A. Introduction

Thank you for choosing **Real Estate Script (RES3)**. We hope that our latest release will meet your expectations. Through this user manual we would like to make your experience with our product as best as possible. Read below some guidelines on how to get your way with the basic or not so basic settings, find out how to work with the admin area, listings, package system and other aspects of managing your script-based website without having to bother yourself with tech details.

B. What is new in RES3

1) Front-end area

1. Search by map improvements

- **new clustering algorithm** allows to display multiple markers on the map without limitation.
- different icons for each listing type

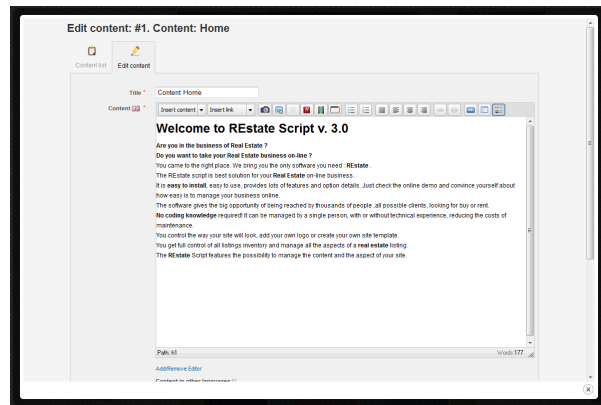

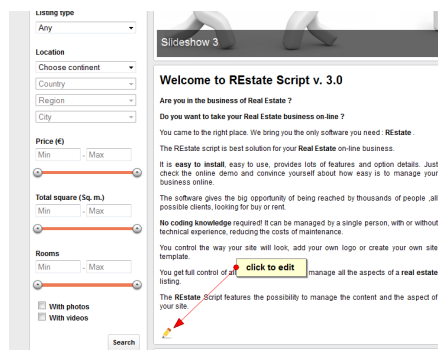

2. Slider changes

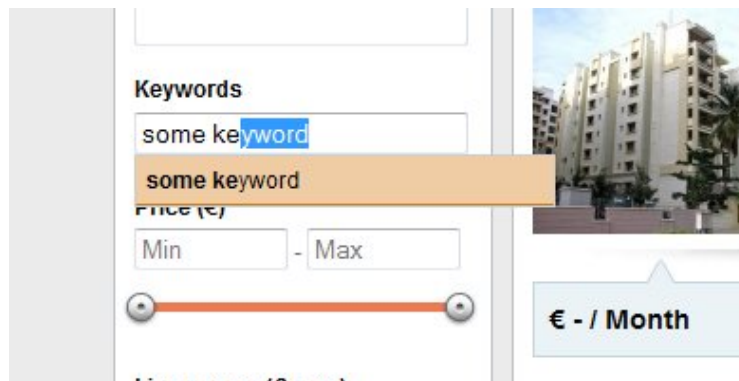

3. New user type: „guest“.

Guests can receive newsletters, can review a member, can add listings to wishlist, can chat with online members.

4. Quick cms content edit

5. Search by keywords with auto-complete (+chinese support).

6. Search speed improvements + new refine search filters search by utilities, facilities.

7. Seo improvements: seo filters, /languages/[XX]/seo.php file for different terms & combinations.

8. Compare list

9. Chat system

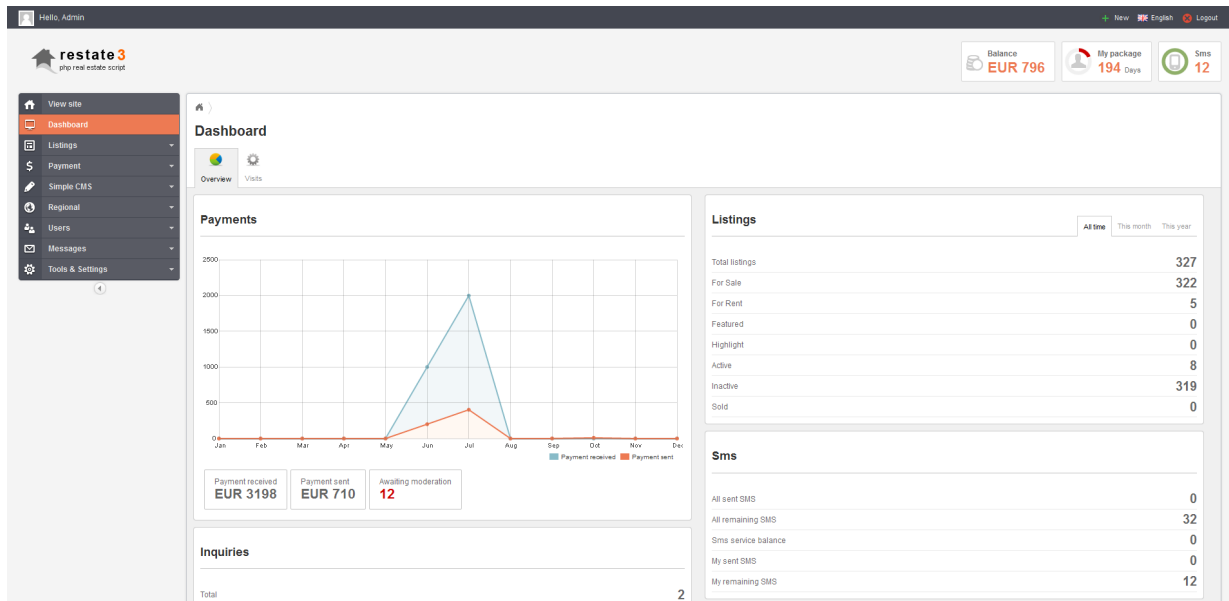

The screenshot shows a property listing interface. On the left, there are four small images of interior spaces. The main content area includes a 'Name: Member' header, a 'Company name: X-Scripts' header, and a 'Users rating: 0/5 (0 reviews)' section. Below this, there are links for 'View agent listings', 'Chat', 'View site', and 'Contact'. A yellow callout box with a red arrow points to the 'Chat' link, containing the text 'click to chat with the property owner'. Below the links, there are icons for 'Save to Wishlist', 'Mortgage Calculator', 'Print', 'Pdf brochure', and 'Send to a friend'. A '21 View(s)' counter is also present. At the bottom, there is a 'Listings same agent' section with a 'Single family for sale' listing priced at '€ 120,000'. On the right, a 'chat window' is open, showing a conversation between 'Me' and 'member'. A yellow callout box with a red arrow points to the chat window, containing the text 'chat window'.

- registered guests can chat with the online members (the members should have a package with "Allow contact" on "yes").
- Admin can chat with any online user

The screenshot shows the 'Manage users' interface. At the top, there is a 'Users list' section with a 'Add user' button. Below this, there is a table with columns: #, Banned, Active, Newsletter, Role, Username, Email, Package, Listings, Balance, Sms, and Options. A yellow callout box with a red arrow points to the 'Active' column, containing the text 'green bullet indicates an available for chat user'. Another yellow callout box with a red arrow points to the 'Username' column, containing the text 'click to chat with the selected user'. The table shows one user with ID 2, who is not banned, is active (indicated by a green bullet), and has a role of 'member'. The 'Username' is 'member' and the 'Email' is 'vrs_owner@vacationrentalscript.com'. The 'Package' is 'Package A / Expires: 192 Days', 'Listings' is 5, 'Balance' is €394, and 'Sms' is '-'. The 'Options' column has edit and delete icons. At the bottom right, there is a 'Go to page #' field.

2) Admin area

1. Design changes

2. Autosave for: listings, cms content, news.

3. Wysiwyg editor changes + html image map plugin.

The screenshot shows the 'Edit content' interface for 'Content test cms'. The interface includes a 'Content list' sidebar and a main editing area. The main editing area has a title field 'Content test cms' and a content area. The content area contains a 'Test image map' section. The 'Test image map' section includes a world map with labels for North America, South America, Europe, Asia, Africa, Australia, and Antarctica. The map is titled 'Test image map' and has a description 'Click on any continent on the map.' Below the map, there is a path field 'Path: p > img' and a button 'Add/Remove Editor'.

Annotations on the screenshot include:

- 'click for html image map' pointing to the 'Test image map' section.
- 'click for advanced editor' pointing to the 'Add/Remove Editor' button.

4. Edit in place

Note: the items that can be edit in place are marked with a bottom gray dotted line.

Manage adverts

Adverts list

Adverts list

Add advert

<input type="checkbox"/>	2		✓	1	01-Nov-2013			-
<input type="checkbox"/>	3		✓	2	01-Nov-2013			-
<input type="checkbox"/>	4		✓	3	01-Nov-2013			-

5. Drag & drop to change hierarchy for: listing photos (via thumbs view), links (via links tree view), listing types (via links tree view).

Allowed types: jpg, jpeg, png, gif

Photos

0 Selected | Action

6. Listing photos processing: crop, re-size, rotate.

7. Bulk emails – send emails to group(s)

8. Spam filter for inquiries

9. Listing new fields: rooms, distances, orientation, parking type, construction type, etc

10. Listing videos: .mp4 support, .avi to .flv convert (requires ffmpeg library), embed code with auto-complete from video link.

11. Users logo: gravatar support.

12. Search speed improvements

C. Installation

After receiving the zip file containing the **REAL ESTATE v.3** script you must go through the following steps:

a) Create a new directory on your server for the script files. (e.g. /dir)

b) Upload all the files included in the zip file to your server, in the new directory.

Note: if you want the script to be visible on http://your_site.com/ upload the files in the root folder (usually /public_html) and skip a) and b).

c) Create a database on your server. In some cases, you will need to contact your hosting company for assistance if you don't have access to CPanel or similar. Note your database name, username & password for later use.

d) Run install script using "http://your_site.com/dir/install/" from the browser.

Note: replace "yourserver.com" with your domain & replace "dir" if you called your directory something different.

e) Install will prompt you for required data (server configuration, database configuration, admin username/password).

Please fill in the empty fields.

f) After successful install, you will be able to log into admin area (use the login info set on step e))

Install Notes:

1. The script's source code is IonCube encrypted in order to avoid code alteration. If you get error messages on install, related to IonCube loader

a. if you have access to php.ini file follow the instructions from :

<http://yourserver.com/dir/install/loader-wizard.php>

b. if you don't have access to php.ini file, please contact your hosting company.

2. The script requires some files / folders to be fully writable (chmod 777).

*/dir/logs/
/dir/cache/
/dir/xmles/
/dir/utmp/
/dir/public/themes_c/

/dir/public/upload/adverts
/dir/public/upload/adverts_resize
/dir/public/upload/captcha
/dir/public/upload/flags
/dir/public/upload/flags_resize
/dir/public/upload/gflash
/dir/public/upload/gimages
/dir/public/upload/gimages_resize
/dir/public/upload/listing_photos
/dir/public/upload/listing_photos_resize
/dir/public/upload/listing_videos
/dir/public/upload/logos
/dir/public/upload/logos_resize
/dir/public/upload/no_img
/dir/public/upload/no_img_resize
/dir/public/upload/qrcodes
/dir/public/upload/unzip

/dir/private/config/alias.php
/dir/private/config/db.php
/dir/private/config/installer.php
/dir/private/config/mod_rewrite.php
/dir/private/config/base_url.php
/dir/private/config/admin_email.php*

The script will try to make these files fully writable automatically

If the automatic process fails:

- the script will display some error messages.*
- the files / folders must be made fully writable manually*

3. *The script will try to automatically detect the base url. Sometimes, on some server the auto-detect fails.*

In this case :

a. open /private/config/base_url.php

b. change this line:

\$config['base_url'] = '';

with

\$config['base_url'] = 'http://www.your_site.com/dir/';

4. *After installation chmod the following files to 644.*

/dir/private/config/db.php

/dir/private/config/installer.php

/dir/private/config/mod_rewrite.php

/dir/private/config/base_url.php

/dir/private/config/admin_email.php

D. Starting tips

Login using the username and password you have entered in the installation form and proceed to the administration area.

The screenshot shows the 'restate3' login interface. At the top is the logo 'restate3' with the tagline 'php real estate script'. Below it is a 'Login' form with three input fields: 'Username' (containing 'admin'), 'Password' (masked with dots), and 'Captcha code'. Below the captcha field is a distorted image of the word 'Captcha'. A red arrow points from a yellow box at the bottom, which says 'click to refresh the captcha code', to the captcha image. Below the form are links for 'Forgot password?' and 'View site', and a footer that says 'Res3 DEMO by R Scripts'.

