Product Warranty (2 years)

Advantech warrants to you, the original purchaser, that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products which have been repaired or altered by persons other than repair personnel authorized by Advantech, or which have been subject to misuse, abuse, accident or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most of our customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced at no charge during the warranty period. For out-of-warranty repairs, you will be billed according to the cost of replacement materials, service time and freight. Please consult your dealer for more details.

If you think you have a defective product, follow these steps:

- Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages you get when the problem occurs.
- 2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
- 3. If your product is diagnosed as defective, obtain an RMA (return merchandise authorization) number from your dealer. This allows us to process your return more quickly.
- 4. Carefully pack the defective product, a fully-completed Repair and Replacement Order Card and a photocopy proof of purchase date (such as your sales receipt) in a shippable container. A product returned without proof of the purchase date is not eligible for warranty service.
- 5. Write the RMA number visibly on the outside of the package and ship it prepaid to your dealer.

Part No. 2006302610 Printed in China Edition 1 October 2012

Declaration of Conformity

FCC Class A

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Caution! There is a danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open, or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

A Message to the Customer

Advantech Customer Services

Each and every Advantech product is built to the most exacting specifications to ensure reliable performance in the harsh and demanding conditions typical of industrial environments. Whether your new Advantech equipment is destined for the laboratory or the factory floor, you can be assured that your product will provide the reliability and ease of operation for which the name Advantech has come to be known.

Your satisfaction is our primary concern. Here is a guide to Advantech's customer services. To ensure you get the full benefit of our services, please follow the instructions below carefully.

Technical Support

We want you to get the maximum performance from your products. So if you run into technical difficulties, we are here to help. For the most frequently asked questions, you can easily find answers in your product documentation. These answers are normally a lot more detailed than the ones we can give over the phone.

So please consult this manual first. If you still cannot find the answer, gather all the information or questions that apply to your problem, and with the product close at hand, call your dealer. Our dealers are well trained and ready to give you the support you need to get the most from your Advantech products. In fact, most problems reported are minor and are able to be easily solved over the phone.

In addition, free technical support is available from Advantech engineers every business day. We are always ready to give advice on application requirements or specific information on the installation and operation of any of our products.

	1 LPT cable	P/N: 1700002223
	1 four-port USB cable	P/N: 1700014398
•	1 power converter (connected from peripheral power connector on power supply to PWR1 on board)	P/N: 1703040100

1 warranty card

If any of these items are missing or damaged, contact your distributor or sales representative immediately. We have carefully inspected PCE-3026 mechanically and electrically before shipment. It should be free of marks and scratches and in perfect working order upon receipt. As you unpack PCE-3026, check it for signs of shipping damage. (For example, damaged box, scratches, dents, etc.) If it is damaged or it fails to meet the specifications, notify our service department or your local sales representative immediately. Also notify the carrier. Retain the shipping carton and packing material for inspection by the carrier. After inspection, we will make arrangements to repair or replace the unit.

Chapter

Hardware Configuration

1.1 Introduction

PCE-3026 is a PICMG 1.3 half-size system host board which is designed with Intel® H61 PCH for industrial applications that need high computing power in compact-sized systems. PCE-3026 supports 22 nm manufacturing technology, LGA1155 socket Intel® Core™ i7/i5/i3, and Pentium® and Celeron processors with integrated graphics and support for DDR3 1066/1333 MHz SDRAM up to 8 GB. By supporting advanced computing technology, PCE-3026 is a very cost-effective embedded solution for high performance compact systems.

PCE-3026 performs excellent graphic processing capability through its integrated Intel® HD Graphics graphics core. In addition, PCE-3026 supports VGA+DVI dual display and SG mode. If VGA expansion is installed, PCE-3026 can support more than two display interfaces. These two features enhance the display capability, and satisfy display applications in video walls, AOI, or medical computing.

PCE-3026 also has rich I/O interfaces, and it can support Advantech PCE-3BXX backplanes with expansion slots such as PCIe and PCI. PCE-3026 supports two GbE LAN, eight USB 2.0, three SATA 2.0, and up to two RS-232 and four RS-422/485 ports for general industrial applications. With flexible I/O and graphic capability, PCE-3026 can be an cost effective graphic or I/O oriented desktop platform. With outstanding performance and exceptional features, PCE-3026 is the ideal compact system solution in advanced industrial applications.

1.2 Features & Benefits

Features	Benefits
PCE-3026 Supports Intel 3rd and 2nd Generation processors	Intel's 3rd and 2nd generation Core i7/i5/i3/Pentium/Celeron processor cores with quad/dual-core computing power bring quantum-leap performance improvement.
PCE-3026 supports DDR3 1066/1333 SDRAM up to 8 GB	The feature provides higher memory data transmission and processing efficiency, bringing higher system performance.
Compact size	PCE-3026 is compliant with PICMG 1.3 Half-size specification. The size is only 167.64 mm x 126.39 mm (6.6" x 4.98")
Fully supports Advantech SUSI APIs and Utilities.	Reduces customer's S/W development effort with more reliable S/W quality, also it provides value-added utilities such as system monitor and Embedded Security ID.
USB type A connector support	PCE-3026 support one type A USB connector on board for dongle devices. This enhances information security.

