- Export Data - Send information to your spreadsheet program in several file formats.
- On Screen Graph Of Velocity Strings - Create a graph using data from a shot string. Save or print it for later reference.
- USB Port Connection - Uses the computer USB port for a wired connection to the Pro Chrono Digital.

#### Contents

- USB Adapter Interface
- 7.62 m Connection Cable
- Program CD

## Chronographs, Competitive Edge Dynamics

### CED M2 Chronograph

CED proudly introduces the new CED M2 Chronograph System. Building on the original CED Millennium Chronograph, which has been an industry

## Store

### Chronographs, Competitive Edge Dynamics

#### CED M2 Chronograph (continued)

standard for the past eight years, the new CED M2 Chronograph begins where its predecessor leaves off.

New advanced technology enabled us to DOUBLE the operating speed of the CED M2 chronograph incorporating a micro-controller that runs at 48 MHz while expanding the operation range from 50 fps to 7,000 fps.. Memory storage has been expanded 500% from 220 velocities to over 1,000 stored velocities. Stored string size can range from a single velocity up to 500 velocities and up to 500 different strings. Expanded digital chip design now gives the CED M2 the ability of reading velocities at much lower light levels. On clear days, this means the ability to chronograph from early morning till almost sunset.

A new keypad has been designed in calculator-style layout. In fact, we have added a built-in calculator as well. Further, the CED M2 now includes a "Hi-Average" function which provides "one touch" calculation of the average of the three highest velocities in a string. This new function is ideal for calculating Power Factor at IPSC & IDPA matches. With the new built-in calculator, the results are easy and fast! In addition, the CED M2 Chronograph adds even more new features like Single function string removal, 2 ft. mounting bracket for ALL uses, the ability to recall specific strings from memory or to remove specific strings from memory, and a new USB interface. Now it is easier than ever to connect your chronograph to your PC and download your saved data into the newly designed and updated CED Data Collector software program.

The CED M2 Chronograph goes far beyond the competition with advanced custom features including:

- Sleek, lightweight, and compact design
- Advanced software & digital circuitry = extremely fast performance!
- Over 1000 shot capacity with up to 500 string permanent memory
- Records velocities from 50 fps to 7,000 fps
- High, Low, Average, & Hi-Average velocity readings
- Extreme Spread & Standard Deviation
- Edit & Omit functions
- Built-in Calculator
- IPSC / IDPA Power Factor computation Function
- New Data Collector Software program included
- Meter or feet recording
- 10X Mode – records slower velocities in decimeters
- Voice Chip technology – Results can be heard as well as seen
- On / Off control, with no-memory loss "Auto-Shut Down" mode
- PC Downloads - USB interface for fast, software downloads of stored data
- New Data Collector Software program included
- Low battery warning indicator
- Back-up battery storage
- 9-Volt battery operation (included)
- Operating Temperature range (0c to +50c)

The largest custom LCD display in the industry providing all relative information at a single glance.

Full function custom display

### Chronographs, Competitive Edge Dynamics

#### CED M2 Chronograph (continued)

- Current Velocity
- No. of shots recorded in string
- Screen setting distance in feet or meter measurement
- Low Battery Warning
- Current function in use
- Error warning indicator

Custom Key pad - No toggling required with "easy to read" format and moisture resistant display.

- One piece rubber key pad display
- Easy to read function format

Dual Lens Skyscreen Sensors, Diffuser Screens, and 2 ft. foldable (tripod threaded) Mounting Bracket included!

- Heavy duty 5 inch wide Screens
- Large shooting area
- Custom dual lens design with built-in pressure plate adjustment
- 6m (20 ft.) Shielded cable

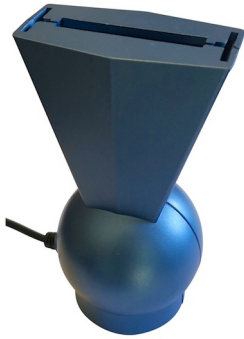

**\$295<sup>00</sup>**

### Chronographs, Competitive Edge Dynamics

#### CED M2 Chronograph - Sensor

The CED M2 Sensor is the same sensor that comes standard with the CED M2 Chronograph.

It is 40% more light sensitive than the original Millennium sensor and allows operation of the chronograph in lower light conditions.

The M2 sensor has been designed specifically for the CED M2 Chronograph, however it can be used as a replacement for the CED Millennium Chronograph sensor.

**Please note: This sensor should not be mixed with the older Millennium sensor. Therefore if you are using it as a replacement on the CED Millennium Chronograph then you need to replace both sensors with the type.**

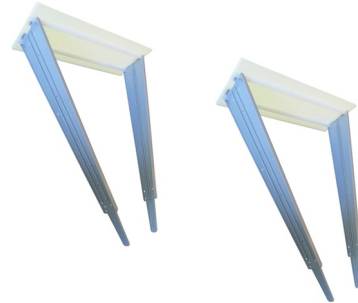

\$58<sup>50</sup>

### Chronographs, Competitive Edge Dynamics

#### CED M2 Chronograph - Sky Screen Set

This Sky Screen Set fits both the CED Millennium Chronograph and the newer CED M2 Chronograph.

Set includes:

- Two top sky screens
- Four sidearms

\$41<sup>00</sup>

#### CED M2 Chronograph Carry Case

For easy carry and protection of the CED Millennium Chronograph system and accessories.

Includes quick release padded shoulder strap and adjustable carry straps for attaching a tripod.

\$59<sup>00</sup>

## Store

### *Chronographs, Competitive Edge Dynamics*

#### CED M2 Chronograph Infrared Kit

With incredible accuracy, the Patented Infrared Screen Set eliminates the need for sunlight when using the CED Millennium Chronograph system, and gives you the freedom to record velocities under any lighting condition, or if you choose, no light at all! Connects to the standard sensors that come with the basic system, and uses its own AC power source or optional NiMH battery pack. The Infrared Screen Set includes Infrared Screens, side-arms, AC Adapter, and instructions

Note: If you need to use these screens away from a power outlet you will need to purchase the NiMH Rechargeable Battery Pack.

**\$159<sup>00</sup>**

### *Chronographs, Competitive Edge Dynamics*

#### CED M2 Chronograph Infrared Screen Set - Rechargeable Battery Pack

The CED M2 Chronograph Infrared Screen Set comes with an AC adaptor which is great if you use your Chronograph near a power outlet, however if you need to operate the screens independently then this battery pack is essential.

This CED NiMH Rechargeable Battery Pack provides up to 8 hours of continuous use and the "no-memory" Battery Pack can be recharged 500 to 1,000 times.

Comes with complete Battery Pack, AC Charger, and connection cables. Instructions included.

**\$79<sup>00</sup>**

## Chronographs, Tripods

### CED-SL36 Tripod

The new CED-SL36 is a medium weight Chronograph tripod, designed for normal chronographing use with pistol or rimfire rifles.