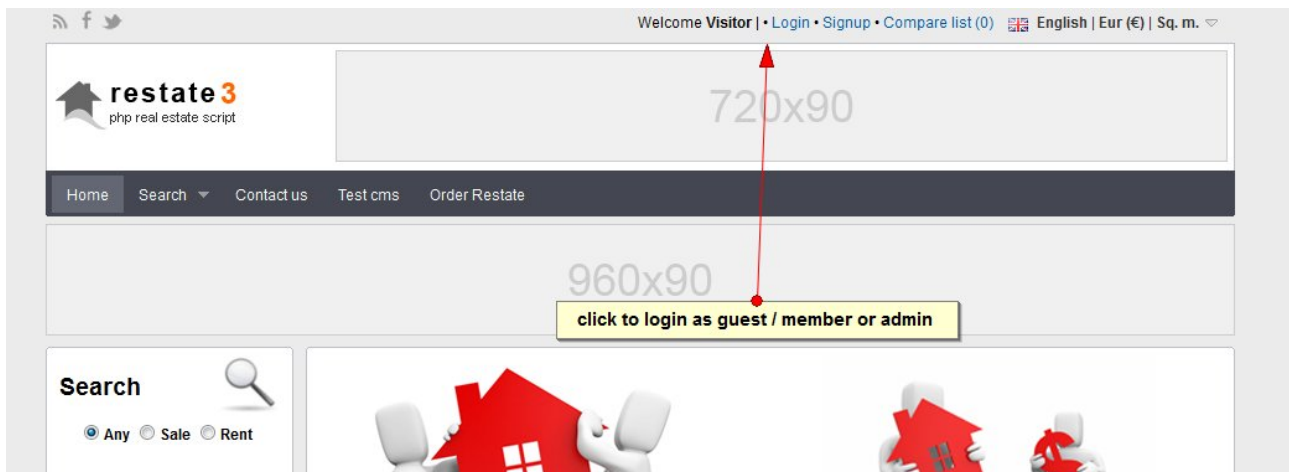

NOTE: To login as admin:

a. go to **/admin** relative to the installation folder on your server.

Eg: http://your_site.com/dir/admin

or

b. click on „Login” link, located on the right top part of the front-end area.

If the login process is successful, you'll be redirected to the admin area index page. The first things to be noticed are the left column containing the expandable menu. (for small screens with the resolution $\leq 1100\text{px}$ the menu will collapse).

In the central part of the admin index you have some helpful information categorized into Overview, Visits.

From the menu you can manage almost every aspect of the website. Click any category to expand it and reveal the options.

1) Set the languages

After the successful installation you need to configure some basic settings before in order to get the website going.

First of all go to the **Regional** section and choose **Manage Languages** . In this section you can manage the languages which will be available on your site. From the manage languages you can add, edit or remove the languages.

Notes:

- **the script can handle max 5 active languages.**
- **the order/hierarchy of the languages is very important, try to set it from the beginning and try not to change it in the future.**
- **if the hierarchy change is really important then please follow the steps:**
 - create a database backup**
 - change the languages hierarchy**
 - swap the languages content**

Manage languages > List languages

List languages

List languages + Add language

2 Selected | With selected: Action

<input type="checkbox"/>	#	Active		Use system flag	System flag
<input checked="" type="checkbox"/>	1	✓	⬆️ 2 ⬆️	✓	🇬🇧
<input checked="" type="checkbox"/>	2	✓	⬆️ 3 ⬆️	✓	🇫🇷
<input type="checkbox"/>	3	✓	⬆️ 4 ⬆️	✓	🇩🇪
<input type="checkbox"/>	5	✓	⬆️ 5 ⬆️	✓	🇷🇺
<input type="checkbox"/>	4	✓		✓	🇮🇹

If we don't have the language files that you need, you can try translating the English language files into your language.

2) *How to make a new language pack*

The language files are located in the **/languages** folder .

Make a new folder in the languages directory. (**eg. /languages/spanish**).

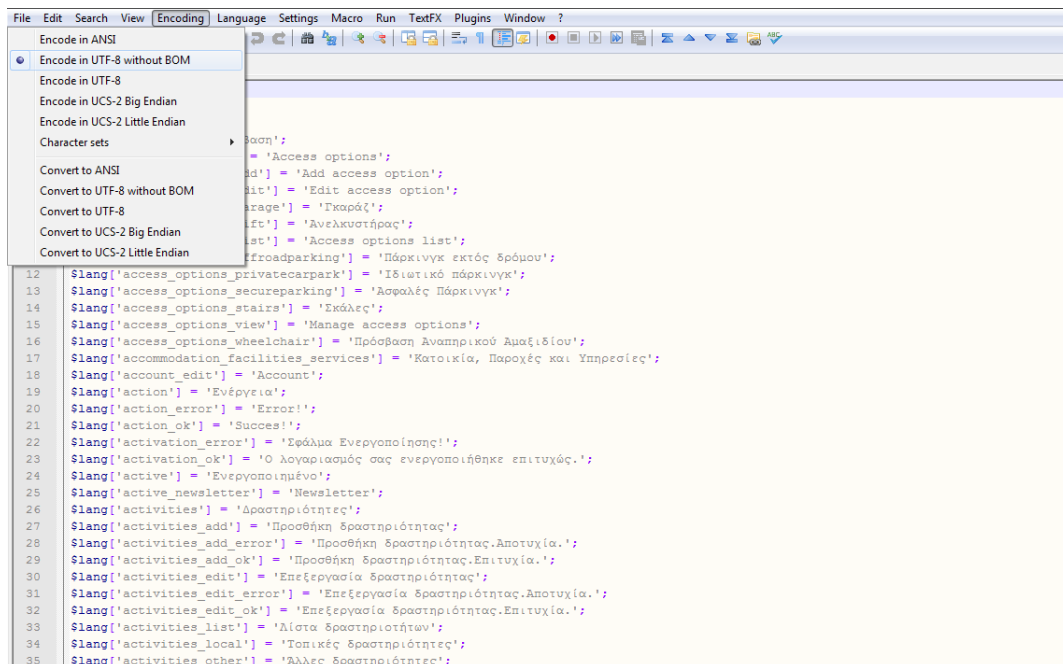

Copy the files located in **/languages/english** to the new created folder **/languages/spanish**.

Your languages directory should look now like this :

```
/languages
|___ /english
|___ /spanish
|___ globals.php
|___ email.php
|___ db.php
```

Open each file located in **/languages/spanish/** with any text editor (eg. Notepad++ , you can download it from <http://notepad-plus-plus.org/>) and make the translation .

When you save the file don't forget to save it UTF-8 without BOM encoded.

3) Settings

a) Choose from admin area menu **Tools & Settings / General**

Here you can set:

- default site title, description, keywords
- Twitter, Facebook links (if any).
- Number of featured listings : featured listings are displayed in front-end homepage, search results top slider. This number limits the number of listings to display in each of these sections.
- Number of latest listings : the latest listings means the new listings added through the system and sorted by creation date.
- Number listings same member / same location : these are displayed in the listing details page (right side).

b) Choose from admin area menu **Tools & Settings / Messages**

If you use smtp for sending emails, you can set here the smtp host, username, password and port.

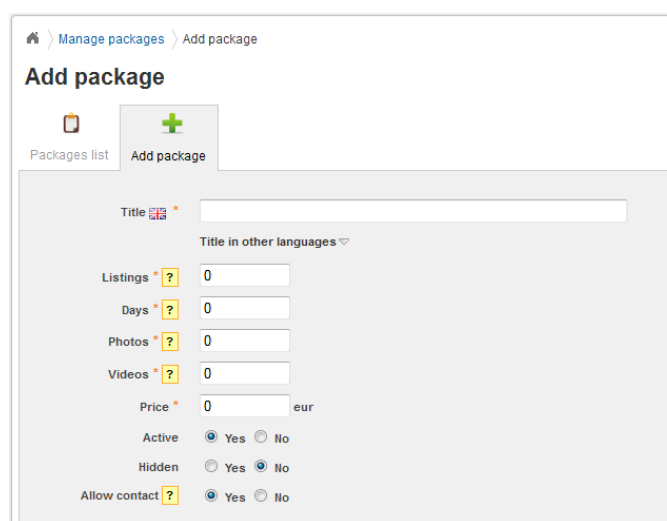

If you don't know these info, please contact your hosting company.

From same section you can set the SMS login info for Clickatell api.

c) Choose from **Payment / Manage packages**

Before you can start adding properties you must add packages.

You must fill in the blank fields accordingly.

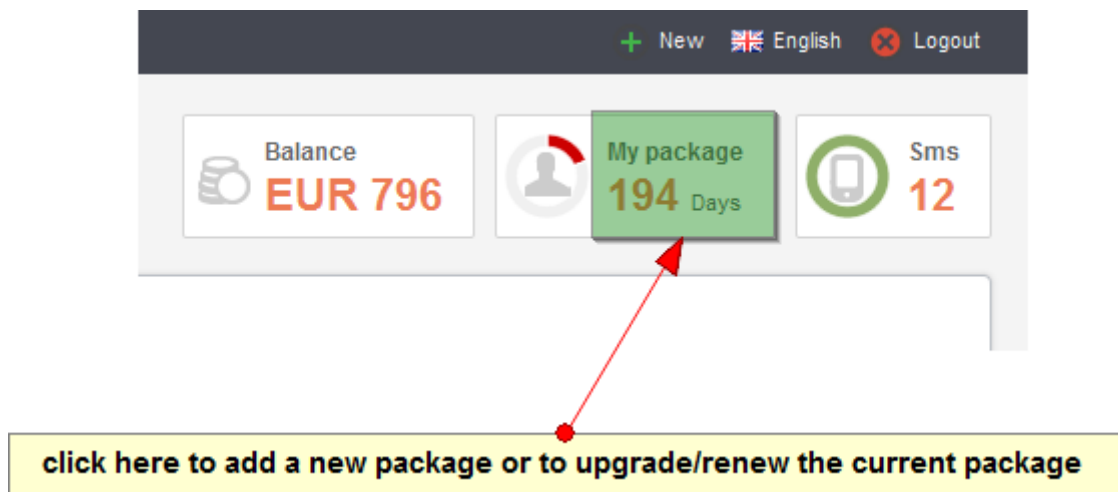

The screenshot shows the 'Add package' form in the admin area. The breadcrumb trail is 'Manage packages > Add package'. The form title is 'Add package'. There are two tabs: 'Packages list' (selected) and 'Add package'. The form fields are:

- Title  *
- Title in other languages 
- Listings * ? 0
- Days * ? 0
- Photos * ? 0
- Videos * ? 0
- Price * 0 eur
- Active ☒ Yes ☐ No
- Hidden ☐ Yes ☒ No
- Allow contact ? ☒ Yes ☐ No

- **Title:** this should be as revealing as possible. So the customers will know what are paying for.
- **Listings:** how many listings will this package display on your website.
- **Days:** the period of time for which the listings will be displayed on your website.
- **Photos:** how many photos a listing can display.
- **Videos:** how many videos a listing can display.
- **Price:** the price the customers will pay for this package.
- **Hidden:** if this is set on yes the package will be visible for admins only.
- **Allow contact:**
 - a. **if yes** – the inquiries will go to property owner directly, the contact info will be displayed
 - b. **if no** – the inquiries will go to admin first, the contact info will not be displayed.

d) Assign a package to admin

Click on the right top of admin area like is shown in the picture.

It will be displayed a page like is shown in the picture:

The screenshot shows a web interface for managing user packages. At the top, there's a breadcrumb trail: Home > Manage users > Edit user > Profile. Below this, the title is 'Update package, User: #1. admin'. There are several tabs: List users, Overview, Profile, Balance, Package (selected), and Sms package. The 'Package' tab shows the current package as 'Package A' with details: Listings: 100, Photos: 20, Videos: 5, Allow contact: No, Expires: 25-May-2014 05:50 (194 Days). Below this, there's a table with two rows: 'Package A' (EUR 1) and 'Admin package' (EUR 9999). The 'Admin package' row has a 'Click to add funds' link. At the bottom, there's a 'Save' button and a label 'upgrade / renew options'. Red arrows point from yellow callout boxes to specific elements: 'click to change user's profile' points to the 'Edit user' link; 'click to add / remove funds' points to the 'Package' tab; 'click to change sms package' points to the 'Sms package' tab; 'the current package name' points to 'Package A'; 'current package info + expiration date' points to the package details; and 'upgrade / renew options' points to the 'Click to add funds' link.

e) Choose from **Settings & Tools / Payment**

Signup Default package / Signup default balance: if default package is set, the new members that register on the site will have assigned automatically the selected package.