1.3 Specifications

1.3.1 **System**

- CPU: LGA1155-socket Core i7/i5/i3, Pentium and Celeron series processors
- **L2 Cache**: Please refer to processor support list for detailed information
- BIOS: AMI SPI BIOS (64 Mb SPI)
- System Chipset: Intel H61
- SATA hard disk drive interface: 3 x SATA 2.0 (300 MB/s)

Note! PCE-3026 does NOT support PATA(IDE) interface.

1.3.2 Memory

■ RAM: Up to 8 GB in two 204-pin SO-DIMM sockets (4 GB per DIMM). Supporting Dual channel DDR3 1066/1333 MHz SO-DIMM (Non-ECC)

1.3.3 Input/Output

- Backplane Support: PCE-3BXX
- Enhanced parallel port: This EPP/SPP/ECP port can be configured to LPT1, LPT2, LPT3 or disabled
- Serial ports: Two RS-232 serial ports on board. Four RS 422/485 serial ports supported by optional COM module via low pin count connector (P/N: PCA-COM485-00A1E)
- PS/2 keyboard and mouse connector: One 6-pin mini-DIN connectors is located on the mounting bracket
- **USB port:** Supports 8 USB 2.0 ports with transfer rate up to 480 Mbps. (6 on board, 1 on rear I/O, 1 Type A USB on board.)

1.3.4 Graphics

- Controller: Intel® HD Graphics embedded in the processor
- **Display memory:** Shared memory is subject to OS
- CRT: Resolution can be up to 2560 x 1600
- **DVI**: Resolution can be up to 1920 x 1080 (Please place order on optional DVI cable: 1700008822)
- PCI express x16 slot on the backplane: An external graphic card can be installed in the PCI-E x 16 slot for stronger 2D/3D graphic capability

1.3.5 Ethernet LAN

- Supporting dual 10/100/1000 Mbps Ethernet port via the dedicated PCI Express x1 bus which provides 500 MB/s data transmission rate
- Controller:
 - LAN 1: Intel® 82579V (PHY)
 - LAN 2: Intel® 82583V

1.3.6 Industrial features

■ **Watchdog timer:** Can generate a system reset. The watchdog timer is programmable, with each unit equal to one second or one minute (255 levels).

1.3.7 Mechanical and environmental specifications

■ Operating temperature: 0 ~ 60° C (32 ~ 140° F, Depending on CPU)

■ Storage temperature: -40 ~ 85° C (-40 ~ 185° F)

■ Humidity: 20 ~ 95% non-condensing

Power supply voltage: +3.3 V, +5 V, +12 V, +5 V_{SB}

Power consumption:

Voltage (V)	3.3	5	12	5VSB
Current (A)	1.54	1.05	3.8	0.24
Power consumption (W)	5.173	5.304	45.866	1.203

■ Test condition:

CPU: Intel Core i5-2400 (3.1 GHz)Memory: DDR3 1333 4GB *2

■ Board size: 167.64 mm (L) X 126.39 mm (W) (6.6" x 4.98")

■ Board weight: 0.33 kg

1.4 Jumpers and Connectors

Connectors on PCE-3026 system host board link it to external devices such as hard disk drives and a keyboard. In addition, the board has a number of jumpers used to configure your system for your application.

The tables below list the function of each of the board jumpers and connectors. Later sections in this chapter give instructions on setting jumpers. Chapter 2 gives instructions for connecting external devices to your motherboard.

Table 1.1: Jumper list	
Label	Function
JCMOS1	CMOS clear
JOBS1+JWDT1	Hardware monitor alarm+watchdog timer output selection
BZ1	Buzzer setting
KL1	Keyboard lock

Table 1.2: Connectors		
Label	Function	
LPT1	Parallel port, supports SPP/EPP/ECP mode	
LAN1	Intel® 82579V	
LAN2	Intel® 82583V	
VGA1	VGA connector	
KBMS1	External keyboard/mouse connector	
COM12	Box header for RS-232*2	
JIR1	Infrared connector	
FP1	Power Switch / Reset connector	
JCASE1	Case Open	

CPUFAN1	CPU FAN connector (4-pin)
LANLED1	LAN1/2 LED connector
HDAUD1	HD audio extension module connector
USB12	USB port 1, 2
USB34	USB port 3, 4
USB56	USB port 5, 6
USB7	USB port 7
USB8	USB on rear I/O
SATA1	Serial ATA1
SATA2	Serial ATA2
SATA3	Serial ATA3
CPU1	CPU Socket

1.7 **Safety Precautions**

Warning! Always completely disconnect the power cord from your chassis whenever you work with the hardware. Do not make connections while the power is on. Sensitive electronic components can be damaged by sudden power surges. Only experienced electronics personnel should open the PC chassis.

Caution! Always ground yourself to remove any static charge before touching the motherboard. Modern electronic devices are very sensitive to static electrical discharges. As a safety precaution, use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis.

Caution! The computer is provided with a battery-powered Real-time Clock. There is a danger of explosion if battery is incorrectly replaced. Replace only with same or equivalent type recommended by the manufacturer. Discard used batteries according to manufacturer's instructions.

Caution! There is a danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

1.8 Jumper Settings

This section provides instructions on how to configure your motherboard by setting the jumpers. It also includes the motherboard's default settings and your options for each jumper.