3-section, 30mm diameter aluminium construction, measuring 62cm (24.5") folded and opening up to a maximum 170cm (67") usage height.

This solid constructed tripod features a 3-way & removable pan-head with camera threaded connector, 2 levelling adjustments, a deluxe zippered carry case, and weighs almost 1.7kg (4 lbs.).

A centre gravity hook allows additional weight to be added for increased stability in use. An economical alternative to the CED1555 Professional Tripod, the CED-SL36 is value packed for its price!

Featuring two levelling adjustments, a removable pan-head, carry handle, and centre gravity stabiliser hook, the CED-SL36 Chronograph Tripod is ideally suited for most medium weight shooting conditions.

- **This product does not qualify for the Flat Rate Shipping Cost due to the relatively low cost, large size.**
- **Shipping on this product is \$20 per and shipping is via normal parcel post.**
- **If you add additional items to your cart and select "Express Post" those additional items ONLY will be shipped via Express Post not this product.**
- **This only applies to orders shipped within Australia as shipping for domestic customers is based on volume and weight whereas shipping for International orders is based on weight alone.**

\$57<sup>95</sup>

## Chronographs, Tripods

### CED1555 Heavy Duty Professional Tripod

Weighing over 4 kgs. (9 lbs.), the CED1555 Professional Tripod is a true heavyweight! 3-section round aluminum tube frame, with an extension range from 52.5 - 155.5cm (21.75" to 61.25") and 71cm (28") folded, this is one of the best professional tripods we have ever tested.

3-way & removable panhead, with leveling function, and all metal construction, make this tripod the right choice for use in chronographing full bore magnum loads.

An excellent value at half the price of comparable brands, the CED1555 Professional Tripod is the one you need!

Heavy-duty & professional design, with 3-way function and removable panhead, all metal construction, levelling feature, and a deluxe carry case with zippered pocket and padded shoulder strap.

**This product does not qualify for the Flat Rate Shipping Cost due to the relatively low cost, large size.**

### Clothing

#### CED Knee Guards

Competitive shooting often requires fast manoeuvring on stages of fire where dropping to one's knees, bending under low fixtures, or going prone may be required.

Protection of the knee area is vital in preventing injuries. CED and Double-Alpha Academy have teamed up in designing a protective yet very functional product for the competitive shooter today. The CED Knee Pad Set consists of two knee pads made with two layers of foam padding assembled into three sections, which in turn allow flexible movement while providing a custom tapered fit.

The CED Knee Pads can be worn over pants with easy attachment. No need to pull them over the shoes. The two adjustable straps attach quickly and easily around the leg using Velcro straps. Easy on /easy off!

**\$35<sup>00</sup>**

### Clothing

#### DAA Elbow Pads

Designed by Double Alpha Academy specifically for IPSC competitors when going prone, these elbow pads are lightweight and durable.

The padding is comprised of small EVA foam disks, which are held tightly together to give you seamless protection whilst providing full flexibility and comfort of wear.

The sleeves are machine washable and made of 90% Polyester and 10% Spandex, with silicon piping incorporated around the top and bottom edges to ensure they do not move either up or down during movement.

#### Set consists of:

- Two DAA Elbow Pads (Pads are ambidextrous).

#### Sizing

M - L, if you normally wear a Medium or Large Top

XL - XXL, if you wear a XL / XXL or larger Top.

Order No.	Price	DAA Elbow Pad Size
CL135	\$29.50	M - L
CL136	\$29.50	XL - XXL

## Clothing

### DAA Shooting Team Arm Sleeve

The DAA Shooting Team Arm Sleeve protects you from the elements and has a silicone lining to keep the sleeve from sliding down your arm.

The sleeve has a silicone lining so it stays put, and with them weighing next to nothing it does the job without interfering with your shooting.

Order No.	Price	DAA Arm Sleeve
CL110	\$18.50	S

## Clothing

### DAA SHOTAC Shooting Vest

Designed from scratch the DAA SHOTAC Shooting Vest keeps you warm during cold weather without interfering with your draw, reloading and moving.

It has a matt black textured soft-shell outer finish, water repellent, yet breathable, non bulky and comfortable to wear even for long periods.

#### Features:

- Medium thickness thermal insulation provides warm without creaking bulkiness.
- Wide and deep arm cutouts assure wearing is comfortable when in the arm-extended double-grip shooting stance.
- Wide elastic side panels create a snug fit around the midsection, preventing interference while drawing the gun or reloading.
- 4 wide elastic Velcro straps allow you to connect the vest to your inner belt, to keep it from riding up.
- Cut short, to end just above your belt, thus avoiding interference with your shooting gear.
- 2 front cargo pocket, plus 2 zippered chest pockets, provide ample storage.
- 3 frontal horizontal webbings create connection points for hanging a timer, radio or other small gear.
- Rain hat folded into neck collar.
- Frontal chest transparent card/name holder, and Velcro patch attachment tabs.
- Rubberised SHOTAC and DAA logos on chest and back of neck.

#### Sizing:

The Vest is designed to be a snug fit. Double Alpha have stated that it will fit competitors with average to slightly heavy builds, but might be too tight with those with very large midsections.

For most customers ordering the same size as their shirt/jacket should be OK.

For US customers order one size larger than their shirt/jacket is recommended.

DAA Master Class I DVD - Saul Kirsch

In Master Class 1, you join Saul Kirsch as he coaches a group of eight shooters in Årjäng, Sweden. This DVD was filmed during the actual full day of coaching.

Saul covers many of the most important basic technical skills required to excel in the sport of Practical Shooting. Topics covered include accuracy in pistol shooting, recoil control, the "high-ready" position and gun presentations, drawing from the holster, specialty draws and turns, reloading, and the first steps to shooting while exiting a position. In addition, Saul explains the basics of IPSC scoring and understanding the hit factor and point system.

Each topic is presented clearly with detailed explanations by Saul, and then followed by some dry-fire and live fire drills. You can even strap on your rig and dry-fire along with the class, if you like, but make sure your gun and magazines are unloaded! Edited into the explanations are some brief scenes of top shooters in action at the 2007 USPSA Open and L10 Nationals.

**Running time: 180 Minutes.**

#### DAA Mastering the Mental Game DVD - Saul Kirsch

In this presentation, Saul explains some of the more difficult, critical aspects of the mental side of Practical Pistol Shooting. In his friendly and easily understood style, he brings clarity to complex topics, such as:

##### **The Mental Process of Peak Performance**

In this section Saul analyses the basic thought process that governs our every action and is essential to achieving success under pressure; how the Conscious, Subconscious and Self-Image interact with one another to influence the outcome of our match performance. Saul explains how each element can be improved and developed to achieve a better competition result.

