Buttons and Functions

Warning

STEAM Rhino battery MOD products are intended for use by adults only. Please keep all components away from children or pets. Improper use or modification of this device is prohibited and could cause risk.

Electronic Cigarette products are not intended for use by non smokers, persons of illegal smoking age, women who are pregnant or breastfeeding, or persons with or at risk of heart disease, high blood pressure, hypertension, diabetes, or taking medicine for depression or asthma. Consult a physician if you are experiencing any sign of discomfort from using electronic cigarettes and stop using this product immediately.

Features

- 5~60W Wattage Adjustable
- 3~10V Voltage Adjustable
- Supports Sub Ohm Atomizers to 0.2Ω
- Short Circuit protection
- Temperature monitoring protection 70°
- Circuit Overload Protection
- Battery Low Voltage Protection
- Atomizer Short protection
- Pass-Through Micro USB port to charge the battery and use the device simultaneously.

Charging the Device

A Micro USB port is located on the bottom of the RHINO. This pass through port allows you to charge your battery and use the device at the same time.

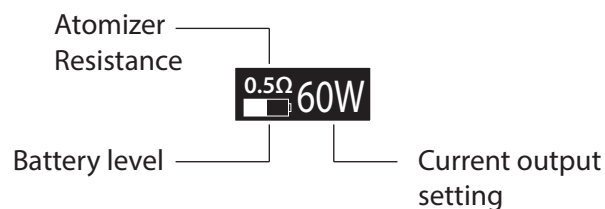

A high transfer Micro USB cable is included with your new RHINO unit.

The 18650 battery inside can also be removed to charge separately using a quality 18650 Li-Ion charger, if desired.

For best performance, we strongly recommend using the high output 18650 batteries supplied with the device, or other high quality 18650 batteries with equivalent performance .

Main Screen (Vape Ready)

This is the main screen displayed when you vape (unless turned OFF). The main screen shows some of the most notable information you will need.

Navigating Around the Menu

To enter menu, click on the **Vape** button 3 times within 1 second. You should see

1 System
ON/OFF

There are 5 selections in the menu. Use the **Up** or **Down** button to scroll to the previous or next selection. Once the selection is shown on the OLED screen, click on the **Vape** button to enter the selection, then use the **Up** or **Down** button to change the setting. Click on the **Vape** button again to confirm the setting.

If no activity on the buttons for 3 seconds, the system will automatically resume to Vape Ready status (Main screen).

Menu Selections

1 System
ON/OFF

This function turns the system ON and OFF. If turned OFF, the **Vape** button will not respond in Vape Ready status.

2 Display
ON/OFF

This function turns the OLED display ON and OFF. When the display is turned OFF, nothing will show on the OLED display when the **Vape** button is pressed during vaping.

3 Wattage
Voltage

This function allows you to switch between Voltage mode and Wattage mode. Once mode is set, the Main Screen will indicate the current value set in Voltage or Wattage. You can use the **Up** or **Down** button to adjust the value.

4 Puff
Record

This function indicates the puffs you have taken since the last reset. To reset the puff record, click on the **Up** or **Down** button once the puff number is shown, when screen shows **Clear**, press the **Vape** button to reset the puff counter to 0.

Exit

This function allows you to exit the menu to Vape Ready mode. No activity on the buttons for 3 seconds will also exit the menu.

Lock and Unlock Up/Down Button

To prevent the **Up** or **Down** button from being pressed accidentally, you can lock the **Up** and **Down** buttons by pressing both buttons simultaneously for 3 seconds.

To unlock the **Up** and **Down** buttons, press both buttons again for 3 seconds to unlock.

When the **Up** and **Down** buttons are locked, the **Vape** button will remain functional.

Quick Shut Down

System shut down is useful when you are not vaping for a longer period of time, or carrying the device in your pocket.

To quickly shut down the system, press the **Vape** button and the **Down** button simultaneously for 3 seconds.

To switch the system back ON, press the **Vape** button and the **Down** button simultaneously again for 3 seconds.