1.8.1 How to set jumpers

You can configure your motherboard to match the needs of your application by setting the jumpers. A jumper is a metal bridge that closes an electrical circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To "close" (or turn ON) a jumper, you connect the pins with the clip. To "open" (or turn OFF) a jumper, you remove the clip. Sometimes a jumper consists of a set of three pins, labeled 1, 2 and 3. In this case you connect either pins 1 and 2, or 2 and 3. A pair of needle-nose pliers may be useful when setting jumpers.

1.8.2 BIOS CMOS (JCMOS1)

PCE-3026 CPU card contains a jumper that can erase BIOS CMOS data and reset the system BIOS information. Normally this jumper should be set with pins 1-2 closed. If you want to reset those data, set JCMOS1 to 2-3 closed for just a few seconds, and then move the jumper back to 1-2 closed. This procedure will reset the CMOS to its last status or default setting.

Table 1.3: Clear BIOS CMOS (JCMOS1)			
Function	Jumper Setting		
*Keep BIOS CMOS data	1 2 3 1-2 closed		
Clear BIOS CMOS data	1 2 3 O O O 2-3 closed		
* default setting			

1.8.3 Hardware monitor alarm (JOBS1) and Watchdog timer output (JWDT1)

PCE-3026 contains a watchdog timer that will reset the CPU in the event the CPU stops processing. This feature means PCE-3026 will recover from a software failure or an EMI problem. The JWDT1 jumper settings control the outcome of what the computer will do in the event the watchdog timer is tripped.

PCE-3026 also provide jumper: JOBS1 to enable or disable hardware monitor function.

Table 1.4: H/W monitor alarm and Watchdog timer (JOBS1+JWDT1)			
Function	Jumper Setting		
*Enable watchdog timer	2 4 6 8 10 O O O O O O O O 1 3 5 7 9		
*Enable H/W monitor alarm	2 4 6 8 10 O O O O O D O O O 1 3 5 7 9		
*default setting			

1.9 Keyboard Lock and Buzzer Setting

PCE-3026 provides jumpers for customer to enable keyboard lock and buzzer via hardware settings.

Table 1.5: Keyboard lock (KL1)	
Function	Jumper Setting
*Disable keyboard lock	Open
Enable keyboard lock	Close
* default setting	
Table 1.6: Buzzer setting (BZ1)	
Function	Jumper Setting
Connecting to external speaker	Connect 1 & 4
*Enable buzzer	1 2 3 4

1.10 System Memory

* default setting

PCE-3026 has two 204-pin memory sockets DDR3 1066/1333 MHz memory modules with maximum capacity of 8 GB. (Maximum 4 GB for each DIMM)

Note! PCE-3026 does NOT support registered DIMMs (RDIMMs).

1.11 Memory Installation Procedures

To install DIMMs, first, insert the memory module in the socket.

Then softly push the whole memory into the socket. when a "click" is heard, the installation is successful.

1.12 Cache Memory

CPUs supported by PCE-3026 have 8 MB, 6 MB, 3 MB, 2MB L3 cache memory sizes.

Note! Please refer to Intel CPU data sheet for detail information.

1.13 Processor Installation

Warning! Without a fan or heat sink, the processor will overheat and cause damage to both the processor and the single board computer. To install a processor, first turn off your system.

PCE-3026 is designed for Intel® LGA 1155 socket processors. For the CPU installation process, please follow the steps below.

Pull the handle beside the processor socket outward and lift it.

2. Remove the socket protection cap.

3. Align the cuts on the processor with the edges of the socket.

4. Replace the socket cap; lower the retainer handle and clip it shut.

5. Processor installation is complete.

1.14 Processor Cooler Installation

Purchasing PCE-3026's proprietary CPU cooler from Advantech is necessary. Other brand CPU coolers are NOT compatible with PCE-3026.

Advantech offers a specially designed CPU cooler for PCE-3026 for better heat dissipation efficiency and enhancing rigidity of the CPU card.

Attach the CPU cooler on the CPU card by fastening four screws on the cooler into the steel back-plate on the PCB.

Note the direction of CPU cooler; it must follow that shown below. Installing a CPU cooler in the wrong direction may cause poor heat dissipation and damage the CPU card.

Chapter

Connecting Peripherals

2.1 Introduction

You can access most of the connectors from the top of the board. If you have a number of cards installed, you may need to partially remove a card to make all the connections.

2.2 Parallel Port (LPT1)

The parallel port is normally used to connect the motherboard to a printer. PCE-3026 includes an onboard parallel port, accessed through a 26-pin flat-cable connector, LPT1.

2.3 USB Ports (USB12, USB34, USB56, USB7, USB8)

PCE-3026 provides up to 8 USB (Universal Serial Bus) on-board ports with complete Plug & Play and hot swap support for up to 127 external devices. These USB ports comply with USB Specification 2.0, support transfer rates up to 480 Mbps. USB 1-6 ports are located on board with box header, USB7 is a type A connector, and USB8 is on rear I/O bracket. The USB interface can be disabled in the system BIOS setup.

2.4 VGA Connector (VGA1)

This CPU card has VGA outputs that can drive conventional CRT displays. VGA1 is a standard 15-pin D-SUB connector commonly used for VGA.