If default balance is set, the new members that register on the site will have assigned automatically the amount specified.

These settings are used/good for trial periods.

Paypal , Wire transfer, Authorize.NET, 2Co, Worldpay : Here you can set your payment gateways.

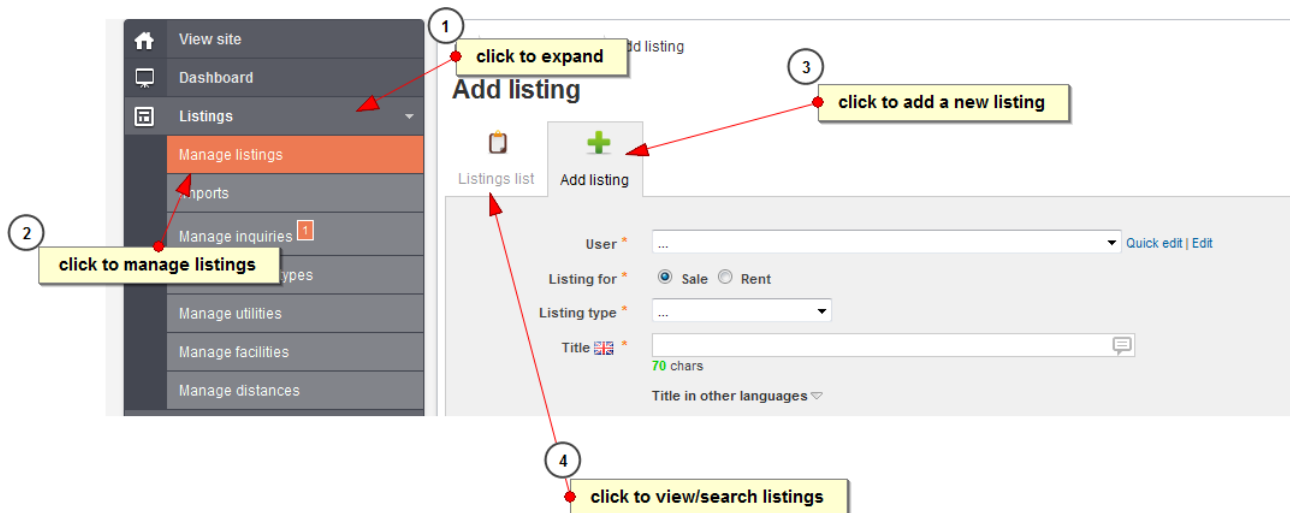

You have the option to select which payment method you want to use by activating either one of the two or maybe all.

E. Admin Panel

1) Listings

i) Manage listings

Here you can add, edit or delete any listings available on your website. Adding a listing is nothing complex.

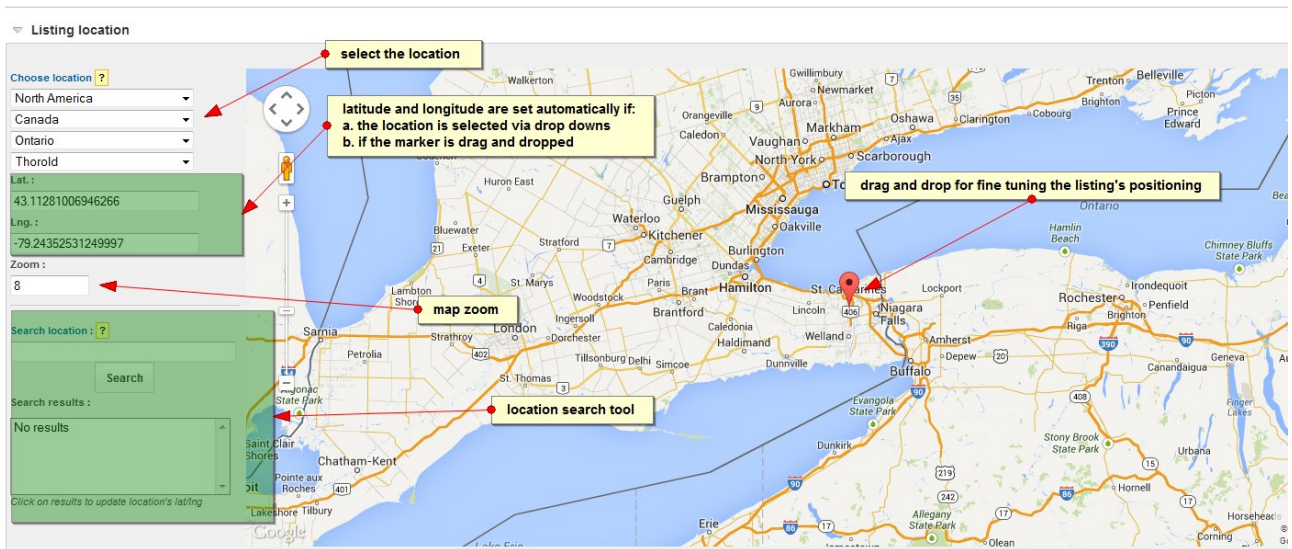

There are only a few things to explain. The adding process is divided into 6 main steps: Overview form, Photos, Videos, Availability (for rent listings), Paid services and Settings.

Overview form: you get to set the main info about the property: price, number of rooms, surfaces, location, listing type, descriptions (of the property, neighborhood, etc), suitability, amenities, utilities, etc.

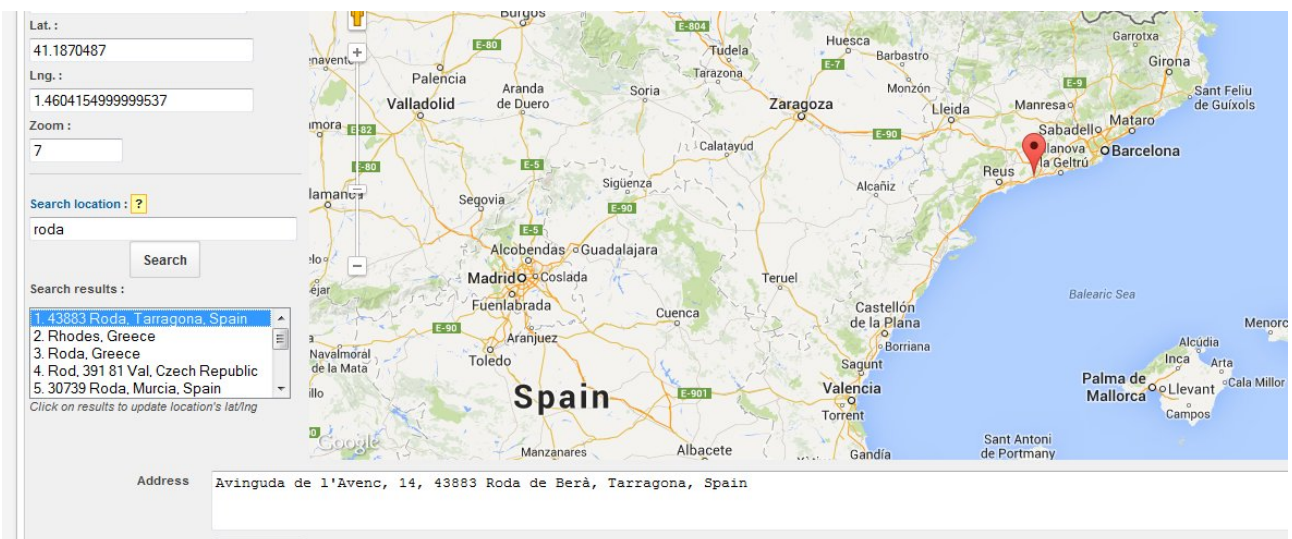

How to use the map: by default the script will try to adjust the map according to the selected location (using drop downs).

If all fine in the „Listing location” section you'll see the latitude / longitude and map zoom automatically set.

If you are not happy with the automatic latitude / longitude results or the automatic process returns no results, you can manually search for a location using the „Location search tool“.

If there is more than one result, choose from the list the correct location.

Double click to change the zoom, click and drag the pin till you are happy with the results.

Paid services

Featured properties are displayed on homepage and in search results in the top slider box.

Highlight properties are displayed in the search results in a higher hierarchy and also are marked differently than the other listings.

The **Photos** form here you can upload photos. The number of photos to upload is limited to the current user's package.

Manage listings > Edit listing > Photos

Edit listing: #4. Commercial office for rent

Add photo(s)

Listings list Overview Photos (4 / 20) Videos (0 / 5) Availability Paid services Settings Preview

click to change the view

Browse Switch to default uploader

click to switch on default uploader

Max photo size: ∞ KB, 2000 × 2000 px
Allowed types: jpg, jpeg, png, gif

« Overview Upload Videos »

Photos

0 Selected | With selected: Action

drag and drop to change the hierarchy

List view Thumbs

Total records: 4

Notes:

- there are two different views, **list view** and **thumbs view**. In thumbs view you can drag and drop in order to change the photos hierarchy.
- The flash uploader allows: multiple photos upload same time + re-size on client side (in theory this means the photos can be any size).

The **Videos** form here you can upload videos or embed videos. The number of videos to upload/embed is limited to the current user's package.

Notes 1:

- For .avi uploads, you need to have the ffmpeg library installed on your server. For more info please contact your hosting company.
- If you have the ffmpeg library installed on your server and you want to allow .avi uploads, please open /private/config/config_app.php file and change this line:

```
$config['ffmpeg'] = array(  
    'active'    => false  
    ...  
);  
to  
$config['ffmpeg'] = array(  
    'active'    => true  
);
```

Notes 2:

For embed videos, the script has an auto-complete tool. The script will try to recognize the video link

Home > Manage listings > Edit listing > Videos

Edit listing: #4. Commercial office for rent

Add video

Listings list Overview Photos (4 / 20) Videos (0 / 5) Availability Paid services Settings Preview

Upload Embed

Embed

Embed in other languages ▾

Active ☒ Yes ☐ No

and fill in the embed field with the appropriate embed code.

The screenshot shows the 'Edit listing' interface for a commercial office for rent. The 'Videos' tab is active, showing an 'Embed' section with a YouTube video player and its embed code. The video player displays 'The Star Trek Apartment' and has a play button in the center. The embed code is visible in the text area above the player. The interface includes a top navigation bar with 'Manage listings', 'Edit listing', and 'Videos'. Below the navigation bar, there are tabs for 'Listings list', 'Overview', 'Photos (4 / 20)', 'Videos (0 / 5)', 'Availability', 'Paid services', 'Settings', and 'Preview'. The 'Embed' tab is selected, and the video player is shown with the title 'The Star Trek Apartment' and a play button. The embed code is visible in the text area above the player. The video player has a progress bar at the bottom showing 0:00 / 3:25. The interface also includes a 'Settings' section with 'Active' status and 'Yes' / 'No' options.

The **Settings** form.

- **show address:** if unchecked – the property address will not be displayed
- **show availability calendar:** if unchecked – the availability calendar will not be displayed.
- **show walkscore:** if checked, in the listing details, below google map it will be displayed the walkscore map.

For more info about walkscore, please check: <http://www.walkscore.com/>

ii) **Manage inquiries**

Here you can manage all the inquiries sent on your website.

Inquiries are sent when the guest contacts the member via „Contact” tab in front-end area / listing details.

By default the inquiry status is „pending” (awaiting review / moderation).

In admin area can be seen the „admin status” column. If this is on „reviewed” ... the inquiry is visible by members too, if on „unreviewed”... the inquiry is visible by admin only.

When an inquiry is sent:

- the script checks the property owner package.
- If the package has „Allow contact” on „no” the inquiry's „admin status” will be set on „unreviewed” -> this means the inquiry is sent to admin only.
- If the package has „Allow contact” on „yes” the in inquiry's „admin status” will be set on „reviewed” -> this means the inquiry is sent directly to owner.

