## GLOSSARY GRASS

<b>DM</b> -	Drymatter
<b>Pad</b> -	Paddock
<b>Ha</b> -	Hectares
<b>CM</b> -	Centimetres
<b>Pre DM</b> -	Pre Grazing Drymatter
<b>Post DM</b> -	Post Grazing DM or Residual
<b>Eff</b> -	Effluent
<b>PIC</b> -	Person in charge

## DATA STORAGE GRASS

GrassMate is downloaded from the web and installs on your phone. It then stores its data that you enter on your phone in an area protected from other apps. The industry calls this protection "Sandboxing". Using GrassMate is the only way of seeing this data and if you didn't backup your data you would lose it if/when you lost your phone.

The Mate apps have an Export/Import feature where your data is exported to [www.farmmates.com](http://www.farmmates.com) as backup. (*The farmmates.com server will keep your data for one month after your registration is expired.*) From here you can retrieve your data onto another device or have other members of your team retrieve the data for use on the farm. You will need to use the same login ID & password each time.

You are paying for a registration, not the app on your device, so you are free to use that on as many devices as you wish. e.g. if you have a large farm with 10+ staff then they will all have access to the data with that registration. With this in mind it is recommended that your password is not a personal password but a team appropriate password.

Retrieving data will overwrite ALL the data on your phone with the data on the farmmates.com server. It is recommended that staff or viewers of your data check the "Import on startup" option so they always have the latest version of your data. If you are the person in charge then take care importing if you are unsure which user has last backed up the data. You can use the Undo Import option if the Imported data is not what you were expecting.

Mate Apps although have small files will use mobile data allowance Exporting and Importing. If you have Mobile Data turned off you can export/import using your home Wi-Fi network once in range. This will use your home phone line data allowance (most people have spare) and not your mobile data allowance.

### Export:

Exports entire farm records to Farmmates.com.

### Import:

The Import option imports everything and overwrites whatever is on your phone.

### 'Import on Startup'

If you put info into your phone it automatically sends it to farmmates.com (when connected) then as soon as you restart GrassMate on any phone, and sign in, it looks for the backup copy on server and automatically imports it.

So if a team member does a farm walk with their phone then that automatically is sent to the server. Then when you start GrassMate it downloads the new farm info to your phone.

When you first enter GrassMate you are presented with the Home Screen. Here you can register with farmmates.com, try out GrassMate as a Guest or 'sign in' to use your own details.

Check out which version of Grass-Mate you are running.

You can log in here as a guest to try out GrassMate before you are registered. No data can be saved.

Register button will take you to the registration screen where you can enter you details.

Press Login once you have entered your login ID and password. GrassMate will verify your registration\* then take you to the paddock list screen

\* If no internet access is available you will then have 15 days to use GrassMate before a Login online is required. This enables you to use GrassMate when you need it even if there is no internet access.

Your login ID is entered here. You choose this in the 'Register' screen. *(Case sensitive)*

Your password is entered here. You choose this in the 'Register' screen also. *(Case sensitive)*

Select Auto login to skip through this screen automatically next time you enter GrassMate.

If Import on startup is checked then each time you enter Grass-Mate it will look on the web for a backup copy of your farm data. This is good for staff who always need the latest data from the person in charge of grass management.

# Paddock List GRASS

Once logged in the Paddock list is displayed showing your farm data, sorted by whatever you had sorted previously. The 7 icons at the bottom act like a menu for going to different screens.

The Home button returns you to the Home screen.

Farm data displaying Paddock #, hectares, latest DM, last graze date and days since last graze.

Tap the number of the highlighted paddock to automatically go to the Grazing Entry screen. If Default values are set with auto entry & exit GrassMate will do all the work

Greyed out DM value indicates the paddock has been grazed since the DM reading so the DM is now historical. If you enter a residual with the grazing the residual DM will display here.

Total effective hectares of the farm

Average farm cover in DM/Ha

Goes to the walk entry screen.

Goes to the DM graph screen.

Goes to the farm setup screen.

Round calculator or DM calculator.

Goes to the fertiliser applications screen.

Goes to effluent irrigator records screen.

Goes to the grazing entry screen.

Import/Export Message.

Export/Import your data from farmmates.com. If a team member has changed the data and exported it, you can Import it here.

Select either Pad, DM or Days to sort table .

Crop paddocks indicated by orange /yellow/golden highlight. They are also sorted to the bottom when sorting by Days.

Effluent paddocks are highlighted green.

Average of the days since grazing of 5 paddocks grazed the earliest.

Last grazing entered

# WALK ENTRY GRASS

The back button returns you to the paddock list and gives you an option to Write Walk file. A Walk File is a record of all the paddocks DM, kept as a diary entry and is used for comparison in the DM Graph. Write the file once all data has been entered. If you do not write the file your DM data will be lost the next time you enter DM. GrassMate will export farm to farm-mates.com

Important: When writing the file it looks for all entries on the date selected. All other entries are ignored.

Walk date. Important: Ensure this is set BEFORE you start entering data. Changing this date mid walk will only change the date for subsequent entries.