2.5 DVI Connector (DVI 1)

DVI 1 is a 20-pin connector, supporting resolution up to 1920x1080. Please place order no. 1700008822 for standard DVI connector on bracket.

2.6 Serial Ports (COM12)

PCE-3026 offers two serial ports. These ports can connect to serial devices, such as a mouse or a printer, or to a communications network. The IRQ and address ranges for both ports are fixed. However, if you want to disable the port or change these parameters later, you can do this in the system BIOS setup.

2.7 PS/2 Keyboard and Mouse Connector (KBMS1)

Two on-board 6-pin mini-DIN connectors (KBMS1) provide connection to PS/2 keyboard. If a Y cable is required, please place an order for no. 1700060202.

2.8 CPU Fan Connector (CPUFAN1)

This connector supports cooling fans of 500 mA (6 W) or less, and it also supports smart fan control when using 4-pin or 3-pin cooler.

2.9 Front Panel Connectors (FP1)

FP1 is a 10-pin connector which connects to the front panel switch to control system power on/off and reset.

2.10 H/W Monitor/Watchdog Timer/Infrared

2.10.1 H/W monitor alarm (JOBS1)

This 2-pin header is for enabling/disabling H/W monitor alarm function.

8-10 Closed: Enables hardware monitor alarm (Default)

8-10 Open: Disables hardware monitor alarm

2.10.2 Watchdog timer (JWDT1)

This is for an setting action trigger on the watchdog timer.

4-6 Close: Enable watchdog timer

4-6 Open: No action

2.10.3 Infrared interface (JIR1)

This is a 5-pin header for an infrared device.

2.11 LAN Ports (LAN1 & LAN2)

PCE-3026 is equipped with one or two high-performance 1000 Mbps Ethernet LANs. They are supported by all major network operating systems. The RJ-45 jacks on the rear plate provide convenient connectivity.

Table 2.1: LAN LED Indicators			
LAN Mode	LED1	LED2	
1000Mbps Link On	Green On	On	
1000Mbps Active	Green on	Flash	
1000Mbps Link Off	Off	Off	
100Mbps Link On	Orange On	On	
100Mbps Active	Orange On	Flash	
100Mbps Link Off	Off	Off	
10Mbps Link On	Off	On	
10Mbps Active	Off	Flash	
10Mbps Link Off	Off	Off	

2.12 High Definition Audio Module Interface (HDAUD1)

This HDAUD1 pin header is the connection interface to Advantech's 7.1 channel high definition audio module.

Note! Advantech 7.1 channel high definition audio module ordering information.

P/N: PCA-AUDIO-HDA1E

Figure 2.1 Jumper and connector locations of PCA-AUDIO-HDA1E

2.13 GPIO Header (GPIO1)

Provides 10-Pin pin header for 8-bit Digital I/O usage. Refer to Appendix B for detailed information on the pin assignments and programming guide in Appendix C.

2.14 Case Open Connector (JCASE1)

The 2-pin case open connector is for chassis with a case open sensor. When the case is open, the buzzer on motherboard will beep.

2.15 Front Panel LAN Indicator Connector (LANLED1)

Table 2.2: LAN LED Indicators			
LAN Mode	LED1	LED2	
1000Mbps Link On	Green On	On	
1000Mbps Active	Green on	Flash	
1000Mbps Link Off	Off	Off	
100Mbps Link On	Orange On	On	
100Mbps Active	Orange On	Flash	
100Mbps Link Off	Off	Off	
10Mbps Link On	Off	On	
10Mbps Active	Off	Flash	
10Mbps Link Off	Off	Off	

2.16 Serial ATA Interface (SATA1~SATA3)

PCE-3026 features high performance serial ATA interface (300MB/s) which eases cabling to hard drivers or CD/DVD drivers with long cables.

2.17 LPC Extension Interface (LPC1)

LPC1 is a 14-pin female pinheader for adopting Advantech LPC module, such as PCA-COM232-00A1E, PCA-COM485-00A1E, PCA-TPM-00A1E.

2.18 12/5v power connector (PWR1)

Due to no 5v supply from the golden fingers, please use a power converter: no. 1703040100 to connect from the peripheral power connector on the power supply to PWR1 on board.

Note!

Please note that if PWR1 is not connected, PCE-3026 can not be powered on.

Chapter

3

AMI BIOS Setup

3.1 Introduction

With the AMI BIOS Setup program, you can modify BIOS settings and control the special features of your computer. The Setup program uses a number of menus for making changes and turning the special features on or off. This chapter describes the basic navigation of PCE-3026 setup screens.

Figure 3.1 Setup program initial screen

3.2 Entering Setup

Turn on the computer and during POST startup the BIOS setup program can be triggered by pressing "DEL" or "F2" key.

Note!

If the message disappears before you press the "DEL" or "F2" key, please restart the computer and try again.

3.2.1 Main Setup

When you first enter the BIOS Setup Utility, you will enter the Main setup screen. You can always return to the Main setup screen by selecting the Main tab. There are two Main Setup options. They are described in this section. The Main BIOS Setup screen is shown below.

Figure 3.2 Main setup screen

The Main BIOS setup screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured; options in blue can. The right frame displays the key legend.

Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it.

System Time / System Date

Use this option to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time must be entered in HH:MM:SS format.