##### **Managing Match Stress**

As someone who has experienced match stress first hand, Saul teaches how to meet the pressure head on and triumph over your fears and doubts. He shares some proven techniques which will allow you to lower or raise your stress level, as needed, to keep you in your "zone of peak performance".

##### **Stage Visualisation and Tactics**

Building on the previous topics, Saul shares his techniques on stage preparation, visualisation routines, and tactics. He explains how to recognise the tactical options on a stage, weigh the alternatives and choose the best solution for you. Saul includes examples of his personal tactical experiences in major matches around the world, and teaches as only one who has "been there and done that" can.

**Running time: 135 Minutes**

### Glasses, Double Alpha

#### DAA Optics Alpha

The DAA Model Alpha offers the serious competition shooter a complete IPSC shooting glasses set with all the "bells and whistles" at a surprisingly

### Glasses, Double Alpha

#### DAA Optics Alpha (continued)

reasonable price. The glasses are ANSI Z-87.1 Impact approved, and the Polycarbonate lens offers full 100% UV400 protection. The Model Alpha is a wraparound 1-piece lens glasses, with a sturdy polymer, fibre-reinforced frame and a complete array of 5 lenses. The Set is packed in a handy hard case, which provides protection and support for all the individual lenses and accessories. The nosepiece is adjustable to allow a more comfortable customised fit and the side arms are slim, perfect for use on the range under ear defenders.

#### Each Set includes:

- A hard case.
- One frame (available in a choice of Tactical Matte Black, glossy Black/Blue or glossy Black/Red).
- A microfibre cleaning cloth.
- A microfibre carry bag.
- A headband strap which replaces the detachable side arms.
- An optical insert inner frame which clicks into place behind the interchangeable lenses.

#### 5 lenses, including:

- Clear, offering 92% light transmission.
- Yellow, offering 87% light transmission and enhanced contrast and depth.
- Smoke, offering 35% light transmission, ideal for moderately sunny days.
- Blue Mirror, 22% light transmission, a striking look for those bright days on the range.
- Rainbow Mirror, 22% light transmission, another striking look for those sunny days.

The adjustable nosepiece provides a comfortable snug fit, and allows you to adjust the height of the frame as needed. Perfect for setting the glasses a little higher when needed, like when shooting prone.

The Model Alpha includes a replacement head-band which snaps into place instead of the side arms. It can be installed in seconds, without tools, and offers you a more secure fitting for those extreme situations.

The Model Alpha is available with a choice of three frames - Tactical Matte Black, glossy Black/Blue or glossy Black/Red. Additional frames can be purchased separately, allowing easier transition from one lens to another.

The optical insert clicks into place behind the interchangeable lenses, allowing you to use all the lens types with just one optical insert. The insert does not include correctional lenses, and you must order those from your optometrist.

Order No.	Price	DAA Optics Alpha Colours

#### DAA Optics Lima Tactical Matte Black

The DAA Model Lima is an inexpensive, yet complete set of 4-lens IPSC shooting glasses. The glasses are ANSI Z-87.1 Impact approved, and the Polycarbonate lens offers 100% UV400 protection.

The Model Lima has a wide wraparound style lens, with a flexible lightweight polymer, fibre-reinforced frame and adjustable-length side-arms. The Set is packed in a handy hard case, which provides protection and support for all the individual lenses and accessories. The nosepiece detaches from the lens and can be transferred quickly and easily from one lens to another as you change colours.

#### Each Set includes:

- A hard case.
- One frame (Tactical Matte Black).
- A microfibre cleaning cloth.
- A microfibre carry bag.
- An optical insert inner frame which clicks on the nosepiece behind the interchangeable lenses.

#### 4 lenses, including:

- Clear, offering 92% light transmission.
- Yellow, offering 87% light transmission and enhanced contrast and depth.
- Smoke, offering 30% light transmission, ideal for moderately sunny days.
- Light Blue Mirror, 35% light transmission, a striking look for those bright days on the range.

### Glasses, Double Alpha

#### DAA Optics Pro Set

The DAA Optics Pro Set is a new approach to multi-lens shooting sets. We all know and appreciate the need to have multiple lenses available to adjust to the changing light conditions encountered on the range during a long day shooting. Anyone shooting outdoors often find themselves hastily trying to change lenses just before shooting a stage, or, worse yet, compromising their vision and shooting with inappropriate lenses due to lack of time to change them. Nothing can be more off-putting than having to rush to change your lenses just before you shoot. In those situations you often find yourself wishing you had an extra frame or two.

Well that is what the new DAA Optics Pro Set is all about! This set offers you, at an affordable price, three complete frames of the new "Lens Lock" design. This sleek new frame provides lever activated lens release and mount, comfortable rubber nose pads, slim side arms and overall striking sporty looks.

With a total of 3 frames and 6 lenses, you should be covered for any lighting conditions on the range! All packed in a custom made hard case that provides protection and support for all the individual lenses and frames.

The glasses are ANSI Z-87.1 Impact approved, and the Polycarbonate lens offers full 100% UV400 protection.

#### Each DAA Optics Pro Set includes:

- A large hard case
- Three Tactical Matt Black frames
- One micro fibre cleaning cloth
- Three micro fibre carry bags
- Three extra sets of rubber nose pads
- Three optical insert frame which clicks into place behind the interchangeable lenses.
- Six lenses -
- **Clear**, offering 92% light transmission
- **Yellow**, offering 87% light transmission and enhanced contrast and depth
- **Brown**, offering 60% light transmission, high contrast, ideal for moderately sunny days
- **Smoke**, offering 35% light transmission, ideal for moderately sunny days
- **Blue Mirror**, offering 22% light transmission, a striking look for those bright days on the range
- **Rainbow Mirror**, offering 22% light transmission, another striking look for

### Glasses, Rudy Project

#### Rudy Project Airblast Performance Kit

#### The very latest shooting glasses from Rudy Project are here!

Designed in collaboration with professional shooters and chosen by the best teams. Leading professional shooters use the new Airblast™ shooting glasses in training and at international competitions. Airblast™ shooting eyewear represents the most advanced optical solution for sport and is stylish too. Airblast™ is the new reference for those who have ambitious aims.

#### Features

##### Shooting glasses to better train your sights on the target.

With the new Airblast™ you will have no more excuses for missing the target! Airblast™ was conceived and designed specifically for shooters and hunters, offering a superior fit and unrivalled optics.

Iron will, steel pulse, perfect concentration and sight: a shooter is an athlete armed with patience who aims for precision because haste is the enemy of a good shot. Rays of light, wind, dust and insects can affect the vital concentration of an athlete. To help you stay focused only on the target, Rudy Project has created eyewear for dynamic shooting sports, a winning shot from rifle shooting to archery. Airblast™ is the most advanced solution in terms of protection, ergonomics and high-definition optics.

