# 1 INTRODUCTION

---

## 1.0 Overview:-

Whether we like it or not the technological revolution is changing the way we work, live and interact with people and their way of communication.

Mobile Application is on the cutting edge of this revolution.

If you don't want to get by passed by the people on the information highway you had better get up to speed quickly. One way to do this is by having a Mobile Application.

Increasing reliance on Mobile Application will only continue as consumers see mobile apps as the key to help pocket able computers become more central to everyday life

The **SmartSMS** is one such Application to meet the fast revolution of technology

### **Some features are listed below:-**

- 1) Easy to USE
- 2) Attractive User Interface
- 3) Can Send Message Across **Global**
- 4) Message sending in an easy and handy way

## 1.1 New Features

It is estimated that more people use **mobile devices** to access the internet today than those who use a traditional desktop computer

- 1) Send **Multiple** Message.
- 2) **Schedule** the message to multiple numbers.
- 3) **Balance Enquiry**.
- 4) Support of Sending **text, flash** and **other language** messaging.
- 5) Select Contact from **Phone Directories**.
- 6) **Character** and **message** count to user.

## 2 SYSTEM SUMMARY

---

### 2.1 Requirements

**HARDWARE REQUIREMENT:** - 1) Smart Phone  
2) Phone which support **Jar** file.

**SOFTWARE REQUIREMENT:** - 1) Phone with Symbain OS  
2) CLDC: - 1.1  
3) MIDP: - 2.1

**NOTE:** - This application may not work on Samsung phone due to compatibility issues. If Incompatible it will throw an error "INVALID JAR FILE".

### 2.2 User Access Levels

- 1) Mobile Phone with Enable Internet Connection
- 2) Access to mobile phone contacts

**NOTE:** - This Application requires internet connection; it will not work on WIFI Connection

## 3 GETTING STARTED

---

Getting Started section explains how to get SMART SMS install in your device.

### 3.1 Installation

Once the User has downloaded the **JAR** file of the application then need to save the file in the sd/memory card of the phone. The place where user has kept the file just click on the application the application will get started