Notes:

The screenshot shows a table titled 'Inquiries list' with columns: Spam, Admin status, and Name. The table contains three rows of data. Annotations with red arrows point to specific elements:

- A yellow box points to the '88.46 %' in the first row: "spaminess % - red color + big percent (very close to 100%) indicates that the message is very probable to be a spam."
- A yellow box points to the red 'X' in the 'Admin status' column of the first row: "admin status 'unreviewed' - the inquiry is on pending/moderation mode and is visible by admin only."
- A yellow box points to the green checkmark in the 'Admin status' column of the second row: "admin status 'reviewed' - the inquiry is visible by members and admin"
- A yellow box points to the red 'X' in the 'Spam' column of the third row: "the inquiry was marked as spam"

Spam	Admin status	Name
88.46 %	X	Admin
88.46 %	✓	Admin
X	X	Admin

- the admin can set a message as being: spam or ham (the reverse of spam).
- The members can set a message as being: spam
- when a new inquiry is sent through the system, the script will also calculate the spaminess %. the spaminess is a statistical number, based on users experience and indicates if a message **is probable** to be a spam.
- More spam reports means more accurate spaminess %.

iii) Manage listing types

Here you can manage the listing types.

Listing types list

#	Active	Searchable	Hierarchy	Parent	Marker	Title	Slug
1	✓	✗	0 ✓	-	-	root	root
2	✓	✓	1 ✓	-	-	Residential	residential
3	✓	✓	2 ✓	-	-	Commercial	commercial
4	✓	✓	3 ✓	-	-	Land	land
5	✓	✓	1 ✓	Residential /	🏠	Apartment	apartment
6	✓	✓	2 ✓	Residential /	-	House/Villa	housevilla
7	✓	✓	3 ✓	Residential /	-	Single family	single-family
8	✓	✗	4 ✓	Residential /	-	Multi family	multi-family
9	✓	✓	1 ✓	Commercial /	-	Shop	shop

Note: in the tree view you can drag and drop to change the hierarchy.

Important to know here :

- slug field is used for search. Should contain alpha-numeric + hyphens only (a-z,0-9,-). And also should be unique.
- Also u can set if the listing type is search-able or not. If this field is set on „no” the listing type will not appear in the „Refine search” area.

For performance reasons, the max number of search-able fields is set to 5.

iv) Manage utilities

Here you can manage the utilities.

By default script comes with a series of utilities but you can change/edit/delete in order to fit your business needs.

Important to know here :

- slug field is used for search. Should contain alpha-numeric + hyphens only (a-z,0-9,-). And also should be unique.
- Also u can set if the utility is search-able or not. If this field is set on „no” the utility will not appear in the „Refine search” area.

The max number of search-able fields is set to 5 per section.

v) Manage facilities

Here you can manage the property facilities : general facilities, outdoor facilities, indoor facilities.

By default script comes with a series of facilities but you can change/edit/delete in order to fit your business needs.

Important to know here :

- slug field is used for search. Should contain alpha-numeric + hyphens only (a-z,0-9,-). And also should be unique.
- Also u can set if the facility is search-able or not. If this field is set on „no” the facility will not appear in the „Refine search” area.

The max number of search-able fields is set to 5 per section.

vi) Manage distances

Here you can manage the property distances. Eg. „Nearest school”.

When a property owner will add he's listing he will be able to choose the distance(in meters, km, etc) till „Nearest school”.

2) *Payment*

i) **Manage coupons**

The coupons can be used to create discounts.

Discount: can be fixed price or percent.

Uses: the number of times the coupon code can be used.

ii) **Add funds**

In admin area this section is just for tests...to see if the „add funds“ module is working correctly or not.

In members area this section is used to „add funds“. The funds are necessary in order to : purchase / upgrade / renew package; purchase paid services : make a property featured or highlight.

The balance is displayed in the top right corner.

iii) **Payment history**

In this section, the admin can manage/review the payment requests.

This section is related to packages, add funds, paid services.

Each payment activity made by the owners like : spend funds / add funds ..etc can be seen/managed from here.

For each payment activity a PDF invoice is generated.

iv) **Manage packages**

In this section you can manage the packages.

The process is explained in the „Installation“ chapter.

Packages are used by members in order to display listings on the site.

If the package expires, all the listings of that member will be made inactive.

Also a cronjob can be set on the server in order to send to the member an email 3 days before package expiration.

The cronjob can be set to run daily and the command should be something like this :

php cron.php --run=/cron/alert_packages

Note: the path to cron.php should be absolute

eg: php /path/to/cron.php --run=/cron/alert_packages

v) Ipn logs

Here you can check the ipn logs.

Ipn = instant payment notification.

3) Simple CMS

i) Links

Links section is used to create static pages and links.

The form looks like in the picture:

The screenshot shows the 'Links' form in the Simple CMS. At the top left, there are two buttons: 'Links list' and 'Add link'. A red arrow points from the text 'click to add a new page / link' to the 'Add link' button. Below these buttons, there are two tabs: 'Page' and 'Link'. A red arrow points from the text 'click to add a link' to the 'Link' tab. The 'Page' tab is currently selected. On the left side of the form, there are three yellow callout boxes with red arrows pointing to specific fields: 'click to add a page' points to the 'Title' field, 'click to add a link' points to the 'Link' tab, and 'click to add a new page / link' points to the 'Add link' button. The form fields include: 'Title' (with a language selector), 'Title in other languages', 'Parent' (with a dropdown menu showing a tree structure: Main menu, Home, Search, All For rent, All For sale, Contact us, Test cms, Order Restate, Terms and conditions), 'Slug' (with a language selector), 'Slug in other languages', 'Content&Template' (with a dropdown menu showing 'Choose content' and 'Edit content | Create content'), 'Choose template' (with a list of templates: default_theme, index.tpl, index_ajax_page.tpl, index cms_page.tpl, index_left_menu.tpl, index_no_design.tpl, index_slideshow.tpl), 'Extra options' (with a dropdown menu), and a section for 'No follow', 'No index', 'In sitemap', 'Is homepage', 'Active', and 'Hierarchy' (with radio buttons and a text input).

Title: link title or page title.

Parent: the link can be assigned to a parent. For example if we want a link in the main menu we'll choose the parent „Main menu“.

By default the default theme supports multi level menu, so you can assign a link to a menu item.

Content & Template : these drop-downs make the difference between anchor links and page links.

If these are set then the link is a page link.

- Content : you can set here the page's main content.
- Template : in order to display it we need to choose a template for that page.

Slug: the slug is used to make the page link seo-friendly.

External link: the anchor link can point to an external site. Eg:
<http://www.google.com>

Internal link: the anchor link can point to an internal link. Eg: search

Is homepage: if set on yes the page link will be the „Home“ page.

Seo section: used to make the page seo friendly. The admin can fill in here the meta title, meta description, meta keywords.

Note: in the tree view you can drag and drop to change the hierarchy.

ii) **Manage news**

The admin can add news using this section. By default the news are displayed on the homepage, latest news on the top.

iii) **Manage adverts**

In this section you can manage different types of adverts (banners).
Image adverts, flash adverts, jscript adverts.

Start date, End date: here you can set the advert promotion period.

If the current date is greater than the **End date**, the advert will be disabled automatically (expired).

Advert type: you can add Image adverts (.jpg, .gif, .png), Flash adverts (.swf) or Jscript adverts (like Google Adsense).

Title, Description: you can add a descriptive title and/or short description for the advert.

Advert position: here you can set where the advert should be displayed.

Available positions : left, bottom, top, slideshow, right.

The **slideshow position** is a custom position, the slideshow can be seen on the homepage.

Each slide is a new advert with the position „slideshow“.

Link: when the advert is clicked, the visitor will be redirected to this address.

Link other: here you can set other parameters for the link anchor tag.

Eg: class="some_class"

Direct link: if yes, the banner's clicks will not be count.

Note: Only the Image type adverts are countable.

Advert file: if the advert is an Image type or Flash type you'll upload the advert file using this control.

Advert code: if the advert is a Jscript Type you'll add the advert code using this control.

Width & Height: advert dimensions. If the advert is an Image type these will be calculated automatically by the script.

If the advert is a Flash type, these info should be filled in manually.

Advert prefix / suffix: sometimes is needed to add some text or html code before/after the advert, you can do that from here.

Eg.: if i want to insert the advert into a specific div tag, i'll write something like this :

prefix : <div class="my_div">

suffix: </div>

Featured: if yes, the current advert will be displayed higher in hierarchy than the rest of the adverts in the specified position.

How the adverts are called in templates?

You'll need this info if u want to make a new theme or you want to place the adverts in different places than the default.

If you'll check the : /public/themes/default_theme/tpls/index.tpl template you'll notice this line:

```
{load_adverts advert_position='top' random=false}
```

This line loads all the templates from the 'top' position.

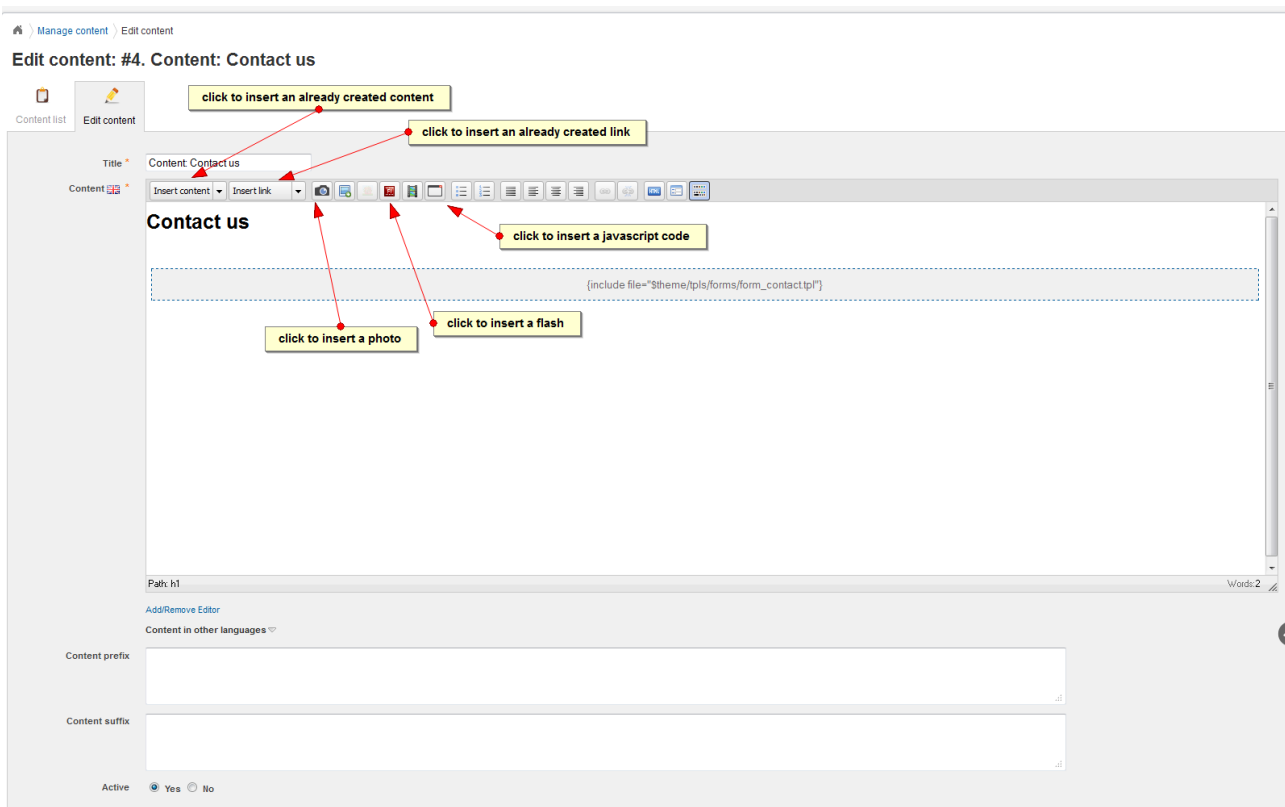

advert_position can have one of the following values: 'left','top','bottom'

random can be true or false, if false all the adverts from the selected position will be displayed, if true just one advert from the selected position will be displayed and that adverts is chosen by the script on random.

iv) Manage Flash, Manage Photos, Manage Content

Manage content is used to create „contents“. The contents are pieces of texts+images+flashes.