3.2.2 Advanced BIOS Features Setup

Select the Advanced tab from PCE-3026 setup screen to enter the Advanced BIOS Setup screen. You can select any of the items in the left frame of the screen, such as CPU Configuration, to go to the sub menu for that item. You can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screen is shown below, and the sub menus are described on the following pages.

Figure 3.3 Advanced BIOS features setup screen

3.2.2.1 Advantech BIOS Update V1.3

Figure 3.4 Advantech BIOS Update V1.3

You can update the BIOS via a USB storage device in FAT32 format.

3.2.2.2 PCI Subsystem Settings

Figure 3.5 PCI Subsystem Settings

PCI 64-bit Resources Handing Above 4G Decoding

Enable/Disable 64-bit capable devices to be decoded in above 4G address space (only if system supports 64-bit PCI decoding).

■ PCI Common Settings

PCI Latency Timer

Value to be programed into PCI Latency Timer Register.

VGA Palette Snoop

Enables/Disables VGA palette registers snooping.

Figure 3.6 PCI Express Settings

■ Link Training Retry

Defines number of retry attempts the software will take to retrain the link if previous training attempts were unsuccessful.

■ Link Training Timeout

Defines number of micro-seconds the software will wait before polling "Link Training" bit in the link status register. Values range from 10 to 1000 uS.

3.2.2.3 ACPI Settings

Figure 3.7 ACPI Settings

Power Type

Choose the item that corresponds with your power supply type: ATX or AT.

■ Enable ACPI AUTO configuration

Enable or disable ACPI auto configuration

■ Enable Hibernation

"Enable or disable" Hibernate (OS/S4 Sleep State). This option may not be effective with some OS.

Lock Legacy Resources

"Enable" or "Disable" Lock Legacy Resources.

PowerOn by Modem

"Enable" or "Disable" PowerOn by Modem

3.2.2.4 Trust Computing

Figure 3.8 Trust Computing

Security Device Support

Enable or disable BIOS security device support. You can purchase Advantech TPM (Trust Platform Module) PCA-TPM-00A1E for your security device.

3.2.2.5 S5 RTC Wake Setting

Figure 3.9 S5 RTC configuration

Wake System with Fixed Time

Enable or disable system wake on alarm event, When enabled, the system will wake on the hr:min:sec as specified.

3.2.2.6 CPU Configuration

Figure 3.10 CPU Configuration

Hyper-threading

This item allows you to enable or disable Intel hyper-threading technology.

Active Processor Core

Use this to select how many processor cores you want to activate when you are using a dual or quad core processor.

Limit CPUID Maximum

Setting this item to [Enable] allows legacy operating systems to boot even without support for CPUs with extended CPUID functions.

Execute Disable Bit

This item specifies the Execute Disable Bit Feature. The settings are Enabled and Disabled. The Optimal and Fail-Safe default setting is Enabled. If Disabled is selected, the BIOS forces the XD feature flag to always return to 0.

Intel Virtualization Technology

This feature is used to enable or disable the Intel Virtualization Technology (IVT) extension. It allows multiple operating systems to run simultaneously on the same system. It does this by creating virtual machines, each running its own x86 operating system.

Hardware Prefetcher

Hardware Prefetcher is a technique that fetches instructions and/or data from memory into the CPU cache memory well before the CPU needs it, so that it can improve the load-to-use latency. You may choose to enable or disable it.

Adjacent Cache Line Prefetch

The Adjacent Cache-Line Prefetch mechanism, like automatic hardware prefetch, operates without programmer intervention. When enabled through the BIOS, two 64-byte cache lines are fetched into a 128-byte sector, regardless of whether the additional cache line has been requested or not. You may choose to enable or disable it.

3.2.2.7 SATA Configuration

Figure 3.11 SATA Configuration

Enable or disable SATA Device

SATA Mode

This can be configured as IDE and AHCI.

Note!

Some OS request to install under AHCI mode so please consult your local OS vendor for more detailed information.

3.2.2.8 Intel Trusted Execution Technology Configuration

Figure 3.12 Intel Trusted Execution Technology Configuration

■ Intel Trusted Execution Technology Configuration

This enables or disables Intel® Trusted Execution Technology.

Note!

Your hardware platform should support Trust Platform Module (TPM 1.2) to enable Intel Trusted Execution Technology. Please also ensure that Intel VT and Intel VT-d are enabled prior to TXT.

3.2.2.9 USB Configuration

Figure 3.13 USB Configuration

■ Legacy USB Support

This is for supporting USB devices under legacy OS such as DOS. When choosing "AUTO", the system will automatically detect if any USB device is plugged into the computer. It will automatically enable USB legacy mode when a USB device is plugged in, and disable USB legacy mode when no USB device is plugged in.

■ EHCI Hand-off

This is a workaround for OS without EHCI hand-off support. The EHCI owner-ship change should be claimed by EHCI driver.

■ USB transfer time-out

Allows you to select the USB transfer time-out value. [1,5,10,20 sec]

Device reset time-out

Allows you to select the USB device reset time-out value. [10, 20, 30, 40 sec]

Device power-up delay

Maximum time the device will take before it properly reports itself to the Host Controller. [Auto] uses default value: for a Root port, it is 100 ms, for a Hub port, the delay is taken from Hub descriptor.

