

MOTION SENSOR LED LIGHT

IVAMV8LED

User Manual

1 Powering Up

1. Remove the battery cover.
2. Insert (4) 1.5-v AA batteries into the battery compartment. (Be certain to observe that the polarities of the batteries match the “+” and “-” symbols in the battery compartment.)
3. Replace the battery cover.

2 Operating Modes

1. When you first slide the power switch to its “AUTO” position, the LEDs will light even if it’s in a well lit room. Within a short time, the circuitry inside the light fixture will reset itself. The LEDs will turn off until the room’s light level falls below 20-lux and its PIR circuitry senses motion from a warm, moving source.
2. As an example, the night light will illuminate a hallway between the bedroom and bathroom, or the hallway to the kitchen for that late-night snack. The light will only illuminate **A**) when the sensor detects that the room is dark and **B**) when it detects motion. The light will remain on as long as it detects motion and will automatically shut off 30 seconds after no motion is detected or when the hall light is lit.
3. When you slide the power switch to the “ON” position, the LEDs will light and the auto-sensing circuitry will be disconnected allowing you to use the night light as an emergency flashlight or to keep the area lit for longer than 30-sec.

3 Operating Tips

1. For best results, install the LED fixture 4 to 5-ft above the floor.
2. Avoid mounting near a refrigerator, air conditioner, stove, etc.
3. Avoid obstructions which can block moving heat such as glass, curtains, and furniture.
4. Don’t face the lamp directly at a window.
5. Install the lamp wherever a temporary source of light is needed. Use it in a closet, hallway, outdoor walkway, near a gate, etc.
6. Use alkaline batteries for longest life.

4 Specifications

LEDs	8
LED Lifetime	100,000-hrs avg
LED Brightness	1300-1500-MCD
Led Color	White
Sensor Angle	≥60°
Power Source	3 x 1.5-v AA batteries
Weight	3.25-oz (w/o batteries)