##### Rudy Project have removed all the obstacles from your line of sight.

Ideal for any sport that requires perfect visibility and, in particular, for precision sports, Airblast™ is the new Rudy Project shooting eyewear characterised by truly extraordinary visual amplitude. These glasses broaden your field of view and improve your concentration on the target,

## Glasses, Rudy Project

### Rudy Project Airblast Performance Kit (continued)

with no distractions.

For greater breadth of vision, Airblast™ glasses have a rimless maxi mask providing exceptional visibility both laterally and vertically. A perfect engineering solution giving you a clear view of every possible target in the surrounding area.

To improve peripheral vision and cut out optical interference, the AirBlast™ has a specially designed nose pad, the ErgoVI™. The low profile, small size and optimal positioning make it almost invisible so that it won't obstruct the line of sight in any direction.

#### Ergonomics has always been Rudy Project's goal.

With Airblast™, mission accomplished!

In consideration of the requirements of professional shooters, Rudy Project has incorporated a series of innovative solutions into the structure of its Airblast™.

The temples are thin and flattened so they can be worn under protective headphones and still offer maximum comfort. Special ventilation openings in the temples have been designed to increase air circulation and prevent the mask from fogging.

The ergonomic adjustable temple tips of soft rubber ensure a snug fit even when recoil causes sudden stress and twisting of head.

The nose pad is fully adjustable and covered with anti-slip rubber so you can find the perfect seat for the glasses on the nose at exactly the right distance from your face for better air circulation.

The Vented Brow Bar™ is anchored to the top of the mask and has been scientifically designed to provide unsurpassed comfort and fit at all times. It is an ergonomic bar that distances the lens from the forehead and prevents drops of perspiration or impurities from disturbing vision and concentration. The bar has integrated ventilation channels which enhance air circulation vertically and heat dissipation.

The Grilamid® frame provides exceptional durability, flexibility and light weight.

Equipped with high-definition.

Airblast™ is equipped with the Quick Change™ interchangeable lens system that makes it possible to quickly choose the specific optical option for each light condition, quickly and easily by simply unhooking the mask from the temples.

#### Each Kit includes:

- A Patrol Pack case to house both the glasses and the lenses
- One frame (Matte Black)
- Microfibre cleaning cloth

#### 3 lenses, including:

- Clear, offering 92% light transmission.
- Racing Red, offering 28% light transmission and increase contrast and improve depth perception in low light conditions (overcast sky, sunrise, sunset). The light flash treatment also reduces visual stress to a minimum in sunlight.
- Laser Copper, 15% light transmission and enhances contrast and depth, ideal for sunny days. The laser mirror finish reflects the sun's rays and increases visual comfort. The copper tint blocks blue light to enhance visual clarity and contrast.

**Note: All Rudy Project lenses provide 100% UVA & UVB protection.**

#### Rudy Project Genetyk Performance Kit (continued)

Government contracted Simula Technologies to develop a new bullet-proof, transparent, and light-weight material capable of providing superior protection, reliability and longer lasting performance than polycarbonate. This material is also used in the windows in post Sept. 11 cockpit doors being installed on airplanes and Apache helicopter windshields panels; it is today available for Rudy Project Eyewear under a unique and unparalleled lens program: ImpactX™.

- impactx Photochromic Red, offering 21 - 50% Light Transmission
- impactx Photochromic Clear, offering 18 - 78% Light Transmission

and

- Laser Black, offering 12% Light Transmission. Engineered for sunny days and bright light conditions, Laser lenses provide 400uv. A chrome mirror finish is applied to the entire outer surface of the lens. When it is applied on the lens, it reduces glare without altering the performance of the lens underneath.

**\$349<sup>00</sup>**

### Glasses, Rudy Project

#### Rudy Project Prescription Clip - Genetyk

**This Prescription clip fits the Genetyk only.**

Rudy Project Prescription clips are easy to use.

This RX clips works by being placed behind the existing Rudy lenses.

Take both Frame and clip to your local optometrist and they will insert your script into the clip. Yes you can get money back from your health fund but its best to check with your optometrist as health funds vary. It can take 5-7 working days for the optometrist to get the clip done, some can do it at their office but many send them away to optical labs to get done.

Long Tip Oil Dispenser Bottle

This little pen-shaped bottle is a brilliant design, perfect for reaching in and dispensing that drop of oil deep inside those hard-to-reach places in your firearm.

The spring loaded long tip releases a small amount of oil from its end when you depress the plunger on the top of the pen. When you release the plunger, a spring loaded system seals up the tip, preventing the oil from leaking.

The screw-on cover ensures that the plunger cannot be depressed accidentally and keeps even the smallest leak from happening.

The pen can hold about 0.5 oz of your favourite oil.

**Note: Ships empty, without oil! You need to fill it with the oil of your choice.**

- A plastic muzzle guard to protect the crown of the barrel during the cleaning process
- Break Free® CLP® - a quick and easy gun care that cleans, lubricates and protects
- Two working rod sections, both of which are threaded to accept all standard #8-32 accessories
- KleenBore® swivel handle section will clean up to a 7-inch barrel, and with the included 2 3/4" rod extension, will handle up to a 10" barrel handgun
- Both of the #8-32 threaded handgun rod components can be identified by a groove in the rod end
- Rods are made of a smooth, high-grade steel for maximum strength, and feature a black oxide finish and rotating handles
- IPhosphor Bronze Brush

##### For use with these calibers:

- Handguns: .357, .38, 9 mm

**\$42<sup>00</sup>**

### Gun Maintenance, Cleaning Kits

#### KleenBore Handgun Pull-Through Cleaning Kit

A pull-through cleaning kit that performs a complete cleaning with each pass

The combination of the cable's integrated solvent-soaked patch and patch holder brush is pulled through the bore followed by a wet or dry patch making cleaning quicker and more efficient than using patches and brushes individually

Kit comes packaged in a custom-moulded zippered nylon case

For use with these calibers:

- Handguns: .22, .357, .38, .40, .44, .45, 10 mm, 9 mm
- Rifles: .22, .44, .45, 5.56 mm, 9 mm

**\$145<sup>00</sup>**

## Gun Maintenance, Cleaning Kits

KleenBore Handgun Tactical Maintenance Kit -  
.38/.357/9mm

Tailored specifically to meet the cleaning needs of firearms that are used heavily in the field

- Rods feature a muzzle guard to prevent damage to the bore and a rotating handle that provides a precise clean by allowing the rod to tightly follow the rifling
- Rotating handle provides a precise clean by allowing the rod to tightly follow the rifling
- 1/2 oz. Break Free® Lubricant/Protectant oil is specially formulated for use with modern firearms
- 2 oz. Bottle of powerful No. 10 Copper Cutter to counter the effects of jacketed rounds
- Silicone Gun and Reel Cloth
- Includes a 1/4" diameter, precision ground stainless steel rod

