C96 Range

Sizes available: 42"/50"

Model Codes: PS42C96HDX, PS50C96HDX

Main Features

Two High Definition Multimedia Interface (HDMI) connections make your TV a multilimedia centre piece. Connect HD digital devices like disc players, game consoles, satellite dish boxes, HD cameras, camorders and laptops for the ultimate HD experience. HDMI is the best performing interface for displaying a HD source on a HDTV.

The glass construction of a Plasma panel means that reflection can cause problems in certain environments, thus reducing both image brightness and contrast levels. Filterbright uses complimentary coloured coatings on the screen and an additional super black filter to improve light emission from within a Plasma TV, whilst reducing reflection from outside light sources (such as sunlight or lamps). This makes Samsung olasma suitable for use in bright lifting room conditions and even conservatories.

Samsung's new Flat Panel TVs offer you a clearer, more dramatic picture than you've ever experienced. The Dynamic Contrast Ratio of Samsung's Flat Panel TVs is controlled by a variable light behind the panel helping to produce whiter whites and blacker blacks, so you enjoy a crisper image with greater detail.

In fast moving scenes, noise or contour lines can occur on curved lines, such as human faces, because the toning of bright and dark parts of the gradient cannot be processed correctly. To solve this problem, Silhouette Editor estimates the movement and detects the contours, so that it can adjust the facial tone by multi-toning the bright and dark parts on the curve.

In the standard SOHz PAL system, broadcasted TV shows cannot avoid flickering when displayed on TV. To solve this problem, most TV companies use the method of showing the same image twice, making sevoid-100Hz. However, there are still not enough frames for the eye to see a continuous image. As a result, the viewer sees jerky or blurry images on a PDP TV, especially for fast moving images or captions. Samsung's solution to this problem is Smart Frame Plus, which adds 25 extra frames per second from its original source. With this unique technology, moving pictures appear more comfortable and clear, with smoother movement in action scenes. Even the scrolling characters on news broadcasts or programme credits are easier to read.

DNIe™ (Digital Natural Image engine), Samsung LCD TVs revolutionary technology, offers digital perfection in the form of crystal clear images in which even the smallest details are captured. Images appear as close to real life as they can possibly be.