3.2.2.10 Smart Setting

Figure 3.14 Smart Setting

Smart self test

Run SMART Self Test on all HDDs during POST.

3.2.2.11 Super IO Configuration

Figure 3.15 Super IO Configuration

Figure 3.16 Serial Port 1 Configuration

Figure 3.17 Serial Port 2 Configuration

Figure 3.18 Parallel Configuration

■ Serial Port 1 -2 configuration

"Enable or Disable" Serial Port.

Change settings

Select optimal settings for serial port 1 &2

Device mode

Serial port 2 could be selected as [Standard Serial Port Mode], [IrDA 1.0 (HP SIR) Mode], or [ASKIR Mode].

Parallel Port configuration

"Enable or Disable" Parallel Port.

Change settings

Selected the optimal settings for printer port.

Device Mode

Change the printer port mode.

3.2.2.12 H/W Monitor

Figure 3.19 PC Health Status

Smart Fan Mode Configuration

Enable or disable Smart fan

Case Open Warning

Enable/Disable the Chassis Intrusion monitoring function. When enabled and the case is opened, the speaker beeps.

CPU Warning Temperature

Use this to set the CPU warning temperature threshold. When the system reaches the warning temperature, the speaker will beep.

■ ACPI Shutdown Temperature

Use this to set the ACPI shutdown temperature threshold. When the system reaches the shutdown temperature, it will be automatically shut down by ACPI OS to protect the system from overheating damage.

3.2.2.13 CPU PPM Configuration

Figure 3.20 CPU PPM Configuration

■ EIST

Enable/Disable Intel Speedstep.

■ Turbo mode

Enable or disable turbo mode.

■ CPU C3 report

Enable/Disable CPU C3 (ACPI C2) report to OS.

■ CPU C6 report

Enable/Disable CPU C6 (ACPI C2) report to OS.

■ CPU C7 report

Enable/Disable CPU C7 (ACPI C2) report to OS.

ACPI T state

Enable/Disable ACPI T state support.

3.2.3 Chipset

Figure 3.21 Chipset

3.2.3.1 PCH-IO Configuration

Figure 3.22 PCH IO Configuration

3.2.3.1.1PCI Express Configuration

Figure 3.23 PCI Express Configuration

■ Subtractive decode

Enable or disable PCI Express subtractive decode.

■ PCI Express Configuration

PCI Express Root Port 1 to 8 Setting.

3.2.3.1.2USB Configuration

Figure 3.24 USB Configuration

■ EHCI1

Control the USB EHCI (USB2.0) functions. One EHCI controller must always be enabled.

■ EHCI2

Control the USB EHCI(USB2.0) functions. One EHCI controller must always be enabled.

■ USB Ports Pre-port Disable Control

Control each of the USB ports (0-13) disabling.

3.2.3.1.3PCH Azalia Configuration

Figure 3.25 PCH Azalia Configuration

Azalia

Control detection of the Azalia device.

Disable=Azalia will be unconditionally disabled

Enable=Azalia will be unconditionally enabled

Auto=Azalia will be enabled if present, disabled otherwise.

LAN1 Controller

Enable or Disable LAN1 Controller.

LAN 1 Option-ROM

Enable or Disable LAN 1 boot option for legacy network devices.

Wake on LAN1 from S5

Enable or Disable LAN1 to wake the system. (The wake on LAN cannot be disabled if ME is on at Sx state).

LAN2 Controller

Enable or Disable LAN2 Controller.

LAN 2 Option-ROM

Enable or Disable LAN 2 boot option for legacy network devices.

PCIE Wake

Enable or Disable PCIE to wake the system from S5.

High precision Timer

Enable or Disable high precision event timer.

SLP S4 Assertion Width

Select a minimum assertion width of the SLP_S4# signal.

Restore AC Power Loss

Power Off, power On or Last State to restore AC power loss

3.2.3.2 System Agent (SA) Configuration

Figure 3.26 System Agent (SA) Configuration

- VT-d Check to enable VT-d function on MCH.
- BDAT ACPI Table support
 Enable support for the BDAT ACPI table.

Figure 3.27 Graphics Configuration

Primary Display

Select which IGFX/PEG/PCI graphics device should be primary display or select SG for switchable GFX.

Internal Graphics

Keep IGD enabled based on the setup options.

GTT Size

Select the GTT size.

Aperture Size

Select the aperture size.

DVMT Pre-Allocated

Select DVMT5.0 pre-allocated (fixed) graphics memory size, up to 1024 M, used by the internal graphics device.

■ DVMT Total Gfx Mem

Select 128 M, 256 M or MAX DVMT5.0 total graphics memory size used by the internal graphics device.

■ Gfx Low Power Mode

This option is applicable for SFF only.

Primary IGFX Display

Select the video device which will be activated during POST. This has no effect if external graphics are present. Secondary boot display selection will appear based on your selection. VGA modes will be supported only on primary display. Note: In DOS mode, only either VGA or DVI single output are supported.

3.2.3.4 NB PCle Configuration

Figure 3.28 NB PCIe Configuration

■ PEG0-Gen X

Configure auto, Gne1, Gen2, or Gen 3.

■ PEG0 ASPM

Control ASPM support for the PEG: Device 1 Function 0. This has no effect if PEG is not the currently active device.