### For use with these calibers:

- Handguns: .357, .38, 9 mm
- Rifles: 9 mm

\$79<sup>56</sup>

## Gun Maintenance, Cleaning Kits

KleenBore Tactical Maintenance System for Handguns,  
Rifles & Shotguns

A universal gun care system to cover all the popular firearms  
Rugged, zippered bi-fold pouch with internal compartments

### For use with these calibers:

- Shotguns: 12 Gauge
- Handguns: .357, .38, .40, .41, .44, .45, 10 mm, 9 mm
- Rifles: .223, .30, .44, .45, 5.56 mm, 7.62 mm, 9 mm

### Contents:

- Five-piece steel universal cleaning rod with muzzle guard
- Six phosphor bronze brushes (popular calibers and gauges)
- Five brass patch jags
- 2 oz. No. 10 Copper Cutter Solvent
- 1/2 oz. Break Free® Lubricant/Protectant
- Assorted cotton patches
- Silicone Gun and Reel Cloth
- Shotgun adapter
- Shotgun patch holder
- Double-ended nylon gun brush
- Chamber-Flag

\$131<sup>00</sup>

### Gun Maintenance, Cleaning Kits

#### KleenBore Universal Field Kit

A favorite of hunters, law enforcement, and the military, these compact, easy-to-carry kits go where you go.

Everything needed for a complete cleaning is included in the rugged nylon pouch featuring a belt keeper or MOLLE attachments, with hook and loop closures and compartments for rod and accessories

In the field or on the range, these kits are compact enough to carry for fast and easy removal of impacted mud, snow or a squib load

#### Contents:

- Military-style four piece steel cleaning rod
- Shotgun accessory adapter
- Accessories adapter
- Double-ended nylon bristle utility brush
- A slotted patch holder and a shotgun patch holder
- Universal cotton cleaning strips
- 1/2 oz. Break Free® CLP®
- Silicone Gun and Reel cloth
- .22/.23/5.56 mm, .30/7.62 mm and .44/.45 caliber bore brushes

\$66<sup>00</sup>

### Gun Maintenance, Cleaning Materials & Lubricants

#### Brian Enos's Slide-Glide, 20z. (59ml) Tub

Slide-Glide is a uniquely formulated lubricant that protects all firearms from corrosion and wear. It also softens "felt recoil" in all semi-auto's, especially pistols.

#### Advantages over other oils and greases:

Softens felt recoil in semi-autos

It's super "stringy" - it stays where you put it - forever.

Blended with the highest-grade extreme pressure compound available. Slide-Glide provides a dramatic improvement in lubrication compared to conventional oils and greases such as lithium, or lithium-based metallic greases containing molybdenum or graphite.

Additionally, it is engineered to have a stringy characteristic that prevents "tracking" or shearing on sliding metal surfaces. It stays put - ceaselessly dragging itself back into the friction areas of the cycling slide and barrel.

It's stringy characteristic keeps the grease between the moving parts - noticeably softening the felt recoil of semi-automatic pistols. Your pistol just feels "smoother" when you shoot it.

And Slide-Glide isn't just for semi-auto pistols. It slicks up revolver actions, pump and semi-automatic shotguns, semi-automatic, bolt and lever-action rifles, and even your Dillon reloading press.

#### Lite, Standard, or Heavy?

Slide-Glide is available in three viscosities:

#### Slide-Glide Lite (thin viscosity)

#### Applications:

- -1°C and above
- All Firearms:
- Centrefire Pistols: Non-compensated & Compensated
- Rifles: All action types (including Lever Actions)
- Shotguns: All action types
- Revolvers (Internal action parts only - not for the cylinder)
- .22's
- "Carry Guns" Applied extremely sparingly for maximum reliability
- Slide-Glide Lite's viscosity is blended specifically for "IPSC Open guns" in any temperature, and also works great on the Glock's "connector."

If you only will buy one viscosity, the Lite is perfect for all firearms in all

## Gun Maintenance, Cleaning Materials & Lubricants

Brian Enos's Slide-Glide, 20z. (59ml) Tub (continued)

climates.

**Slide-Glide Standard** (medium viscosity)

### Applications:

- 15°C and above
- Semi-automatic, Centrefire:
- Pistols (non-compensated)
- Rifles
- Shotguns
- Slide-Glide Standard was originally blended for "stock-type" pistols in temperatures above 15°C. Its viscosity is a little too thick for compensated pistols, .22's, and revolvers.

**Slide-Glide Heavy** (heavy viscosity)

### Applications:

- 27°C and above
- Semi-automatic, Centrefire:
- Pistols (non-compensated only)
- Pistols with "loose top ends" (Glocks, Sigs, etc.)
- Slide-Glide Heavy's viscosity is specifically blended for pistols with "loose top ends" (frame to slide fit). In temperatures above 27°C, it also works well in non-compensated, centrefire pistols.

### More...

For maximum protection from wear, Slide-Glide Lite is all you need. But for maximum recoil dampening - use the thickest viscosity that allows your pistol to function with 100% reliability in the temperature where you shoot.

### Carry or Duty Pistols:

Slide-Glide is a grease, so it will slow down a pistol's slide-speed (compared to oil). For carry or duty pistols, protection from wear is not an issue - 100% reliability is the most important factor. For that reason, I only recommend Slide-Glide Lite in carry or duty pistols. And even then - applied very sparingly!

### Polymer or Stainless Steel:

Slide-Glide works great on pistols with polymer frames, like Glocks and Springfield Armory XD's. And for stainless steel pistols, Brian Enos has had quite a few reports that Slide-Glide will make a pistol function with 100% reliability - that would barely function at all with any other oil or grease.

### BEFORE you shoot with Slide-Glide in a competition:

Test the viscosity and how much you apply in the temperature where you will shoot!

Order No.	Price	Brian Enos's Slide Glide

GM104	\$20.50	Standard
GM102	\$20.50	Heavy

## Gun Maintenance, Cleaning Materials & Lubricants

Brian Enos's Slide-Glide, Lite - 1/2 oz. (15ml) Tube

Slide-Glide is a uniquely formulated lubricant that protects all firearms from corrosion and wear. It also softens "felt recoil" in all semi-auto's, especially pistols.

Advantages over other oils and greases:

- Softens felt recoil in semi-autos
- It's super "stringy" - it stays where you put it - forever.
- Blended with the highest-grade extreme pressure compound available.
- Slide-Glide provides a dramatic improvement in lubrication compared to conventional oils and greases such as lithium, or lithium-based metallic greases containing molybdenum or graphite.

Additionally, it is engineered to have a stringy characteristic that prevents "tracking" or shearing on sliding metal surfaces. It stays put - ceaselessly dragging itself back into the friction areas of the cycling slide and barrel.

It's stringy characteristic keeps the grease between the moving parts - noticeably softening the felt recoil of semi-automatic pistols. Your pistol just feels "smoother" when you shoot it.