When you write a content you'll see a form like this :

Title: descriptive text of what the content contains

Insert Content, Insert Link: in any content you can insert an already created content or an already created link

The editor: is simple and is used to help on text formatting. The editor allows you also to add photos (from database or url), to add a flash animation (from database or url), to add a javascript code.

v) **Manage css, Manage templates**

The script is templates based. Templates are html files with the extension .tpl and contain pieces of html code.

The script uses Smarty templates system, if u want to read more u can check the smarty site : <http://www.smarty.net>

All you need to know about templates files is that they contain html and smarty variables. The smarty variables are pieces of text like : `{ $this_is_a_variable }`. These smarty variables are replaced by the script with custom functionalities and should not be removed.

The script is themes based. This means you can make your own theme.

The default theme is located in : **/public/themes/default_theme/** directory.

If you'll check this folder u'll notice couple of folders :

/css folder : contains .css files

/images folder : contains images used by the theme.

/js folder : contains jscript files used by the theme

/tpls folder : the templates folder.

In „Manage templates” section you can manage the template files.

You can click on „Browse templates” link, browse the template you wish to edit, make the changes and save.

On each save a „back-up” of the template is made, so if you make a mistake the old file is stored on the server.

In „Manage css” section you can manage the css files. The process is similar with the one described for „Manage templates”.

Seo filters

Seo filters are used to overwrite the meta title, description, keywords for specific pages.

Eg:

we have a link like this:

http://your_site/search/europe

the default meta title will be : Listings in Europe

in order to change/overwrite it you can add a new seo filter.

The filter will be the part after domain name, in this case: search/europe

Seo title (your new meta title): Luxury listings in Europe

Seo description(your new meta description): Listings in europe description

Seo keywords(your new meta keywords): listings, luxury, europe

4) Regional

i) Manage locations

In this section you can manage the locations. The locations are used in listing upload process.

Note:

- By default the script has some „reserved” locations : the root of locations tree (called „world”) and the „world's continents”. These locations by default are locked.
- The „locked” status is just an internal script protection in order you not to accidentally delete one of these locations.

The screenshot shows the 'Manage locations' interface. At the top, there are buttons for 'tree view', 'click to add new location', 'click to import locations', and 'click to rebuild the locations tree (only if the tree is broken)'. Below these are icons for 'List locations', 'Locations tree', 'Add location', 'Import locations', and 'Rebuild tree'. A table lists three locations:

#	Active	Parent	Title
7601828	✓	World / Europe / Russia / Moskovskaya Oblast' /	Noginsk-9
7601774	✓	World / Oceania / Kiribati / Gilbert Islands /	Bikenibeu Village
7576812	✓	World / Europe / Germany / Land Hessen /	Rabenau

Add/Edit location

Adding a location is a simple process.

The screenshot shows the 'Add location' form. It includes fields for 'Title' (Cesenatico), 'Parent' (World / Europe / Italy / Emilia-Romagna), 'Slug', 'Lat.' (44.2008438), 'Lng.' (12.404932000000003), and 'Zip/Postal Code'. There are also checkboxes for 'Active' (Yes/No). Annotations point to various parts of the form:

- 'click to set the parent for current location' points to the 'Parent' field.
- 'click to reset the parent. the new parent will be "world"(the root node for locations tree)' points to the 'Parent' field.
- 'location's title' points to the 'Title' field.
- 'click to set the location's latitude/ longitude' points to the 'Lat.' and 'Lng.' fields.

Title : location's name (eg. Cesenatico)

Parent : the location's parent. Click on „Browse locations” link and choose the appropriate parent for the current location. eg. The parent for „Cesenatico” is the region „Emilia-Romagna”

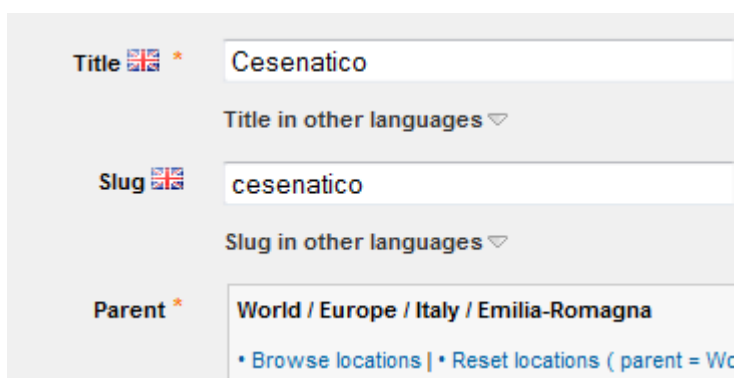

Note: if the „click to reset parent” link is clicked, the parent for current location will be set to „World”(the root of the locations tree)

Lat, Lng : latitude and longitude .

Google map link: will help you set the latitude / longitude.

When a location is added, the script will automatically add it's **slug**.

The slug field can be seen and / or edit in the edit mode.

The screenshot shows a form with three main sections. The first section is for the 'Title', with a text input containing 'Cesenatico' and a dropdown for 'Title in other languages'. The second section is for the 'Slug', with a text input containing 'cesenatico' and a dropdown for 'Slug in other languages'. The third section is for the 'Parent', with a breadcrumb-style dropdown showing 'World / Europe / Italy / Emilia-Romagna'. Below the parent dropdown are two links: 'Browse locations' and 'Reset locations (parent = Wc'.

The slug field is used for search...so it's an important field.

Import locations

By default the script comes with a world database that can be imported.

The world database contains countries / regions / cities worldwide.

Import locations routine:

Step 1. From the „Manage locations” top menu, click on the "Import locations" button.

Step 2. select from the "Available countries for import" drop down the "world" option if your business is world-wide or choose a continent from the list and click on "Import locations" button.

The screen should now look like this:

Manage locations
Import locations

Import locations

List locations

Import locations

Available countries for import
...

Start import ...
Starting from line: 52748

	Session	Done	To go	Total
Lines	3154	52747	?	?
Queries	17	284	?	?
KB	833.34	13881.69	1832.87	15714.56
MB	0.81	13.56	1.79	15.35
Progress				

Back to list

When the progress indicator is on 100% the locations are imported and ready to use.

Rebuild tree

The script uses the nested-sets as locations tree representation in the database.

For more info you can check this link:

<http://dev.mysql.com/tech-resources/articles/hierarchical-data.html>

Each location stored in the database have 2 numbers assigned to it : lft and rgt values.

When a location is added or updated (moved to other parent), these 2 numbers are recalculated.

Sometimes number calculation fails (server load, memory problems ...etc).

In this case we have the „Rebuild tree” feature witch refresh / recalculates the location lft and rgt numbers.

This feature should be used only if you add a listing (property), and u don't see the locations in the drop-downs but you're 100% sure you did add those locations.

The advantage of this method is that is fast selecting/searching into big

number of locations...the disadvantage is that this method is slow on updates (uses lot of resources, time or memory).

Note: try not to use this feature if not necessary.

ii) Manage languages

This section was explained previously (please check the „Starting tips“ section).

iii) Manage currencies

The currencies are used when your add / edit / display property's prices.

The currency rates are updated automatically every day.

If you don't want the currency rates to be automatically updated, you can open /private/config/config_app.php file and change this line:

```
$config['automatic_currency_rate_update'] = true;
```

to

```
$config['automatic_currency_rate_update'] = false;
```

5) Users

i) Manage users

The script can handle 3 types of users: **admins**, **members** (property owners) and **guests**.

Admins: can log in to their control panel using a link like this :

http://your_site.com/admin

The admins have full rights, they can manage anything: settings, users, packages, etc.

Also an admin can add he's own listings.

Members: have to signup before accessing their control panel area.

After they fill in the signup form in front-end area, the members have to first confirm their email address. They receive an email with a confirmation link they have to click.

If confirmation ok, the members can login to their control panel clicking on the „Login“ link in front-end or directly accessing a link like this:

http://your_site.com/member

The member's control panel looks similar with the admin's control panel but with some exceptions:

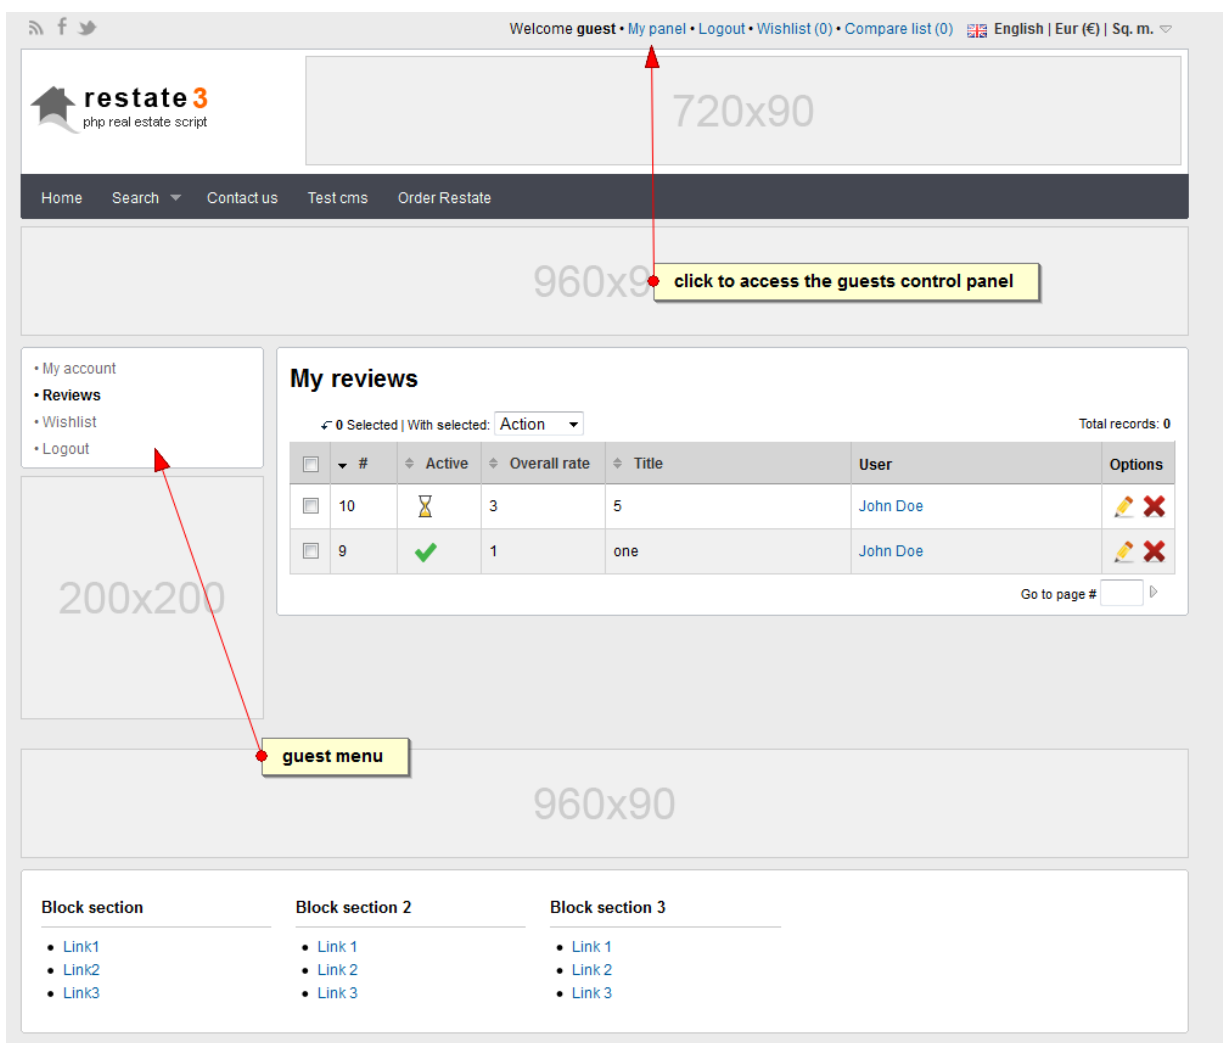

- the member can change he's profile
- the member has limited rights : he cannot see or change settings, other users, other listings but he's own listings, etc
- the member can manage only he's listings, inquiries, reviews

Important to know here is that an admin cannot login as admin and as member on same browser. He can login as admin and as member same time but using different browsers. For example he can login as admin using Firefox and as member using Google Chrome.