Enable PEG

Enable/Disable/Auto the PEG.

■ De-emphasis Control

Configure the De-emphasis control on PEG.

3.2.3.5 Memory Configuration

Overview memory detail information.

Figure 3.29 Memory Information

3.2.4 **Boot**

Figure 3.30 Boot

■ Setup Prompt timeout

Number of seconds to wait for setup activation key.

Bootup NumLock State

Select the keyboard Numlock state.

Quiet Boot

Enable/Disable Quiet Boot option.

■ GateA20 Active

Upon request-GA20 can be disabled using BIOS services.

Always-do not allow disabling GA20; this option is useful when any RT code is executed above 1 MB.

Option Rom Messages

Set display mode for option ROM.

■ INT19 Trap Response

BIOS reaction on INT19 trapping by option ROM:

IMMEDATE-execute the trap right away.

POSTPONED-execute the trap during legacy boot.

■ Boot Option Priorities

you can see the information of boot priority option of devices.

3.2.5 Security

Figure 3.31 Security

Select Security Setup from PCE-3026 Setup main BIOS setup menu. All Security Setup options, such as password protection and virus protection are described in this section. To access the sub menu for the following items, select the item and press <Enter>

3.2.6 Save & Exit

Figure 3.32 Save & Exit

Save changes and exit*

When you have completed system configuration, select this option to save your changes, exit BIOS setup and boot into the OS so the new system configuration parameters can take effect.

Discard changes and exit

Select this option to quit Setup without making any permanent changes to the system configuration.

Save changes and Reset

When you have completed system configuration, select this option to save your changes, exit BIOS setup and reboot into the computer so the new system configuration parameters can take effect.

Discard changes and Reset

Select this option to guit Setup and reset computer without making any permanent changes to the system configuration.

Save Changes

Select this option to save your changes.

Discard Changes

Select this option to discard your changes.

Restore Defaults

Select this option to restore BIOS configuration as origin.

Save as User Defaults

Select this option to save user's configuration.

Restore User Defaults

Select this option to restore BIOS to user's configuration.

Launch EFI Shell from file system device

This option allows you to attempt to launch the EFI Shell application (shellx64.efi) from one of the available file system devices.

*When you make some critical changes, the system will still reboot even if you choose "Save changes and exit".

Value-Added Software Services

4.1 Value-Added Software Services

Software API are interface that define the ways in which an application program may request services from libraries and/or operating systems. They provide not only the underlying drivers required but also a rich set of user-friendly, intelligent and integrated interfaces, which speed development, enhance security and offer add-on value. API make Advantech embedded platforms easier and simpler to adopt and operate with customer applications. These API and utilities are for XP only, so if users need a Linux version API and utility, then contact an Advantech representative for support.

4.1.1 Software API

4.1.1.1 Control

GPIO

SMBus

General Purpose Input/Output is a flexible parallel interface that allows a variety of custom connections. allows users to monitor the level of signal input or set the output status to switch on/off the device. Our API also provides Programmable GPIO, which allows developers to dynamically set the GPIO input or output status.

SMBus is the System Management Bus defined by Intel® Corporation in 1995. It is used in personal computers and servers for low-speed system management communications. Today, SMBus is used in all types of embedded systems. The SMBus API allows a developer to interface a Windows XP or CE PC to a downstream embedded system environment and transfer serial messages using the SMBus protocols, allowing multiple simultaneous device control.

4.1.1.2 **Monitor**

Watchdog

A watchdog timer (WDT) is a device that performs a specific operation after a certain period of time if something goes wrong and the system does not recover on its own. A watchdog timer can be programmed to perform a warm boot (restarting the system) after a certain number of seconds.

Hardware Monitor

The Hardware Monitor (HWM) API is a system health supervision API that inspects certain condition indexes, such as fan speed, temperature and voltage.

Chapter

Chipset Software Installation Utility

5.1 Before You Begin

To facilitate the installation of the enhanced display drivers and utility software, read the instructions in this chapter carefully. The drivers for PCE-3026 are located on the software installation CD. The driver in the folder of the driver CD will guide and link you to the utilities and drivers for Windows. Updates are provided via Service Packs from Microsoft®.

Note!

The files on the software installation CD are compressed. Do not attempt to install the drivers by copying the files manually. You must use the supplied SETUP program to install the drivers.

Before you begin, it is important to note that most display drivers need to have the relevant software application already installed in the system prior to installing the enhanced display drivers. In addition, many of the installation procedures assume that you are familiar with both the relevant software applications and operating system commands. Review the relevant operating system commands and the pertinent sections of your application software's user manual before performing the installation.

5.2 Introduction

The Intel® Chipset Device Software installs Windows* INF files to the target system. These files outline to the operating system how to configure the Intel® chipset components in order to ensure that the following features function properly:

- PCle Support
- SATA Storage Support
- USB Support
- Identification of Intel® Chipset Components in
- The Device Manager

5.3 Windows® XP / Windows® 7 Driver Setup

 Insert the driver CD into your system's CD-ROM drive. You can see the driver folder items. Navigate to the "01-Chipset/Windows 7 &XP" folder and click "setup.exe" to complete the installation of the driver.

Note! Wrong driver installation may cause unexpected system instability.