Currently selected paddock. Select from the paddock grid.

Enter DM here

Enter CM here.

Toggle between entering DM or CM

Formula to calculate DM from CM.

Walk Entry screen is used to enter the DM readings of your farm.

Import your walk data from an electronic pasture meter. (See next page)

Paddock list showing DM from a previous walk (in grey) or current (in black)

Select a paddock and use these arrow keys to change the paddocks walk order.

Keypad for entering numbers

Save the DM entered for the paddock selected and go to the next paddock in the walk order.

Skip this paddock for now

Enter paddock as currently in crop.

## Import Walk Instructions

1. Export your data from your PC software. Either .csv or .xls file type.
2. Open the file in Excel. Select/highlight the cells containing Pad, Ha, DM columns and copy (*Ctrl-C or Ctrl-Ins*) this to the clipboard\*. (*Columns may need to be moved if your software does not export in Pad,Ha,DM order. Please do not email farmmates support for NON-farmmates software help. You may send your data email and I can verify if it is correct or not*)
3. In your email program 'paste' (*Ctrl-V or Shift-Ins*) the copied data from the clipboard into a new email message and send it to an email address your phone can view. (*Note: You can send an email to yourself if your phone checks your email.*)
4. In your phone's email, from the message you sent yourself select all the data (*long press on iPhone*) and copy to phone's clipboard.
5. In GrassMate's Import Walk screen, paste the copied data into the box labelled "Paste import walk data here."
6. Convert the data if necessary (See note opposite).
7. Press Verify to check all is OK. (*If not, try changing the Data Separator. The space between data may be a tab etc*)
8. Press Import if data is correct.

\* A place in your computer's memory used to temporarily hold information.

Once your data is verified you will see it appear here in the verified grid.

If your data verifies OK and it looks good in the verified grid press Import to import.

Press Verify to check your data and display it in the verified grid in the bottom left.

The back button.

## WALK DATA IMPORT GRASS

This screen imports data from your PC. The data is 'Copied' from an email, sent to your phone, containing data exported from your PC.

**WARNING!** This is a complex operation and will need a degree of computer literacy to understand what you are achieving here but once mastered is very easy and quick.

Brief reminder of instructions. See opposite.

This is where you paste the data from the email you sent to your phone in "Pad,Ha,DM" format.

If your data ends up in a vertical format eg

```
1
1.2
3421
2
2.1
1584
```

you can convert it to linear format

```
1 1.2 3421
2 2.1 1584
```

Select whether your data is separated by a comma, space or a tab.

Check this box to create the paddock if it does not exist. Usually only the first time you import.

Toggle between graph view and table view.  
(Table view has the option of deleting a walk )

The back button returns you to the paddock list.

Individual paddock DM results in  
DM descending order.

Average farm cover for the walk.

Select walks from a list of all available written walk  
files.

View current DM and historical walk (Saved with 'Write file'  
when exiting walk entry screen.) in graphical DM order or  
table order.

Sexy GrassMate logo

Trend line

Black line shows the graph results  
of the previously view graph

Average growth recorded for the  
walk at the time the file was  
written.

# CALCULATORS GRASSMATE

3 calculators; A spring rotation planner, DM demand and a DM calculator

Ha/Day that is grazed at currently selected round length

Start & finish round info. You can use the arrow keys to change date and days

Type in Mob name, size and DM/cow/Day.

Type in available Ha to calculate demand/ha/day.

Mob name	Mob size	DM/Day
Heifers	43	6
Calves	95	5

Enter mob name here

Available Ha: 18, Demand DM/Ha/Day: 40.72

Goto Round calculator

Type in the paddock # or Ha to calculate.

Enter Pre grazing DM and Post DM (Residual)

Cows grazing

Type either DM/Cow or days in the Ha. GrassMate will calculate the other cell.

Grass & Supplement Total DM/Cow

Back to paddock list

To Demand calculator

Type in total DM/day for the feed or DM/Cow. GrassMate will calculate the other cell

Paddock #: 1.2, DM/Ha: 2,300, Residual: 1,200, Cows: 55, Days: 4, Grass DM/cow: 6

Supplement: Grass silage (200), Supplement 2 (0), Supplement 3 (0)

Total DM or DM/Cow: 3.64, 0, 0

Supplement total: 200, 3.64

DM/Cow: 9.64

## How to use Applications screen.

Create a New application with a recognisable name eg Urea Jul 12 or Pasture Kleen Jun 12

Select the application window eg. You may want fert on all paddocks grazed between day 0 and 25 if on a 40 day round.

GrassMate will display the paddocks that have been done already, paddocks that are outside the window in the Can't column and paddocks in the application window in the Can column.

Hit the Done arrow to record an application with the rate and date set at the bottom of the screen.

When Can & Can't columns are empty you have finished the application.

## APPLICATIONS

Use this screen to determine which paddocks are suitable for applying fertiliser, spray or any round dependant application.

- Skip paddocks. Moves to Done column but records no date or rate.
- Paddock inside application window
- Paddock outside application window
- Paddock data