Guest: have to signup before accessing their control panel area. They can login from front-end.

After login the guest can access the control panel via „My panel” top link :

Add / edit users

Overview form: here you can set the user's login info.

Manage users > Edit user

Edit user: admin

click for overview form

List users Overview Profile Balance Package Sms package

Role * Admin 321 Listings the user's number of listings + link to user's listings

Username * admin

Password * Generate password click to generate a random password

Retype password * b!h!tpuuBp the generated random password

Password strength

Name * Admin

Email * vrs_admin@vacationrentalscript.com

Phone

Phone#2

Sms phone

Sms active ☐ Yes ☒ No type here the random password

Fax

Country

Location

Address

Sms phone + Sms active : in order to receive sms, the user should have set the „sms phone” and „sms active” should be on „yes”

Banned + ban reason : if the banned is set on yes the user will not be able to login to he's control panel. The ban can be temporary that's why if the ban is activated the user's listings will not be deleted.

Newsletter : the admin can send to all the registered users different kind of messages (notes, information, promotional messages, etc) using the „Mail / Bulk mails” section. If this is set on „yes” the user will get emails from admin.

Profile form:

In this section you can set user's other info : company name, logo, spoken languages, website address.

Notes: if no logo is uploaded, the script will try to identify the gravatar logo.

More info on: <http://gravavatar.com/>

Balance form:

[Home](#) > [Manage users](#) > [Edit user](#) > Credits

Balance, User: #1. admin

[List users](#)
[Overview](#)
[Profile](#)
[Balance](#)
[Package](#)
[Sms package](#)

• Current balance : [EUR 796](#) • Payment received : [EUR 0](#) • Payment sent : [EUR 21](#) • Modified : 31-Oct-2013 09:01

Add funds [?](#) EUR

The admin can change any user's balance by adding / removing funds.

To remove funds, just use negative numbers.

Also here can be seen the user's balance info:

Payment received: total funds added by the user into he's account. This counter will not increment if the admin add funds for the user, it will increment only if the user add funds via he's control panel.

Payment sent : total funds user spent on paid services: upgrade package, featured listings, highlight listings.

Modified: last transaction made date/time.

Package form:

[Home](#) > [Manage users](#) > [Edit user](#) > Package

Update package, User: #1. admin

[List users](#)
[Overview](#)
[Profile](#)
[Balance](#)
[Package](#)
[Sms package](#)

• Current package: [Package A](#)
 • Listings: [100](#) • Photos: [20](#) • Videos: [5](#) • Allow contact: [No](#) • Expires: [25-May-2014 05:50 \(193 Days \)](#)

Renew or upgrade package

	Price	Package info
	EUR 1	Package A Listings: 100 Photos: 20 Videos: 5 Days: 1000 Allow contact: No
Click to add funds	EUR 9999	Admin package Listings: 9999 Photos: 9999 Videos: 9999 Days: 9999 Allow contact: Yes

Here can be managed the current user's package.

At the top of the form there are some info about the current package : package name, package total number of listings, number of photos, number of videos and the expiration date.

Renew or upgrade package: here you can renew/extend (upgrade) a package for the current user.

Also the user's account will be charged with the package price.

The members will see here the list of available packages with the price \geq current package price. This means that the members cannot downgrade, just renew the current package or upgrade the current package.

Also the members cannot see here the hidden packages, the hidden packages can be seen by admin only.

SMS Package form:

Here can be managed the current user's sms package.

Manage users > Edit user > Sms package

Edit sms package, User: #1. admin

List users Overview Profile Balance Package **Sms package**

• Current package : 10 sms • Total SMS : 12 • My remaining SMS : 12 • My sent SMS : 0

Renew or upgrade package	Price	Package info
<input type="radio"/>	EUR 10	10 sms Number sms : 10
<input type="radio"/>	EUR 30	20 sms Number sms : 20

At the top of the form there are some info about the current sms package : package name, package total number of sms, number of sms remained, number of sms sent.

The sms are sent when a visitor sends an inquiry to some member via „Contact” tag.

Renew or upgrade package: here you can renew/extend (upgrade) a sms package for the current user.

Also the user's account will be charged with the sms package price.

ii) Manage reviews

Here you can manage all the reviews sent on your website.

The reviews can be added by logged in users only.

Each member/agent can be reviewed by guests via „Write review” form in front-end area.

By default the reviews status is „pending” (awaiting moderation).

6) Mail

i) Manage e-mail templates

This section is used to manage the email templates sent through the system or to add new email templates for the bulk emails.

Each mail template has an alias, this is important and shouldn't be deleted or changed.

The alias is used by the system to call the email template.

System e-mail templates by alias :

- **add_credits_approve:** when funds are added to some user's account an email is sent to that user.
- **add_credits_fail :** when an user try to add funds, but the payment was not confirmed an email is sent to that user to inform him that the transaction failed.
- **contact:** this is used when some visitor wants to contact the admin via the „Contact us” form in front-end area.
- **newsletter_subscribe:** this email is sent when some visitor fills in the „Newsletter” form in the front-end
- **new_review:** when a guest writes a review for some member, an email is sent to the property owner to inform him about the new review.
- **package_expired_alert:** a cronjob can be set on the server to run on server daily with a command like this :

```
php cron.php --run=/cron/alert_packages
```

this cronjob will send an alert email to the owner 3 days before the package expiration date.

Note: the path to cron.php should be absolute

Eg: `php /path/to/cron.php --run=/cron.alert_packages`

- **payment_activity:** for each payment activity : add funds, spend funds an email is sent to admin to inform him about.
- **pending_inquiry_admin:** when a visitor wants to contact some property's owner, he will use the „Contact” form from the property details page.

If the owner has a package with „Allow contact” set on „No” the email will be sent to admin first.

- **pending_inquiry_member:** this email is sent when the admin confirms a pending inquiry „Admin status” is „reviewed” or the owner has a package with „Allow contact” set on „Yes”, in this case the inquiry email goes directly to the member.

- **reset_password_request:** when some uses wants to reset he's password an email with the password reset link is sent to him.
- **reset_password:** after a password reset, the user gets an email to inform him that the password was successfully changed.
- **registration:** this is used to send the activation email to a newly registered owner.
- **send_to_friend:** this templates is used when some visitor likes a property and want to send that's property link to some friend's email.
- **spend_credits_approve:** if some user pays for some service, an email is sent to that user with some info about the transaction.
- **spend_credits_fail:** if an user wants to pays for some service but he don't have enough funds an email is sent to inform him that the transaction failed.
- **wire_transfer_invoice:** if the user choose to pay using the wire transfer, an invoice email is sent to him.

Note: Important here is that the admin can receive a copy of any of the emails sent through the system if he will set in the „bcc copy” field the email recipient where he wants to get the copy.

ii) Bulk mails / Newsletters

The screenshot displays the 'Add bulk mails' form. At the top, there are two tabs: 'Bulk mails list' and 'Add bulk mails'. The 'Add bulk mails' tab is active. Below the tabs, there are three checkboxes for 'Send to': 'Guests' (checked), 'Members' (unchecked), and 'Admins' (checked). Below these are links for 'Check all' and 'Uncheck all'. The 'Mail template #' field has a dropdown menu and links for 'Edit mail template' and 'Create mail template'. The 'Send time' section includes 'Date' (13 Nov 2013) and 'Hour' (12:23) fields. There are two rows of radio buttons: 'Queued' with 'Yes' and 'No' (selected), and 'Test mode' with 'Yes' and 'No' (selected). At the bottom, there is a 'Start offset' field with a question mark icon and the value '0'.

Here can be activated a „newsletter”. The admin can choose an already made template or can compose a new email using the „Create email template”

section of this form.

In order to work a cron job should be set on server to run from hour to hour with the following command:

```
php cron.php --run=/cron/send_newsletter
```

Note: the path to cron.php should be absolute.

Eg: php /path/to/cron.php --run=/cron/send_newsletter

The amount of emails sent on each cron run can be set from the following config file :

```
/private/config/config_app.php
```

search for these lines:

```
$config['mail_q'] = array(  
    'start'=>0,  
    'quantity'=>50  
);
```

The quantity means the number of emails that can be sent at once on each cron run. This should be set to a reasonable number and depends of your server capabilities.

Queued: if yes, the newsletter is activate and started to send emails. When all the emails are sent the queued is automatically set on „no“.

Offset: each time a newsletter is activated (queued = yes) the offset should be 0. When all the emails are sent the queued is set on „no“ and the Offset is set on 0.

During the emails send process the offset will change it's value, and this number is like a book page index.

Eg: any book has pages, on each page you see the page number.Each page have rows of text. You can imagine that every time you read a row of text an email is sent...when you finish the page, you go on on the next page.

Same here, after X emails sent the offset number will change...like book page number.

User group: each newsletter can be sent to selected user types.

Test mode: if on „yes“ the script will send just 1 test email on newsletter sender's email.

F. Themes and templates

1) Introduction

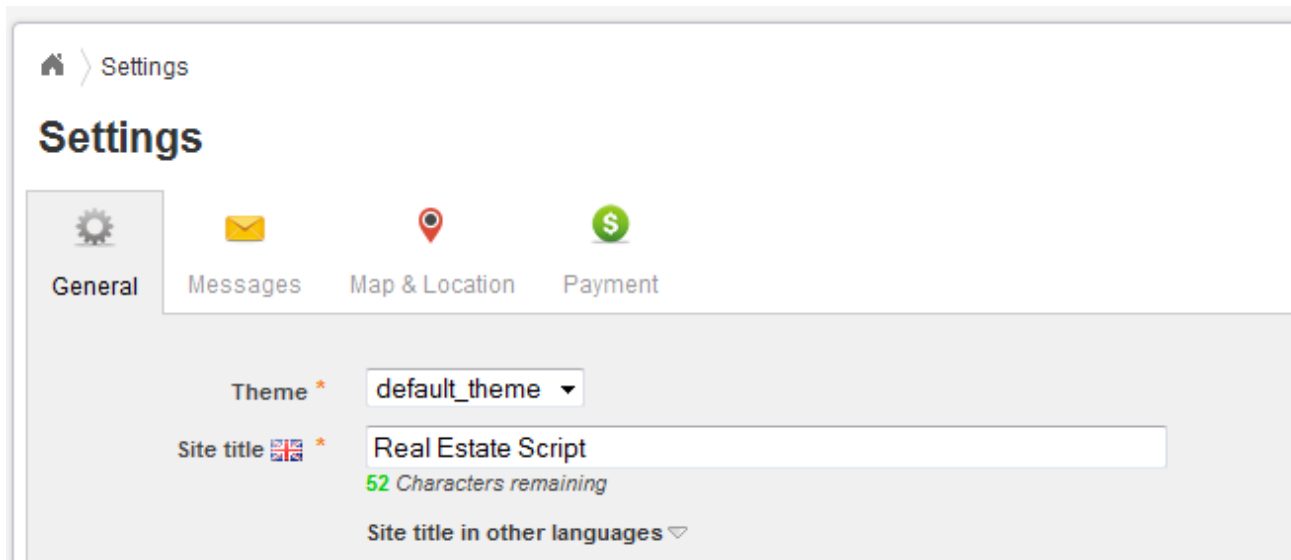

The script is themes based, this means you can make your own theme or modify the default one.

The themes are stored on your server in `/public/themes/` directory.