The drivers on this CD support both Windows XP 32-bit /64-bit and Windows 7 32-bit/64-bit.

Chapter

Integrated Graphic Device Setup

6.1 Introduction

The Intel® LGA1155 CPUs have integrated graphics controllers. You need to install the VGA driver to enable this function, which includes the following features:

■ Optimized integrated graphic solution: Intel Graphics Flexible Display Interface supports versatile display options and 32-bit 3D graphics engine. Dual independent display, enhanced display modes for widescreen flat panels for extend, twin, and clone dual display mode, and optimized 3D support deliver an intensive and realistic visual experience.

6.2 Windows XP/Windows 7 Driver Setup

Note!

Before installing this driver, make sure the INF driver has been installed in your system. See Chapter 5 for information on installing the INF driver.

Insert the driver CD into your system's CD-ROM drive. You can see the driver folder items. Navigate to the "02_VGA/your OS/OS type/" folder and click "setup.exe" to complete the installation of the driver. If "00.Dot Net Framework" is required, please check "05-others" folder.

Note! Wrong driver installation may cause unexpected system instability.

Chapter

LAN Configuration

7.1 Introduction

PCE-3026 has dual Gigabit Ethernet LANs via dedicated PCI Express x1 lanes (Intel 82579V (LAN1) and 82583V (LAN2) that offer bandwidth of up to 500 MB/sec, eliminating the bottleneck of network data flow and incorporating Gigabit Ethernet at 1000 Mbps.

7.2 Installation

Note!

7.3 Win XP /Win 7 Driver Setup (LAN)

Insert the driver CD into your system's CD-ROM drive. Navigate to the "04-LAN" folder and click "Autorun.exe" to complete the installation of the driver.

Note! Wrong driver installation may cause unexpected system instability.

Chapter

8

Intel ME

8.1 Introduction

The Intel® ME software components that need to be installed depend on the system's specific hardware and firmware features. The installer detects the system's capabilities and installs the relevant drivers and applications.

8.2 Installation

Insert the driver CD into your system's CD-ROM drive. Navigate to the "05-Others/ME" folder and click "setup.exe" to complete the installation of the driver.

Note! Wrong driver installation may cause unexpected system instability.

Appendix A

Programming the Watchdog Timer

A.1 Introduction

The PCE-3026's watchdog timer can be used to monitor system software operation and take corrective action if the software fails to function within the programmed period. This section describes the operation of the watchdog timer and how to program it.

A.1.1 Watchdog timer overview

The watchdog timer is built in to the NCT6776D super I/O controller. It provides the following user programmable functions:

- Can be enabled and disabled via user's program
- Timer can be set from 1 to 255 seconds or 1 to 255 minutes
- Generates a reset signal if the software fails to reset the timer before time-out

A.1.2 Programming the watchdog timer

The I/O port address of the watchdog timer is 2E (hex) and 2F (hex). 2E (hex) is the address port. 2F (hex) is the data port. You must first write an address value into address port 2E (hex), then write/read data to/from the assigned register through data port 2F (hex).

Table A.1: Watchdog timer registers			
Address of register (2E)	Attribute Read/Write	Value (2F)& description	
87 (hex)		Write this address to I/O address port 2E (hex) twice to unlock the NCT6776D.	
07 (hex)	write	Write 08 (hex) to select register of watchdog timer.	
30 (hex)	write	Write 01 (hex) to enable the function of the watchdog timer. Disabled is set as default.	
F5 (hex)	write	Set seconds or minutes as units for the timer. Write 0 to bit 3: set second as counting unit. [default]. Write 1 to bit 3: set minutes as counting unit. Write 1 to bit 4: Watchdog timer count mode is 1000 times faster. If bit 3 is 0, the count mode is 1/1000 seconds mode. If bit 3 is 1, the count mode is 1/1000 minutes mode.	

F6 (hex)	write	0: stop timer [default] 01~FF (hex): The amount of the count, in seconds or minutes, depends on the value set in register F5 (hex). This number decides how long the watchdog timer waits for strobe before generating an interrupt or reset signal. Writing a new value to this register can reset the timer to count with the new value.
F7 (hex) read/write		Bit 6: Write 1 to enable keyboard to reset the timer, 0 to disable.[default] Bit 5: Write 1 to generate a timeout signal immediately and automatically return to 0. [default=0] Bit 4: Read status of watchdog timer, 1 means timer is "timeout".
AA (hex)		Write this address to I/O port 2E (hex) to lock the NCT6776D.

A.1.3 Example program

Appendix C

Programming the GPIO

C.1 Supported GPIO Register

Below are the detailed descriptions of the GPIO addresses and a programming sample.

C.2 GPIO Registers

Bank	Offset	Description
09h	30h	Write 1 to bit 7 to enable GPIO
07h	E0h	GPIO I/O Register When set to a '1', respective GPIO port is programmed as an input port. When set to a '0', respective GPIO port is programmed as an output port.
07h	E1h	GPIO Data Register If a port is programmed to be an output port, then its respective bit can be read/written. If a port is programmed to be an input port, then its respective bit can only be read.
07h	E2h	GPIO Inversion Register When set to a '1', the incoming/outgoing port value is inverted. When set to a '0', the incoming/outgoing port value is the same as in data register.