And Slide-Glide isn't just for semi-auto pistols. It slicks up revolver actions, pump and semi-automatic shotguns, semi-automatic, bolt and lever-action rifles, and even your Dillon reloading press.

### Applications:

- 30+ degrees F
- All Firearms:
- Centerfire Pistols: Non-compensated & Compensated
- Rifles: All action types (including Lever Actions)
- Shotguns: All action types
- Revolvers (Internal action parts only - not for the cylinder)
- .22's
- "Carry Guns" Applied extremely sparingly for maximum reliability

Slide-Glide Lite's viscosity is blended specifically for "IPSC Open guns" in any temperature, and also works great on the Glock's "connector."

If you only will buy one viscosity, the Lite is perfect for all firearms in all climates.

### Gun Maintenance, Cleaning Materials & Lubricants

Brian Enos's Slide-Glide, Lite - 1/2 oz. (15ml) Tube  
(continued)

DAA Blue-Slick Oil 30ml

DAA Blue-Slick Oil is PTFE (Teflon) based and works well across all temperature ranges up to 350 degrees.

It is non-flammable, non-corrosive and non-toxic and is safe to use on all surfaces of your gun, including plastics and polymers.

The oil comes in a leak proof container which has a long tip to reach all those awkward places.

Grab a bottle to put in your range bag as part of your maintenance kit.

3

\$10<sup>50</sup>

### Gun Maintenance, Cleaning Materials & Lubricants

DAA Silicone Cloth

One of the most useful things you can have in your range bag!

#### Improve the feeding reliability of your magazines

- Many top shooters will run their bullets through a silicone cloth before loading the ammo into their magazines. When slightly coated with silicone, the bullets roll better in the magazine, and magazine feeding problems are eliminated. You can also run the silicone cloth through you magazine tubes when cleaning them.

#### Prevent rust and finger marks

- Wipe down the outside of your gun and magazines to prevent rust and remove finger marks.

Each cloth comes in an individual zip lock bag to prevent it drying out.

*Gun Maintenance, Cleaning Materials & Lubricants*

Gun Butter's 1/4 oz Pen Oiler

The perfect GunButter traveling companion in your Range Bag, portable and compact.

Gun Butter is an exotic blend of the finest lubricants available today.

Specifically designed for:

1. Break-in protection and durability
2. Cling-ability (film strength) to maintain its placement
3. And enhanced lubricity to allow superior performance in all weather extremes:
  - Heat - will not burn up in a jet engine
  - Cold - unabated in freezing conditions
  - Wet - stays intact during pouring rain
  - Dry - repels dust and airborne sand
  - Consistency in all weather extremes

Needle oiler provided for precision application.

Yield roughly 20,000 rounds.

Not a grease, it's an oil.

**\$11<sup>00</sup>**

### Gun Maintenance, Cleaning Materials & Lubricants

#### Gun Butter's Trigger and Locking Lug Grease

Gun Butter's Trigger and Locking Lug Grease is a new technology reducing the moment of inertia in moving parts and protection of high impact surfaces.

It will out perform conventional graphite and molly greases and offers many times the adhesion." Trigger Butter" was used exclusively for years in competition by our team. Now blessed by our professional shooters, Gun Butter's Trigger and Locking Lug Grease, is now available for the first time to all shooters of any level concerned with protection and performance.

Suggest application:

- Placed in hammer hooks
- Sear tip and pressure pads / contact points
- The sear spring tip
- Upper and lower locking lugs on the barrel

Also suggested for use on the hammer strut contact point with the cup for the hammer spring.

Use sparingly

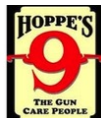

Note: We do not recommend use on slides surfaces if using Gun Butter Oil, as the performance of Gun Butter alone is optimal.

## Gun Parts, Followers, Springs & Base Pads

### DAA Aluminium Standard Base Pads

These precision machined aluminium base pads are made from top quality aluminium and machined to a tight tolerance.

They fit perfectly onto STI/SV/Para/Bul double stack magazine tubes with just that little bit of "wobble" room required.

Normal spring tension will hold these base pads in place, however, DAA have installed a set screw for added security.

These base pads are hollowed out with radiuses on the corners and thickened side walls, and then they are hard anodised to make sure they last long and look great.

DAA are so confident on this product they are offering a **"NO Nonsense" 5 year warranty!**

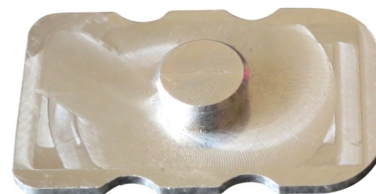

#### Dimensions:

- Weight: 14g
- Width External: 31mm
- Height: 12.5mm at rear of base pad, tapering down to 5mm at the front.
- Length: 40mm

#### Wolff 1911 Variable Power - Recoil & Firing Pin Spring Set

Wolff precision loaded-rated recoil springs are made with the highest grade materials and workmanship. Most Wolff [recoil] springs will remain stable for many thousands of rounds.

Don't compromise on a critical part of your firearm, buy the best.

**Suitable for the 1911 Auto in .45 Calibre, .38 Super & 9mm**

**Set comprises off:**

1 x Variable Power Recoil Spring (choice of 7 LB, 8 LB, 9 LB, 10 LB, 11 LB, 12 LB, 13 LB, 14 LB, 15 LB, 16.5 LB, 17.5 LB & 18.5 LB)

1 x Firing Pin Spring

Following are the relevant Frequently Asked Questions (FAQ) from the official Wolff Spring site:

#### **Q. What is the difference between conventional and variable recoil springs?**

A. The difference is both physical and operational. With a conventional spring, all the coils are spaced equally apart, except for the closed ends. In a variable recoil spring the space varies between coils with less space between coils at one end and more space between coils at the other end.

The way the two springs store energy is also different. For example if a conventional recoil spring is compressed 1/2", it might store 1 pound of energy. For every additional 1/2" this spring is compressed it would then store 1 additional pound of energy. When a variable recoil spring is compressed 1/2", it might store 1/4 pound of energy. The next half inch of compression might store 1/2 pound, the next half inch might store 3/4 pound and so on. In other words, a conventional spring stores energy on a straight line and a variable spring stores energy on a curve. If both springs are rated at 16 pounds, they will both store 16 pounds when compressed to the same working length, but the way they get to 16 pounds is different.

#### **Q. Should I use a conventional or variable spring when both are available?**

A. The choice is often very subjective. Conventional recoil springs are particularly beneficial when shooting heavier loads where keeping the slide closed as long as possible is desired. Variable recoil springs reduce the battery load values with increasingly greater recoil load values. This results in easier unlocking, improved recoil energy storage, dampening, feeding, breaching and lockup. Variable recoil springs are particularly beneficial with

### Gun Parts, Followers, Springs & Base Pads

#### Wolff 1911 Variable Power - Recoil & Firing Pin Spring Set (continued)

compensated pistols and when using light target loads where less recoil energy is available. The "correct type" of recoil spring is best determined through experimentation and your own personal preference. ? ??