In order to make a new theme:

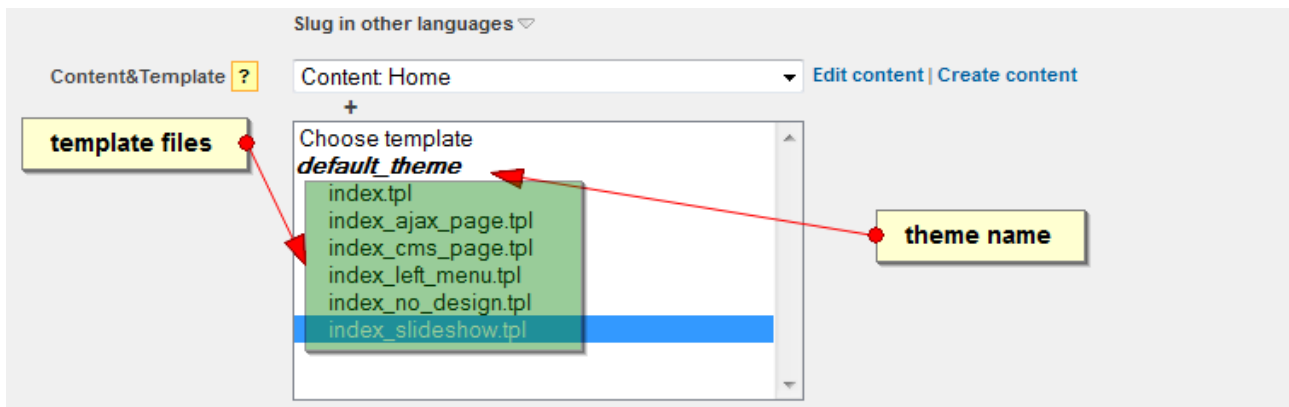

- make a new directory in `/public/themes/` directory for example : `/public/themes/my_theme`
- copy the content from `/public/themes/default_theme/` to your new created directory `/public/themes/my_theme`

In order to use the new theme, you'll have to activate it from : `/admin area / tools & settings / general /`

Notes:

- before using the new theme clear the : `/cache` folder and `/public/themes_c/` folder. (the script will try to do that automatically)
- When you add a new link, and you set the template be sure you select it from the correct theme folder.

2) Theme structure

The theme is structured in 4 main directories:

/css – directory contains theme's css files

/images – directory contains theme's images files

/js – directory contains theme's js files.

/tpls – directory contains the tpl files.

3) Templates

The script uses the Smarty template engine. If you're not familiar with the concept of templates or Smarty take a look on this site :

<http://www.smarty.net/manual/en/>

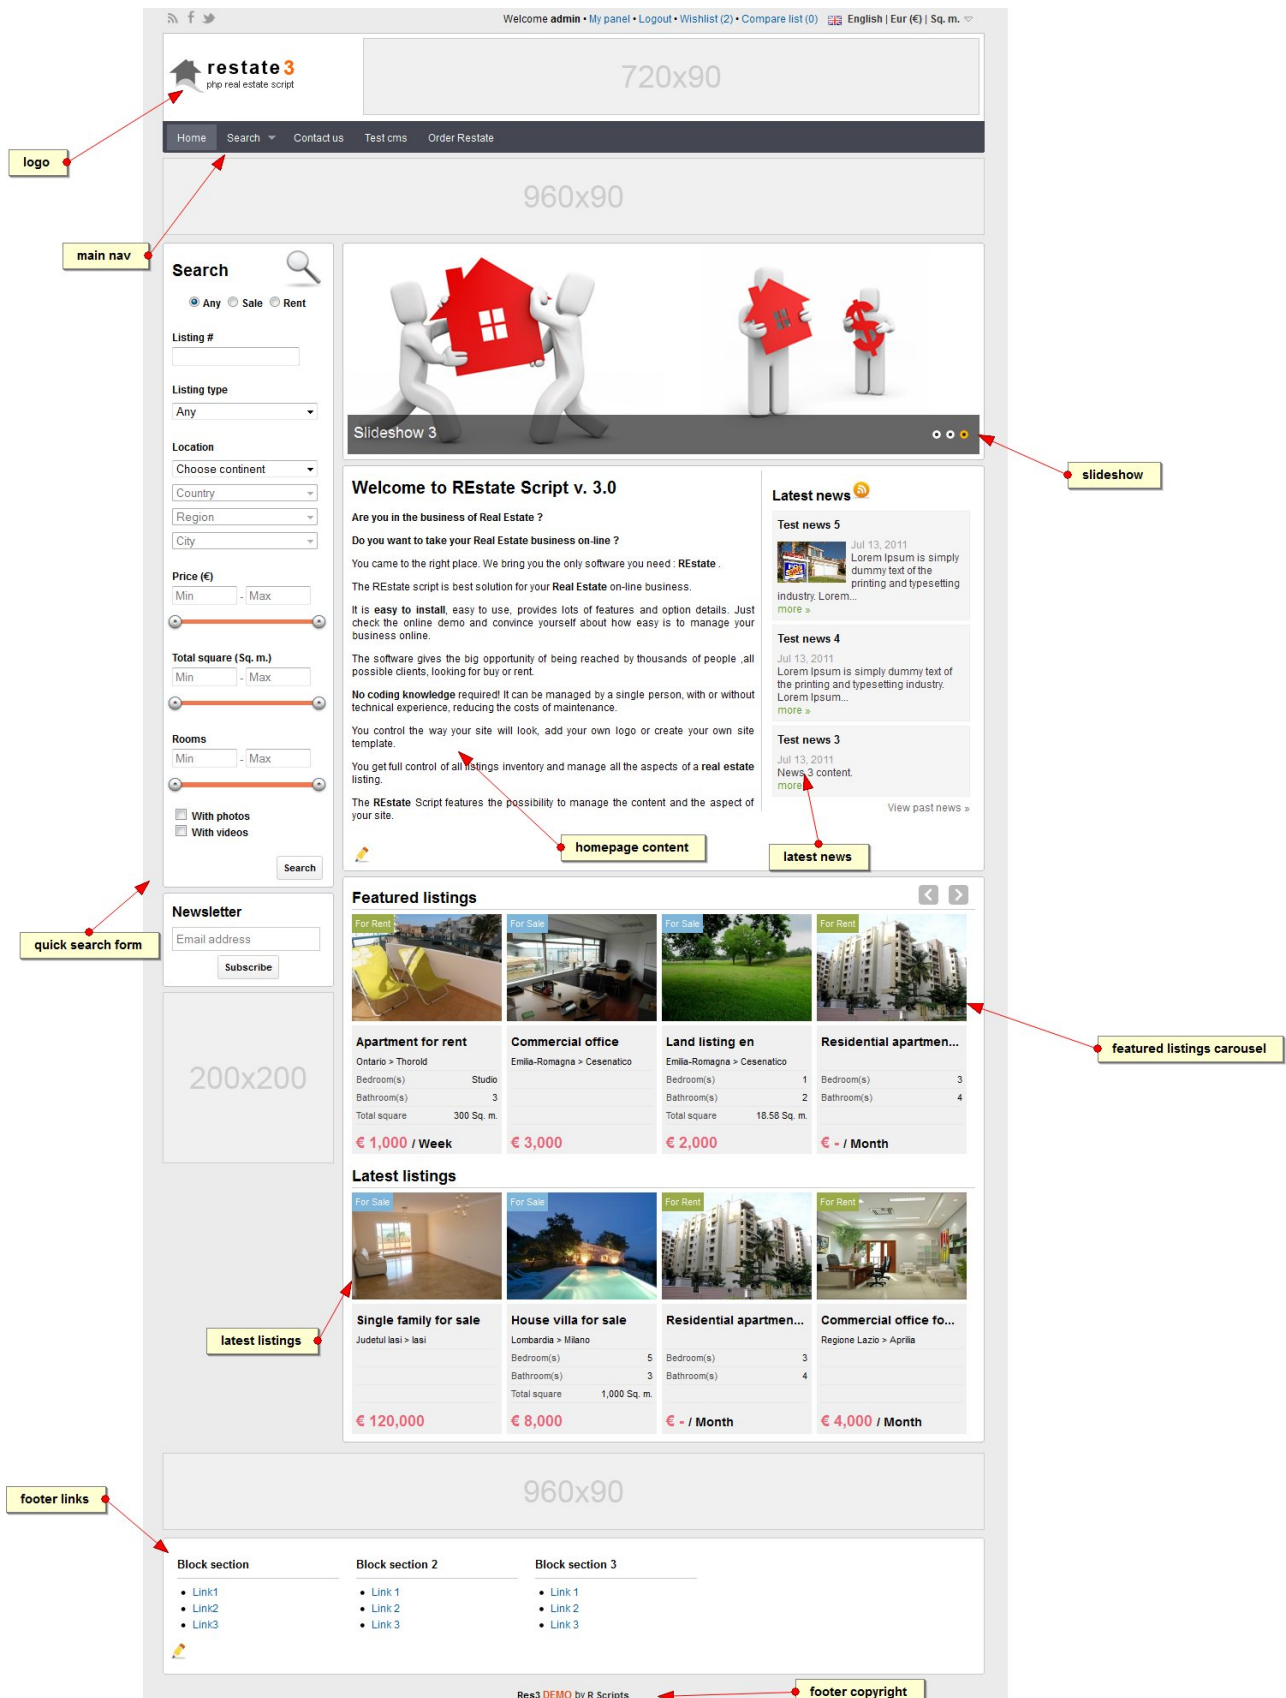

The templates are located on each theme in /tpls directory, so on the default theme it will be located in : /public/themes/default_theme/tpls/ directory.

The templates files contain pieces of xhtml code + template variables (which make the connection between design and the script code).

The template variables are always included between „{„ and „}” brackets.

For example : {`$this_is_a_variable`}

Try not to delete these variables or the site or some functionality will not work.

Logo – the logo is located in this file:
/public/themes/default_theme/images/logo.png
make your version of logo and overwrite the default one.

The logo is called from the following template file:
/public/themes/default_theme/tpls/box_header.tpl

in this template are also displayed the top right links : Login, Signup, Language switch, Currency switch, Wishlist, Comparelist.

Main menu –the main menu template is located in default theme in this file:
/public/themes/default_theme/tpls/main_nav.tpl
The main nav style can be changed from:
/public/themes/default_theme/css/style.css
and from
/public/themes/default_theme/css/plugin.superfish.css

Slideshow – the slideshow template is located in this file:
/public/themes/default_theme/box_slideshow.tpl

the slideshow images can be managed from : /admin area / simple cms / manage adverts.

The css for the slideshow is located in
/public/themes/default_theme/css/s_home_slideshow.tpl

Quick search form – the quick search form and any other form is stored in the the /tpls/forms/ directory.

So the quick search form template is located in this file :
/public/themes/default_themes/tpls/form/form_quick_search.tpl

Featured, popular and latest listings – cause these are related to properties, these will be located in the /tpls/properties/ folder like any other property template.

So :

- featured listings template is located in :
/public/themes/default_theme/tpls/properties/grid_featured_listings.tpl
- latest listings template is located in :
/public/themes/default_theme/tpls/properties/grid_latest_listings.tpl

Footer links – the footer links templates is located in :
/public/themes/default_theme/tpls/box_footer.tpl
The footer links can be managed from admin area.

As you can see ... the page design was splitted into parts for easy management. Now..in order to be displayed all these pieces have to be added together into a big template or a framework template.

Usually the framework templates are located in : /tpls folder and have the name starting with : index_ .

The homepage main template is located in :
/public/themes/default_theme/tpls/index_slideshow.tpl

You'll notice in these kind of templates lot of calls like :
{include file="template_name.tpl"} this means that you load in the current template other templates content.

We left the "**home page content**" and "**news**" cause these are loaded in this template.

Home page content: is loaded by the script with this template variable:

{ \$content }

if you remove this variable...you'll notice that the home page content will dissapear.

The Home page content can be managed from admin area / simple cms / edit the the homepage content.

On our demo site the link to it is like this :

<http://www.realestatescript.eu/demo/admin/content/edit/1/>

News: the news template is located in this file:
/public/themes/default_theme/tpls/news/latest_news.tpl

and these news are loaded in the homepage with the following line :

{include file="\$theme/tpls/news/latest_news.tpl"}

There rest of the script's pages work similar. The main template for property details is : index_details.tpl, the main template for search results is : index_search.tpl, etc.

4) CSS and Jscript files

The main css file for default theme is located in :

/public/themes/default_theme/css/style.css

The css and jscript files are loaded on demand and are combined for performance reasns.

The next part is for advanced users that have xhtml, css, jscript, php knowledge.

If you'll check the page source you'll notice this line :

```
<link rel="stylesheet" href="http://www.realestatescript.eu/demo/combine.php?theme=default_theme&type=css_min&assets=home/index" type="text/css" />
```

this means that all the css files used for this page are grouped and combined into a single file (for performance reasons).