**NOTE:** - Once you have downloaded and save it on to your phone such image will get display of the

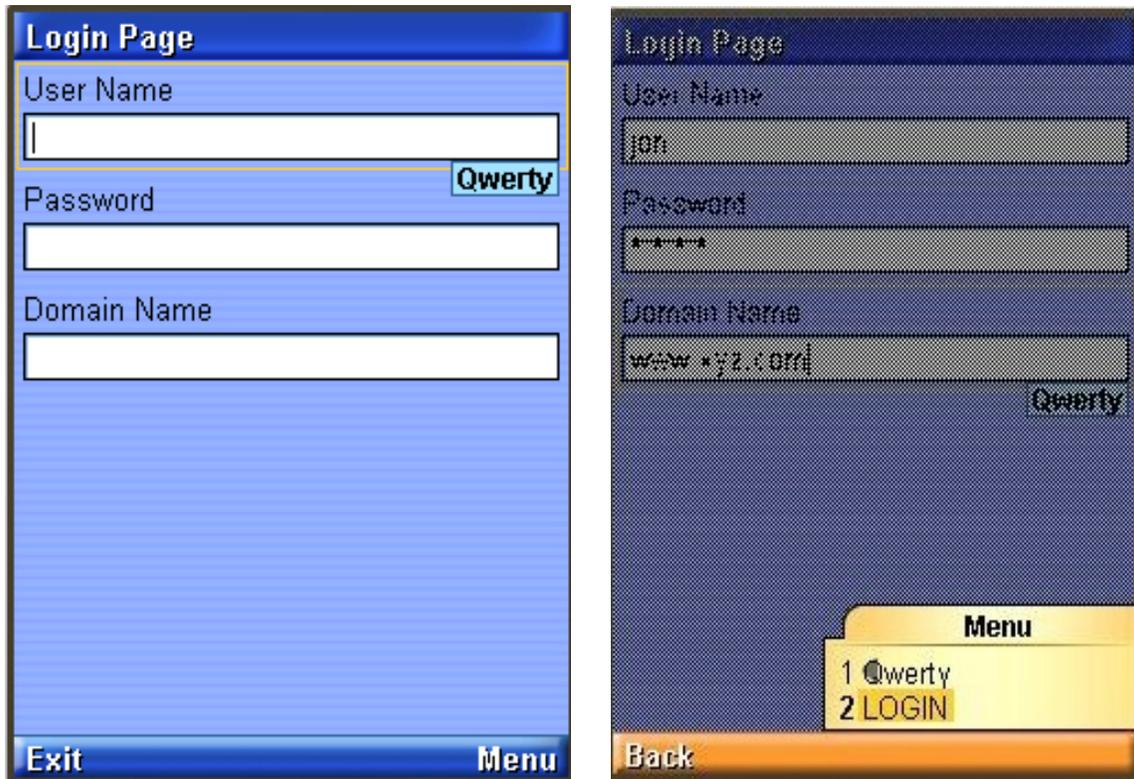

application

If the new version is availed then the application will redirect you to a browser and starts the auto download of the new application on to the phone. The user need to save the updated and replace the previously use application

### 3.2 Logging In

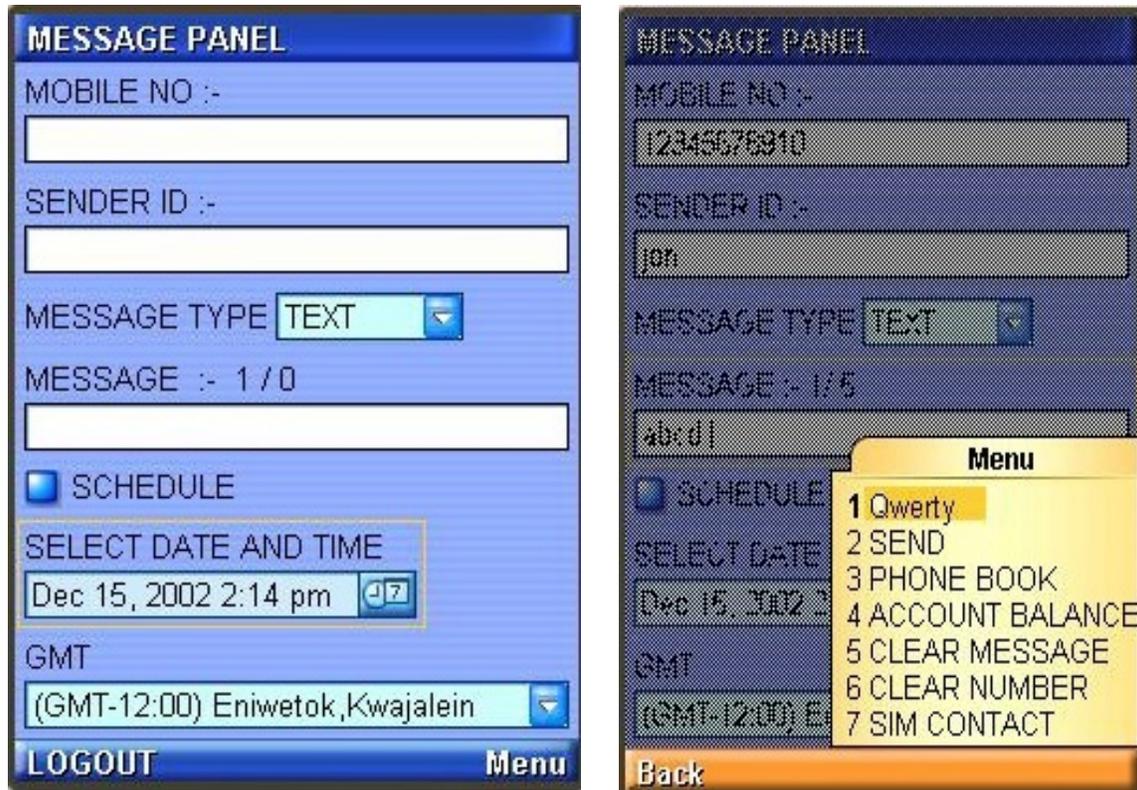

Once the user has click on to the application the following screen will be seen to start with the application

- 1) In the user name, password and domain name column user need to enter the valid details and then click on the **LOGIN**
- 2) If the details are valid then the message will prompt of **SUCCESSFUL LOGIN** or if the detail are invalid the message will prompt **INVALID USER NAME AND PASSWORD**
- 3) If the user has enter invalid domain or connection failure the **ALERT** will prompt **invalid domain or check the net connection**

### 3.3 Using the system

Once the user has **SUCCESSFUL LOGIN** the following screen will appear or messaging