#### **Q. What weight recoil spring should I use with a particular load?**

A. This is a very common but hard question to answer in exact terms and in most cases an exact answer is not possible. There are many factors which influence the correct weight recoil spring to use. These factors include the particular ammunition brand and load, individual pistol characteristics, individual shooting styles and your individual, subjective feeling of how the gun shoots and should feel.

The factory spring weight is designed to operate the pistol with what would be considered average loads, plus or minus a little. It is not uncommon for manufacturers to specify what they consider a factory ammunition load. In general terms, the heaviest recoil spring that will allow the pistol to function reliably is the best choice - tempered by the above factors. As a rule of thumb, if your spent casings are first hitting the ground in the 3 to 6 foot range, then the recoil spring is approximately correct. If you are ejecting beyond the 6-8 foot range, then a heavier recoil spring is generally required. If your casings are ejecting less than 3 feet, a lighter recoil spring may be needed to assure reliable functioning. ??

Taking these factors into consideration, it then comes down to how the gun feels and performs when shooting - in your judgment. However, using too light a recoil spring can result in damage to the pistol and possible injury to you.

#### **Q. How often should I change my springs? ?**

A. The performance of your gun is the best indicator of when a spring needs to be replaced. Factors such as increased ejection distance, improper ejection and/or breeching, lighter hammer indents on primers, misfires, poor cartridge feeding from magazines, frequent jams, stove pipes and other malfunctions are all possible indications of fatigued springs or improper springs.

Springs such as magazine springs, striker springs and recoil springs are subjected to higher stress levels and will require more frequent replacement than other lower stressed springs such as firing pin springs and hammer springs.

Wolff springs are made with the highest grade materials and workmanship. Most Wolff [recoil] springs will remain stable for many thousands of rounds. Some recoil springs in compact pistols, especially where dual springs are used or are replaced by a single spring may require changing after 500 - 1500 rounds. Springs that become rusty, bent or otherwise damaged should always be replaced. Again, changes you observe in your firearm's performance are the best indicators that a change is needed.

#### **Q. My spring got shorter after I used it for a short time. Is it bad?**

A. Most new springs will take a set when they are first compressed. That means they will shorten up. This is a normal event and you should not be immediately alarmed. The greater the stress on the spring, generally the more set that will occur. All Wolff springs take this set into consideration. The ratings of the springs you receive are the ratings after the set has

## Gun Parts, Followers, Springs & Base Pads

### Wolff 1911 Variable Power - Recoil & Firing Pin Spring Set (continued)

occurred. After set has taken place, the spring should remain essentially stable for the life of the spring.

**Q. My lighter [recoil] spring is longer than the heavier spring for the same gun. Is this a problem?**

A. Wolff offers many springs in different weights for the same use. Factors such as the size of the wire, the number of coils, the outside diameter of the spring as well as the free length determine the strength of a particular spring. Often, lighter springs are longer than heavier springs because lighter wires and/or a different number of coils are used. Free length is then adjusted to achieve the exact strength desired.

**Q. The spring I purchased is longer than the original spring so I don't think it will fit.**

A. The free length of a spring is not the most important factor in determining whether it will fit. Many Wolff springs are longer than factory springs. This is normal and the spring will fit.

The more important factor in determining whether a spring will fit is the number of coils in the spring times the diameter of the wire. For example, take 2 springs - one is 7 inches long and the other is 4 inches long. If both springs contain the same number of coils and use the same size wire, both springs will compress to the same solid lengths. The strengths will however be quite different but both springs will fit in the same application.

### Gun Parts, Recoil Buffers

Wilson Combat Shok-Buff Recoil Buffer, 1911- Pack of 6

The SHOK-BUFF® prevents the slide from battering the frame during recoil by sandwiching a 1/10" thick poly fibre buffer between the slide and frame contact areas. When you are shooting high performance loads in your 1911 style pistol, you want the extra protection that the original SHOK-BUFF® provides.

- Prevents the Slide from Battering the Frame During Recoil
- Optimum Balance Between Shock Absorption and Longevity
- Easily Replaceable
- Absorbs Up to 1,000 Rounds of Repeated Firings
- Slides Over the Recoil Spring Guide Between Guide and Spring
- Original Injection Moulded SHOK-BUFF®
- Royal Blue and Bears the SHOK-BUFF® Name

Package of 6

The SHOK-BUFF® prevents the slide from battering the frame during recoil by sandwiching a 1/10" thick poly fibre buffer between the slide and frame contact areas. When you are shooting high performance loads in your 1911 style pistol, you want the extra protection that the original SHOK-BUFF® provides. One "Imitations" brand on the market claims they are better because their buffer lasts a little longer. The object of the frame to slide buffer is to protect the pistol from wear, if the buffer is not soft enough to take the damage instead of the pistol what have you accomplished? We feel the original SHOK-BUFF® is the optimum balance between shock absorption and longevity. Easily replaceable after absorbing up to 1,000 rounds of repeated firings, the SHOK-BUFF® slides over the recoil spring guide between guide and spring. Why take a chance on an inferior die stamped copy when you can have the original injection molded SHOK-BUFF®? With over 30 years of competition and street proven experience and hundreds of thousands sold, the original SHOK-BUFF® is still the best. Don't be fooled by imitation products, current production Wilson SHOK-BUFF® buffers are royal blue and bear the SHOK-BUFF® name.

**NOTE:** SHOK-BUFF® buffers are recommended for full-size (5" barrel) 1911's only. Due to space constraints, we do not recommend their use in compact (less than 5" barrel) 1911's.

The design also incorporates aggressive checkering and a wide, deep, cutaway to allow easy thumb access to any style of mag catch.

The Glass/Expoxy composite is totally resistant to oils and solvents, so they will not be effected when cleaning.

Choice of four colours (Black, Green, Grey & Red).

#### Set includes:

- Right and Left Hand Grip panels
- 4 Stainless Steel Torx Screws with custom head design
- Torx Key

## Hearing Protection, Electronic

### 3M Peltor SportTac (Black / Red)

#### Optimal attenuation

A gunshot is an impulse noise, which is particularly harmful to the human ear. A single shot can cause permanent damage without the proper hearing protection.

Our range of hearing protectors for shooting are specially designed to

## Hearing Protection, Electronic

### 3M Peltor SportTac (Black / Red) (continued)

attenuate, for example, from noise of a gunshot. for reassured protection.

Easy and comfortable

Many shooters have to wear their hearing protectors for a long time. The range of hearing protectors help ensure you'll have no problems staying focused. The low, two-point fasteners allow an even distribution of pressure over the whole cushion area, to help ensure the ear muff stays in place even during sudden head movements or positioning the weapon. This feature also helps ensure a snug fit without compromising comfort and protection for high quality sound reproduction.

