Clearances

Unless otherwise stated the clearances listed below are Minimum distances to combustible materials. **Please Note: A major cause of chimney related fires is due to a failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.**

Clearances to Combustibles		
Dimension	Description	E33
A*	From Unit to Side Walls	8" (203mm)
B	From Unit to Ceiling	47" (1194mm)
C	Minimum Mantel Height	15" (381mm)
D	Maximum Mantel Depth	12" (305mm)
E	Alcove Width	76" (1930mm)

I	Hearth Depth	13" (330mm)

* Alcove side wall must have a minimum of 8" (203mm) clearance on one side.

Combustible Mantels

Because of the extreme heat this fireplace emits, the mantel clearances are critical. Combustible mantel clearances from top of the louvers are shown in the diagram below. Mantel may be installed anywhere in the shaded area or higher.

Note: A non-combustible mantel may be installed at a lower height.

Note: Ensure the paint that is used on the mantel and the facing is "heat resistant" or the paint may discolour.