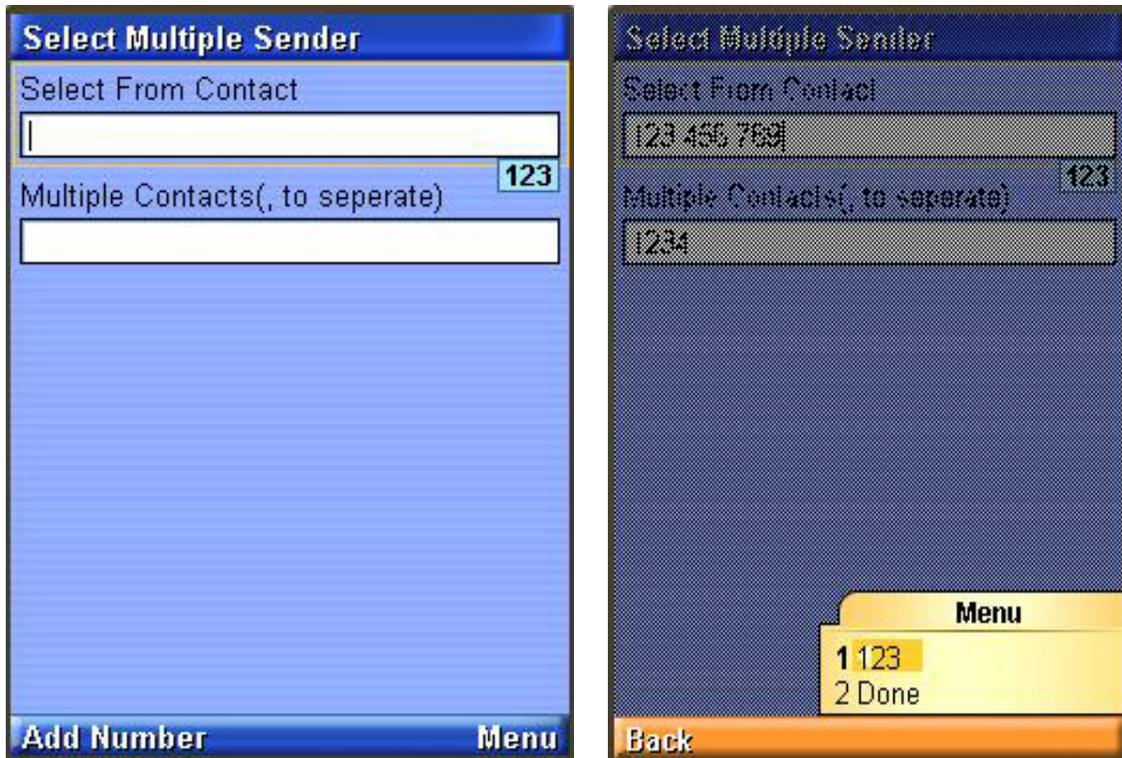

Once the user has entered the **Mobile Number** (with Country Code), **Sender Id**, **Message** and also has selected the message type to be as **TEXT, FLASH, OTHER** (for other language). Then click on **SEND BUTTON**

- 1) The **SEND** is used to send the message
- 2) The **PHONE BOOK** is used to select the contact from the phone directories
- 3) **ACCOUNT BALANCE** is used to get the balance of the account (displayed on another form from the just click on OK to get to the message form)
- 4) **CLEAR MESSAGE / CLEAR NUMBER** is used to clear the message and the contact numbers

- 5) The **SIM CONTACT** is use to select the contact from the sim card of the phone

### SIM CONTACT FORM

Once the use has select the **Sim contact** the following screen will appear

User will be able to see the **SEARCH / ADD CONTACT** (depends on the phone version) menu the user can select the contact from the SIM and get added to the **SELECT FROM CONTACT**

- 1) The **ADD NUMBER** will add the contact to the **MULTIPLE CONTACTS BOX** the user can select one by one contact from the Sim and once the user is done just click on **DONE**
- 2) The **DONE** will redirect you back to the message from the user can check the select contacted in the **MOBILE NUMBER BOX**

## Schedule Message

User can Schedule the Contact just by **checking the schedule check box**. The user can also schedule multiple contacts to schedule. User need to set the **DATE**, **TIME** and the **GMT** for sending the message once done and then just on the **SEND** to send the message

**NOTE:** - In the **PHONE BOOK** user can only select contact store in the phone directory not of sim. If the user intended to get the sim contact simply need to copy the sim contact to phone

**NOTE:** - Depend on the phone the look and feel of the application changes

**NOTE:** - User can Select Sim Contact Only is SYMBAIN Phones or NOKIA PHONES.