#### Hear what you want to hear

Our level dependent hearing protectors contain advanced electronics with built-in microphones.

The level dependent ear muffs can amplify external sounds up to four times which enables the shooter to detect faint sounds helping pin-point targets with great accuracy.

Not only are sounds amplified, but they are also reproduced in stereo, allowing you to detect exactly where they are coming from. You become a better hunter when you can hear your dogs and prey from a greater distance. A direct connection to an external communication radio enhances teamwork with your fellow hunters and boosts safety. Some of the products in the level dependent range allow you to adapt the stereo balance, for example if you have a hearing impairment in one ear.

The unique digital sound circuit eliminates the sharp sound clip that is typical for most level dependent hearing protectors on the market. Many people find that sound unpleasant and disturbing.

The new electronics in the Peltor<sup>TM</sup> SportTac<sup>TM</sup> hearing protector react instantaneously, protecting your hearing from loud impulse noises. The system reacts so gently that you rarely hear the clip as the protection is activated.

Just like the other level dependent hearing protectors from 3M, the SportTac hearing protector also enhances your hearing, so you actually hear better with the hearing protector than without it. The Peltor<sup>TM</sup> SportTac<sup>TM</sup> also allows you to connect your hunting radio directly to the headset.

- Specially designed for hunters and marksmen
- Smooth active-volume function that helps prevent the sound being cut off abruptly
- Interchangeable shells make it easy to change colours (black and red shells included)
- Automatic shut-off
- Foldable
- Battery life span about 600 hours
- Audio input for an external radio

#### Attenuation Information:

SNR=26dB, H=29dB, M=23dB, L=16dB

## Hearing Protection, Electronic

### MSA Sordin Silicon Replacement Ear Pad Kit

Making the best even better!

The replacement Silicon Gel Kits, include 2 Silicon ear Pads and 2 new insulation cushions. It is important to replace the cushions from time to time, to ensure good hygiene and best sound performance. This upgrade kit gives you extra cushions, in addition to the main item - the new silicon Gel Pads.

You need to try these to best appreciate them. The silicon in the pads is in a gel state, not liquid, so even if punctured it will not leak. The Silicon molds itself around the contour of your head, offering even more comfort and better sound protection than the normal sponge based ear pads.

The Silicon Gel pads really shine when you use the ear protection with shooting glasses, as we usually do. They mold themselves around the arms of the glasses, improving sound protection and preventing pressure of the glasses against your head.

The Sordin Silicon Gel Ear pads can be used with all the Sordin models offered here - the Supreme Pro and the Pro-X. The original pads are easily replaced, and can be kept as spares for future use. No modification is needed to the ear defenders when using this silicon gel upgrade kit.

## Hearing Protection, Electronic

### MSA Sordin Supreme Pro

Simply the best quality electronic ear defenders ever made!

You only have to hold them in your hands, and try them on once, to know that you are holding the best electronic ear defenders on the market today!

The Supreme Pro is the top-level model available from world leader MSA-SORDIN.

#### Its features include:

- Provides optimum protection with high amplification, AUX input and watertight battery compartment.
- Both earmuffs are shaped to suit both right-handed and left-handed shooters (for comfortable rifle mounting).
- Two separate, well-shielded microphones for optimum stereo effect and location of sound direction.
- Rugged "military spec" construction: One piece moulded cups, steel pins connecting the head band, glass fibre reinforced polymer head band and water proof one-piece switch rubber control panel.
- High amplification and natural sound reproduction without chopping.
- Around 600 hours battery life with two standard AAA batteries.
- Power saving auto shut-off feature after 4 hours of no button input.
- AUX input for connecting external audio sources, such as an MP3 player, hunting radios or dog tracker.
- Lead with 3.5 mm mono jack plug included.
- A comfortable, luxurious leather lining covers the head band.

#### Attenuation Information:

EN352-1/EN 352-4/EN352-6: SNR = 25 dB, H = 28 dB, M = 21 dB, L = 16 dB  
ANSI S3.19-1974: NRR = 18 dB

## Hearing Protection, Electronic

### MSA Sordin Supreme Pro X - Electronic

The Sordin Supreme-Pro X takes the Supreme Pro line to the next level. This model of electronic ear defenders offers all the great features of the Supreme Pro model plus the following special features:

1. It is totally water proof, not just water resistant like the Supreme Pro. In the Pro-X model even the microphones themselves are water proof. You could go swimming with these! (Don't!...)

2. The Pro-X comes backed with a Manufacture's 5 year full warranty (the supreme pro has one year full warranty).

The Supreme Pro is the top-level model available from world leader MSA-SORDIN. It's features include:

Provides optimum protection with high amplification, AUX input and watertight battery compartment.

Both earmuffs are shaped to suit both right-handed and left-handed shooters (for comfortable rifle mounting).

Two separate, well-shielded microphones for optimum stereo effect and location of sound direction. (water proof mics in Pro-X model)

Rugged "military spec" construction: One piece molded cups, steel pins connecting the head band, glass fibre reinforced polymer head band and water proof one-piece switch rubber control panel.

High amplification and natural sound reproduction without chopping.

Around 600 hours battery life with two standard AAA batteries.

Power saving auto shut-off feature after 4 hours of no button input.

AUX input for connecting external audio sources, such as an MP3 payer, hunting radios or dog tracker.

Lead with 3.5 mm mono jack plug included.

A comfortable, luxurious leather lining covers the head band.

#### Attenuation Information:

EN352-1/EN 352-4/EN352-6: SNR = 25 dB, H = 28 dB, M = 21 dB, L = 16 dB  
ANSI S3.19-1974: NRR = 18 dB

## Hearing Protection, Passive

### Bilsom L2 Non-electronic Hearing Protection

Simply the best affordable ear defenders in the market.

When you're on the range and need to block noise, Bilsom's Leightning series steel wire construction provides high performance and robust durability. Leightning stands up to daily use and abuse without compromising comfort. Bilsom has optimised the Leightning series to deliver the highest level of comfort available, featuring an exclusive padded foam headband and supersoft ear cushions that eliminate that "squeezing pressure" on the head.

### Hearing Protection, Passive

**3M**

3M Peltor X4A Passive Ear Defenders

The X-Series earmuffs are 3M's latest advancement in hearing conservation. New technologies in comfort, design and protection all come together in this groundbreaking earmuff line. The X4A utilises a newly designed spacer, specially formulated foam liners and innovative ear cushions to help improve attenuation. This lightweight, lower-profile earmuff helps with compatibility with other personal protective equipment and is designed for protection against moderate-to-high level industrial noise and other loud sounds. It features an electrically insulated wire headband, often referred to as "dielectric".

The wire headband offers consistent pressure over prolonged wearing periods.

Earcup pivot points tilt for optimum comfort and efficiency.

Replaceable ear cushions and foam liners (hygiene kit HYYX4).