How the css / jscript files are called ?

The best way to figure it is to check the combine config file:

/private/config/combine_front.php

Each page and it's css / jscript file is commented ... for example the homepage will look like this:

```
// HOME
//-----

$combine['home/index'] =
array_merge_recursive( $combine['global_front'],array(
    'global'=>array(
        'plugin.tabs.js',
        'plugin.tabs.slideshow.js',
        'jquery.ui.core.min.js',
        'jquery.ui.widget.min.js',
        'jquery.ui.mouse.min.js',
        'jquery.ui.slider.min.js'
    ),
    'theme'=>array(
        'jquery.ui.css',
        'jquery.ui.slider.css',
        's_home_slideshow.css',
        's_search_results.css',
        'plugin.jcarousel.js',
        's_jcarousel_home.css',
        'search.js'
    )
));
```

The files from the array with the key **"global"** are global css/jscript files.

The global css or jscript files can be used anywhere in the script, they are not theme based and are located in :

/public/css and /public/js folders. Usually the global css/jscript files contain 3rd party plugins or helpers.

The files from the array with the key **"theme"** are theme css/jscript files .

G. Google Analytics code

The Google Analytics code can be added in the following template:

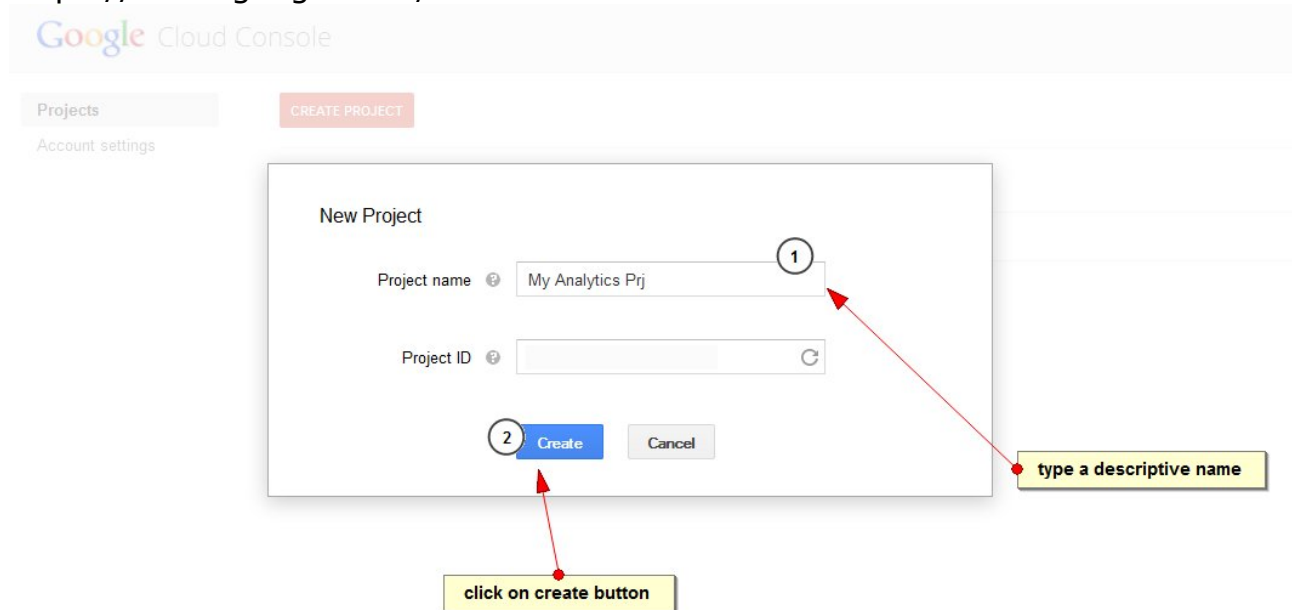

/public/themes/default_theme/tpls/header.tpl before the '</head>' template.

The admin area uses the Google Analytics info and display them in dashboard / "Visits" tab.

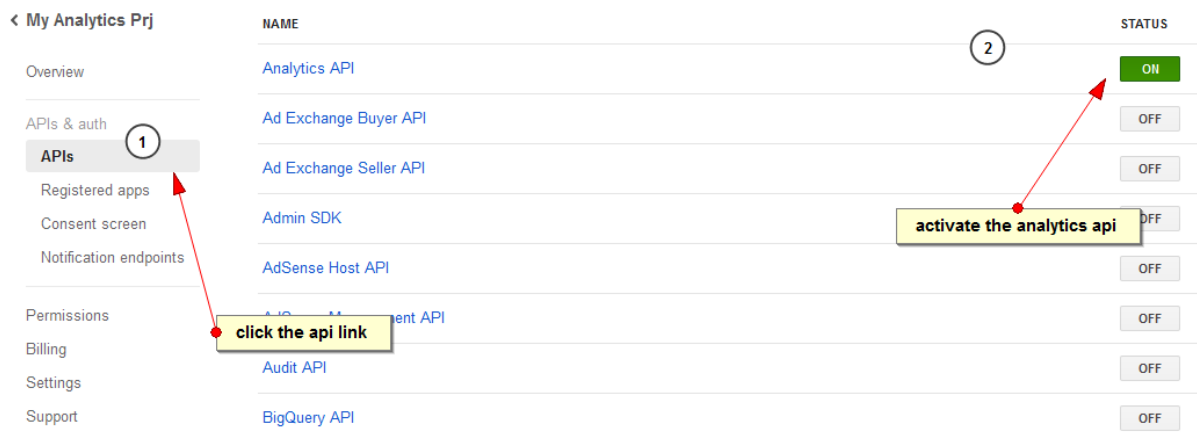

In order to activate these statistics you'll need to make some settings

a. Create a new project on Google Cloud console

<https://cloud.google.com/console>

b. Enable the Analytics API

c. register an application

The screenshot shows the 'Register new application' page in the Google Cloud Console. The left sidebar has a menu with 'Registered apps' highlighted. The main form has the following fields and annotations:

- Name:** 'My Analytics App' (Annotation 2: 'add a sugestive name')
- Platform:** Radio buttons for 'Web Application' (selected), 'Android', 'iOS', 'Chrome', and 'Native'.
- Register button:** A blue button with the text 'Register' (Annotation 1: 'click to register an application', Annotation 3: 'click on register button').

Annotations are numbered 1, 2, and 3 in circles. Annotation 1 points to the 'Register' button. Annotation 2 points to the 'Name' field. Annotation 3 points to the 'Register' button.

d. Click on "OAuth 2.0 Client ID" in order to expand the section.

The screenshot shows the 'My Analytics App' configuration page. The 'OAuth 2.0 Client ID' section is expanded, showing the following fields and buttons:

- Download JSON:** A button to download the client ID configuration file.
- CLIENT ID:** A text field containing a long alphanumeric string.
- CLIENT SECRET:** A text field containing a long alphanumeric string.
- CONSENT SCREEN:** A section with an 'Update' button.
- WEB ORIGIN:** A text field containing 'https:// or http://'.
- REDIRECT URI:** A text field containing 'https:// or http://'.
- Generate:** A blue button to generate the client ID and secret.

Copy the CLIENT ID (xxxxxxxxxxxxx.apps.googleusercontent.com) in the config file /private/config/config_app.php this line:
`$config['ga_client_id'] = 'your client id here';`

e. Click on "Certificate" in order to expand the section.

My Analytics App
Web Application

Use the controls below to set up your application's authorization credentials.

▶ OAuth 2.0 Client ID
Access user data via a consent screen

▼ Certificate
Access application-specific data that comes from a server

Download JSON

EMAIL ADDRESS

PUBLIC KEY FINGERPRINT

Generate New Key

Certificate Generated

The certificate was successfully generated.
Download your private key now and store it securely. This is the only chance to download the private key.
Your private key's password is **notasecret**. You must present this password to use this key.

Download private key View public key

▶ Server Key
Access data that comes from a server, and that is not associated with an account

▶ Browser Key
Access data that comes from a browser, and that is not associated with an account

- Click on **"Generate new key" button** and then on **"Download private key" button**.

- **Download the .p12 file** and upload it on your server in /private/libs/google_analytics/ folder.

- **Copy the .p12 filename** into /private/config/config_app.file on this line:

```
$config['ga_private_key_file'] = 'your_private_key_file_name_here.p12';
```

- **Copy the EMAIL ADDRESS** (xxx-xxx@developer.gserviceaccount.com) into /private/config/config_app.php (this email will be used on analytics side also, please check point **f.**) on this line:

```
$config['ga_email'] = 'your email here';
```

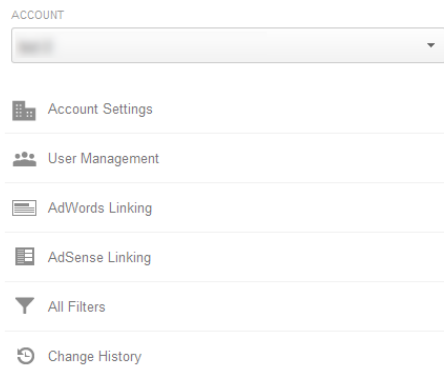

f. Login to Analytics

<http://www.google.com/analytics/>

- Click on "Admin" link.

- select an account and click on „User management” link

- in the "Add permissions for" field fill in the email address from point **e**.

(xxx-xxx@developer.gserviceaccount.com)

*Note: this process has some delay, please wait for 5 minutes then proceed to step **g**.*

g. The last step is to find the account id.

Open: http://your_site.com/admin/ajax_analytics/ga_account_id

If everything is set correctly you should see a message like:

*www.your_site.com has account id **ga:xxxxxxx***

Copy the account id into /private/config/config_app.php this line:
`$config['ga_account_id'] = 'ga:your account id here';`

h. Finally, if all set correctly in the dashboard/visits tab you should see now the analytics statistics like in the picture:

H. FAQs

Q. Can i get a non-encrypted version of the script?

A. No, sorry. The script source code is Ioncube encrypted in order to avoid code alteration, and the script sourcecode is not for sale.

Q. Can i use same license on multiple domains ?

A. No, the script license is for 1 domain only. This means if you purchased the script for domain A.com you cannot install and use it on B.com.

However, the license domain can be changed, but only once.

This means that, if you purchased the license for domain A.com and you change your mind and you want to use it on B.com, you'll be able to make this change.

Q. What is the price if i want to buy multiple licenses ?

A. Our discount schema is like this:

1st license : 0% discount

2 – 5 licenses : 20% discount

6 – 10 licenses : 30% discount

11+ : 50% discount

Q. Do you offer support by phone/chat ?

A. No, not at this time. Due to time zone differences with some of our clients and availability of qualified support staff we decided to perform email- based support only.

Q. What is the response time for Email support?

A.The maximum response time for support-related issues is 48 hours due to workload/time zone difference.

- The average period of support response is 12 hours.
- **In case you have not received any reply to your request after 48 hours, please contact Support again: your email might have been undelivered/killed by spam filters. You can also use your alternative email account on another mail server.**

Q. How soon can i download the software after payment?

A. Download links are available once an order has been approved. For orders placed during (GMT+2) business hours the approval process is usually complete within 1 to 8 hours. Orders placed outside of business hours may still be processed same day, but if not they are given priority processing the next day.

In case you have not received the download link/instructions by email after 48h please contact us on sales[at]realestatescript.eu

Q. How the custom changes work ?

- custom changes can be done only for clients with a valid license.
- If you are a client and you wish custom changes to be done on your basic license, you can send us a list with the custom changes and we'll reply back for each of the items with : can or cannot be done / time & price / working start date.
- Before the working start date, you'll have to pay a 50% deposit (from the custom changes total amount), the rest of 50% when the job is complete and completely checked by you.
- The job is done on your server, in order to be able to update your basic license we'll need the ftp info where the script is installed.

Note: we reserve the right to decline custom changes requests.

Q. When will you release the next version of the script ?

A. We do our best to release each year a new version of the script.

Q. How do i upgrade from RES2 to RES3 and what is the price?

A. **The upgrade means:**

- download and install the new version of the script into a separate folder on your server.
- run a database/photos import tool from res2 to res3.
- when all fine and everything is checked, move the new version's files to res2 installation folder.

Prices:

- free if your support period is not expired.
- 59 euro (+6 months support) if the support period is expired.
